RE: Quarterly Groundwater Monitoring Report, March 2000

Dear Susan,

Enclosed is the above referenced report for sampling done at 1401 & 1421 Park Avenue, Emeryville.

Please call me if you have any questions.

Sincerely,

A handwritten signature in black ink, appearing to read "Jeff Garvens".

Introduction

Groundwater Monitoring

This report presents the results of the March 2000 groundwater monitoring event performed by ARCADIS Geraghty & Miller on behalf of Electro-Coatings, Inc. (ECI) at the former Electro-Coatings, Inc. facility at 1401 Park Avenue and at the 1421 Associates Property at 1421 Park Avenue (the Sites) in Emeryville, California (Figure 1).

Groundwater monitoring wells at the Sites are sampled each quarter, as proposed by ECI and ARCADIS Geraghty & Miller in our April 27, 1996 letter to the Alameda County Health Care Services Agency, Department of Environmental Health (ACDEH).

The data from the groundwater monitoring events are being used to evaluate the concentrations of halogenated volatile organic compounds (HVOCs), chromium (Cr), and hexavalent chromium (Cr[VI]) in groundwater at the site and downgradient from the Sites.

Remediation-in-Progress, Reactive Zone Technology

In 1995 and 1996, ARCADIS Geraghty & Miller conducted a six-month pilot study at the Site to evaluate a patented ARCADIS Geraghty & Miller in-situ Reactive Zone Technology. Based on the successful results of this pilot study, a full scale, on-site implementa-

tion of this remediation technology was initiated in April 1997.

ARCADIS Geraghty & Miller has installed over 100 temporary injection points throughout the Sites. A proprietary mixture has been injected into the temporary injection points during three discrete injection events. The proprietary mixture includes non-petroleum organic compounds, an engineered additive of bio-nutrients, and a microbial inoculant. Three injection events have been completed at the Site to date. The first event was completed in April 1997; the second event was completed in February 1998; a third, partial event was completed in March 1999. The injections for the third event focused on the former source areas near the southern portion of the Sites.

Data from the groundwater monitoring program are being used to evaluate the progress of the on-site remediation in progress. These data are presented and discussed below.

Field Activities and Laboratory Analyses

The groundwater monitoring wells sampled during this groundwater monitoring event include MW-1, MW-3A, MW-3B, MW-4, MW-5, MW-6, MW-8, MW-9, MW-10, MW-12, MW-13, MW-14, MW-15, MW-16, and MW-17 (Figure 1). (MW-18, MW-18A, and MW-20 are sampled semi-annually.)

Former Electro-Coatings,
Inc. Facility
1401 Park Avenue;
1421 Associates Property,
1421 Park Avenue,
Emeryville, California

Prior to sampling, depth-to-water measurements were obtained from each well (Table 1). The wells were then low-flow sampled using an above-ground peristaltic pump. The low-flow sampling procedure was conducted according to the protocol described in the United States Environmental Protection Agency (USEPA) publication entitled *Ground Water Issue, Low-Flow (Minimal Drawdown) Ground-Water Sampling Procedures* (EPA/540/S-95/504).

During the low-flow sampling procedure, new polyethylene tubing was used for each well. The intake of the tubing was placed at approximately the middle of the screened interval for each well. During the sampling process, groundwater was extracted from each well at approximately $\frac{1}{2}$ liter per minute; groundwater quality parameters (pH, specific conductance, temperature, redox, and dissolved oxygen) were monitored during the sampling process (Table 2). Upon stabilization of these groundwater quality parameters, groundwater samples were collected from the effluent port of the low-flow sampling equipment. The samples were collected into USEPA-approved containers, placed on ice, and transported to Sequoia Analytical, a State-certified laboratory, under chain-of-custody documentation, for the analyses indicated in Tables 3 and 4.

Results & Discussion

Overview

The groundwater monitoring wells which are sampled as part of the groundwater monitoring events include both on-site and off-site wells. To date, remediation activities have been implemented only on-site at the 1401 and 1421 Park Avenue sites. The groundwater monitoring wells, as presented in Tables 3 and 4 (analytical results), are grouped by their location (on-site versus off-site).

- Sampled on-site wells include MW-1, MW-3A, MW-3B, MW-4, MW-5, MW-9, MW-10, MW-12, MW-13, and MW-14. Well MW-3A is a deeper well and is screened below the uppermost water-bearing zone.
- Sampled off-site wells (wells not within the on-site remediation area) include MW-6 (the furthest downgradient monitoring well), MW-8, MW-15, MW-16 (the nearest off-site well), and MW-17.

