RE: Results of Quarterly Groundwater Sampling at 1401 and 1421 Park Avenue
June 30, 1997

Dear Susan:

Enclosed is one copy of the subject report which was prepared for Electro-Coatings by Geraghty & Miller Inc. The next quarterly sampling event is scheduled for October, 1997.

These samples were taken about 2 months after the injections were made and we are feeling good about the results.

Yours very truly,

Judy Garvens
Administrative Manager

SUBJECT: **Quarterly Groundwater Sampling Results, 1401 and 1421 Park Avenue, Emeryville, California.**

Dear Ms. Garvens:

This letter presents the results of the quarterly groundwater sampling activities performed on behalf of Electro-Coatings, Inc. (ECI) at the site referenced above. The scope of work for the quarterly sampling was presented in the Geraghty & Miller letter dated November 13, 1996.

FIELD ACTIVITIES AND LABORATORY ANALYSIS

Groundwater Monitoring Wells MW-3A, MW-4, MW-5, MW-6, MW-12, MW-13, MW-16, and MW-17, were sampled on June 30, 1997 as part of the quarterly groundwater monitoring program. Groundwater Monitoring Wells MW-18 and MW-18A were also sampled in compliance with a requirement for annual sampling. Prior to purging, depth to water and total well depth measurements were obtained from each well. The wells were then purged of at least three casing volumes of water. The well purging was accomplished using an aboveground diaphragm pump. New polyethylene tubing was used for each well. The purged water was monitored for temperature, pH, and specific conductance. A summary of the field data is presented in Table 1. Depth-to-water and groundwater elevation data are presented in Table 2.

Following purging, groundwater samples were collected using a new polyethylene bailer for each well. Groundwater samples for laboratory analysis were collected into appropriate USEPA-approved containers, placed on ice, and transported to Sequoia Analytical Laboratory in Walnut Creek, California, along with chain-of-custody documentation.

RESULTS

Depth to Water and Groundwater Elevations

Depth to water ranged from 3.57 feet below ground surface (MW-6) to 6.84 feet below ground surface (MW-5). A summary of depth to water and groundwater elevations is presented in Table 2. The groundwater elevations and a groundwater contour map are presented in Figure 1. Based on the depth to water data recorded on June 30, 1997, the direction of groundwater flow is toward the west, which is consistent with the previous sampling event (Geraghty & Miller, April 24, 1997).

Laboratory Analytical Results

Chromium Results

Cumulative analytical results for total and hexavalent chromium are summarized in Table 3 and the current results are presented in Figure 2. Results for groundwater Monitoring Wells MW-3A, MW-6, MW-16, MW-17, and MW-18 are consistent with previous sampling events however, decreasing concentrations of total and hexavalent chromium were detected in Wells MW-4, MW-15, MW-12 and MW-13. This decrease is possibly due to the influence of remediation activities which took place between April 10 and 24, 1997. Hexavalent chromium was detected in the water samples collected from the deep groundwater Monitoring Well (MW-3A) at 5.0 micrograms per liter ($\mu\text{g}/\text{L}$), and total chromium was detected at 67 $\mu\text{g}/\text{L}$.

Purgeable Halogenated Volatile Organic Compound Results

The cumulative analytical results for purgeable halogenated volatile organic compounds (HVOCS) are summarized in Table 4. Figure 3 presents the concentrations of trichloroethylene (TCE) and tetrachloroethylene (aka perchloroethylene [PCE]) detected during the April 1997 sampling event. TCE and cis-1,2-dichloroethene continue to be the most frequently detected HVOCS. TCE was the most frequently detected compound, and it was detected at the highest concentrations. The highest concentration of TCE was detected in groundwater Monitoring Well MW-16, to the east of the site.

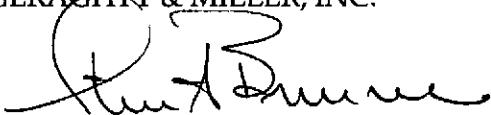

GROUNDWATER REMEDIATION PROGRAM

A groundwater remediation program was initiated at the site during April 1997. A work plan was submitted to the Regional Water Quality Control Board and the Alameda County Department of Environmental Health prior to implementing the program. A description of the remediation program is in the Geraghty & Miller workplan dated March 17, 1997.

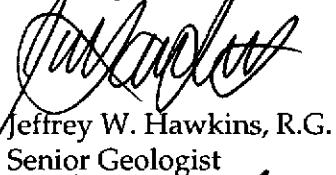

Geraghty & Miller appreciates the opportunity to be of service. If you have any questions regarding this report, please do not hesitate to call.

Sincerely,
GERAGHTY & MILLER, INC.

NR Not Reported

NA Not Analyzed

(a) Analysis by USEPA Method 8010

(b) Denotes well that was part of the pilot study performed during August 1995 through February 1996.

ND() Not detected; laboratory method detection limit in parentheses.

TB-LB Trip blank-laboratory blank.

 $\mu\text{g/L}$ Micrograms per liter.

--- Not sampled.
