RE: Results of Quarterly Groundwater Sampling at 1401 and 1421 Park Avenue  
December 1997

Dear Susan:

Enclosed is one copy of the subject report which was prepared for Electro-Coatings by Arcadis Geraghty & Miller Inc. The next quarterly sampling event is scheduled for April, 1998.

The results are very encouraging. We did another round of injections in late February and therefore the April sampling should show even more progress.

Yours very truly,

  
Judy Garvens  
Administrative Manager

## WESTERN REGION

**Subject:**  
Quarterly Groundwater Sampling Results,  
Electro-Coatings, Inc. Property, 1401 Park Avenue, Emeryville, California and  
1421 Associates Property, 1421 Park Avenue, Emeryville, California.

Dear Ms. Garvens:

Richmond,  
19 February 1998

This letter presents the results of the quarterly groundwater sampling activities performed on behalf of Electro-Coatings, Inc. (ECI) at the sites referenced above (Figure 1) on December 1, 2, and 4, 1997. The scope of work for the quarterly sampling was presented in the ARCADIS Geraghty & Miller letter dated November 13, 1996.

Contact:  
Steven J. Brussee

### Field Activities and Laboratory Analysis

Extension:  
510-233-3200

Groundwater monitoring wells at the sites are monitored each quarter, as proposed by ECI and ARCADIS Geraghty & Miller and agreed to by the Alameda County Health Care Services Agency (ACHCSA).

Prior to purging, depth-to-water and total-well-depth measurements were obtained from each well. The wells were then purged of at least three casing volumes of water. The well purging was accomplished using an aboveground diaphragm pump. New polyethylene tubing was used for each well. Depth-to-water and groundwater elevation data are presented in Table 1.

Following purging, groundwater samples were collected using a new polyethylene bailer for each well. Groundwater samples for laboratory analysis were collected into appropriate USEPA-approved containers, placed on ice, and transported to Sequoia Analytical in Redwood City, California, along with chain-of-custody documentation.

## **Results & Discussion**

### **Depth to Water and Groundwater Elevations**

Depth to water ranged from 3.14 feet below ground surface (MW-6) to 5.50 feet below ground surface (MW-10). Cumulative depth-to-water and groundwater elevations are presented in Table 1. The groundwater elevations and groundwater contours for the December 1997 sampling event are presented in Figure 2. Based on the depth-to-water data recorded on December 1, 1997, the direction of groundwater flow is toward the west, which is consistent with the previous sampling event (September 30, 1997).

### **Laboratory Analytical Results - Chromium**

Cumulative analytical results for hexavalent and total chromium are summarized in Table 2; the current results are presented in Figure 3. Trend analyses of concentrations of hexavalent chromium in on-site and selected off-site wells are presented in Charts 1 and 2, respectively.

Since the implementation of full scale on-site remediation for the 1401 and 1421 Park Avenue sites in April 1997, on-site Monitoring Wells MW-4, MW-9, MW-10, MW-12, MW-13, and MW-14 have shown decreases in concentrations of both hexavalent and total chromium. Detections of hexavalent and trivalent chromium in Monitoring Well MW-3A have remained consistent with the results of previous groundwater sampling events. The detection of hexavalent chromium in MW-11 has increased relative to the results of the previous sampling events. This increased detection is potentially due to soil washing of the vadose zone from rainwater infiltration at the southeast corner of the 1401 Park Avenue building.

Concentrations of hexavalent and total chromium in off-site wells MW-6, MW-16, and MW-17 are consistent with the results of previous groundwater monitoring events.

### **Laboratory Analytical Results - Halogenated Volatile Organic Compounds**

The cumulative analytical results for halogenated volatile organic compounds (HVOCs) are summarized in Table 3; the current results for trichloroethylene (TCE) are presented in Figure 4. Trend analyses of concentrations of TCE in on-site and selected off-site wells are presented in Charts 3 and 4, respectively.

Since the implementation of full scale on-site remediation for the 1401 and 1421 Park Avenue sites in April 1997, on-site Monitoring Wells MW-4, MW-9, MW-10,

## **ARCADIS GERAGHTY & MILLER**

MW-11, MW-12, MW-13, and MW-14 have shown decreases in concentrations of TCE and corresponding increases in detections of TCE biodegradation daughter products.

Concentrations of TCE and biodegradation daughter products in off-site wells are consistent with the results of previous groundwater monitoring events.

### **Groundwater Remediation Program**

A groundwater remediation program was initiated onsite at 1401 and 1421 Park Avenue during April 1997. A description of the remediation program is in the Geraghty & Miller work plan dated March 17, 1997 which was submitted to the Regional Water Quality Control Board and the Alameda County Department of Environmental Health prior to implementing the program.

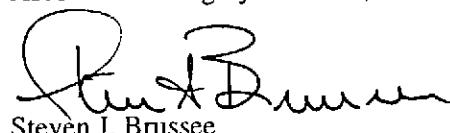

The scope of work for this remediation work plan includes periodic in-situ treatment events for on-site vadose and saturated zones. The first of these events was completed in April 1997. A second event is scheduled for February 1998.

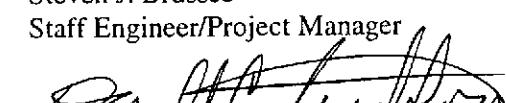

The groundwater remediation program is designed to reduce the concentrations of hexavalent chromium and HVOCS in groundwater through biochemical reduction. The decreases in detected concentrations of hexavalent chromium, total chromium, and TCE, and the corresponding changes in the concentrations of TCE biodegradation daughter products, are consistent with ARCADIS Geraghty & Miller goals for the implementation of remediation at these sites.

ARCADIS Geraghty & Miller appreciates the opportunity to be of service to ECI. If you have any questions regarding this report, please do not hesitate to call.

Sincerely,

ARCADIS Geraghty & Miller, Inc.

**Table 2: Summary of Groundwater Analytical Data  
Total and Hexavalent Chromium**  
Electro-Coatings Inc.  
1401 and 1421 Park Avenue, Emeryville, California

Monitoring Well	Date Sampled	Total Chromium ( $\mu\text{g/L}$ ) (a)	Hexavalent Chromium ( $\mu\text{g/L}$ ) (b)
(a) Analysis by USEPA Method 200.7.			
(b) Analysis by USEPA Method 7196.			
(c) Denotes well that was part of the pilot study performed from August 1995 through February 1996.			
(d) Laboratory indicates results are questionable due to samples being marked "preserved" which were not.			
NA	Not analyzed		
---	Not sampled		
ND()	Not detected; laboratory method detection limit in parentheses		
NL	Monitoring well has not been located		
$\mu\text{g/L}$	Micrograms per liter		

Data from August 1977 through July 1994 taken from groundwater monitoring reports by American Environmental Management Corporation (January 27, 1992, and October 28, 1994). Beginning April 20, 1995, laboratory analyses performed by Sequoia Analytical (Walnut Creek and Redwood City, California).

Monitoring Well	Date Sampled	PCE (µg/L) (a)	TCE (µg/L) (a)	cis-1,2-DCE (µg/L) (a)	trans-1,2-DCE (µg/L) (a)	1,1-DCE (µg/L) (a)	Vinyl Chloride (µg/L) (a)	1,1,1-TCA (µg/L) (a)	1,1-DCA (µg/L) (a)	1,2-DCA (µg/L) (a)	1,2-Dichlorobenzene (µg/L) (a)	Chlorobenzene (µg/L) (a)
-----------------	--------------	-------------------	-------------------	---------------------------	-----------------------------	-----------------------	------------------------------	-------------------------	-----------------------	-----------------------	-----------------------------------	-----------------------------

- (a) Analyzed by USEPA Method 8010.  
 (b) Denotes well that was part of the pilot study performed from August 1995 through February 1996.  
 (c) Laboratory reports 1.5 µg/L chloroform in Well MW-18A.

PCE Tetrachloroethylene

TCE Trichloroethylene

cis-1,2-DCE cis-1,2-Dichloroethylene

trans-1,2-DCE trans-1,2-Dichloroethylene

1,1-DCE 1,1-Dichloroethylene

1,1,1-TCA 1,1,1-Trichloroethane

1,1-DCA 1,1-Dichloroethane

1,2-DCA 1,2-Dichloroethane

ND( ) Not detected; laboratory method detection limit in parentheses

TB-LB Trip blank-laboratory blank

µg/L Micrograms per liter

NR Not reported

NA Not analyzed

NL Monitoring well has not been located.

--- Not sampled

Data from August 1977 through July 1994 taken from groundwater monitoring reports by American Environmental Management Corporation (January 27, 1992, and October 28, 1994).

Beginning April 20, 1995, laboratory analyses performed by Sequoia Analytical (Walnut Creek and Redwood City, California).