Groundwater Elevations

Groundwater elevations for the shallow-zone wells ranged from 6.57 feet above mean sea level (msl) (MW-6) to 11.37 feet msl (MW-8). Historic and current depth-to-water measurements and calculated groundwater elevations are presented in Table 1.

Former Electro-Coatings,
Inc. Facility
1401 Park Avenue;
1421 Associates Property,
1421 Park Avenue,
Emeryville, California

The groundwater elevations and groundwater contours in the upper water-bearing zone for the March 2000 sampling event are presented in Figure 2. Based on the depth-to-water data recorded on March 16, 2000, the direction of groundwater flow is toward the northwest, which is consistent with the previous sampling event (October 1999).

Results of Remediation Activities

Chromium

Cumulative analytical results for hexavalent and total chromium are summarized in Table 3; the current results are presented in Figure 3. Trend analyses of concentrations of hexavalent chromium in on-site wells are presented in Chart 1.

Since the implementation of full-scale on-site remediation activities for the 1401 and 1421 Park Avenue sites in April 1997, the concentrations of total and hexavalent chromium detected in on-site groundwater monitoring wells (within the remediation area) have decreased dramatically.

- The average concentration of total chromium in these wells has decreased by approximately 99.8% from 65,670 micrograms per liter ($\mu\text{g}/\text{L}$) (March 1996) to 142 $\mu\text{g}/\text{L}$ (March 2000).
 - The average concentration of hexavalent chromium in these
- wells has decreased by greater than 99.9% from 74,350 $\mu\text{g}/\text{L}$ (March 1996) to 25 $\mu\text{g}/\text{L}$ (March 2000). (The 25 $\mu\text{g}/\text{L}$ figure represents one-half of the laboratory method detection limit.)
- All on-site groundwater monitoring wells (MW-3B, MW-4, MW-5, MW-9, MW-10, MW-12, MW-13, and MW-14) are now non-detect for hexavalent chromium (less than 50 $\mu\text{g}/\text{L}$), which is consistent with historic trends.
 - Two on-site groundwater monitoring wells with historic concentrations of hexavalent chromium in excess of 100,000 $\mu\text{g}/\text{L}$ (MW-13 and MW-14) are now non-detect for hexavalent chromium (less than 50.0 $\mu\text{g}/\text{L}$).
 - Upgradient groundwater Monitoring Wells MW-8 and MW-15 are also non-detect for hexavalent chromium (<50 $\mu\text{g}/\text{L}$), which is consistent with historical data. MW-8 and MW-15 have not previously been sampled by ARCADIS Geraghty & Miller, however, they were used as injection points by ARCADIS Geraghty & Miller during the second and third remediation events.
 - The analytical laboratory reported non-detect for hexavalent chromium in off-site, downgradient Groundwater Monitoring Wells MW-16 and MW-17, which is not consistent with historical data.

Former Electro-Coatings,
Inc. Facility
1401 Park Avenue;
1421 Associates Property,
1421 Park Avenue,
Emeryville, California

ter monitoring events will be used to evaluate the validity of the March 2000 data for these wells.

Halogenated Volatile Organic Compounds

The cumulative analytical results for halogenated volatile organic compounds (HVOCS) are summarized in Table 4 and presented in Figure 4. Trend analyses of concentrations of selected HVOCS in on-site wells are presented in Chart 2.

Since the implementation of full scale, on-site remediation for the 1401 and 1421 Park Avenue sites in April 1997, the reported concentrations of HVOCS in groundwater samples obtained from the on-site wells have changed significantly.

- The average concentration of TCE in the on-site groundwater monitoring wells within the remediation area has decreased by approximately 97% from 3,040 µg/L (April 1995) to 78 µg/L (March 2000).
- The average concentrations of biodegradation daughter products (i.e.,

cis-1,2 DCE and vinyl chloride) initially increased the initiation of the remediation program and have subsequently shown decreasing trends.

Detections for HVOCS reported for off-site, downgradient wells MW-16 and MW-17 are consistent with historical data.

Continuing Remediation Activities

The remediation activities implemented at the sites to date were designed to address the presence of hexavalent chromium and HVOCS at the sites.

ARCADIS Geraghty & Miller and ECI are also preparing an off-site remediation plan. This work plan is being prepared pursuant to a meeting between Mark Johnson and Derek Lee of the RWQCB, Judy Garvens of ECI, and Steve Brussee and Gary Keyes of ARCADIS Geraghty & Miller held at the Site on February 3, 1999. We expect to submit the work plan for this proposed off-site remediation work during the early summer of 2000.

(a) Based on three casing volumes.
 Beginning July 1998, low-flow sampling methods were employed; three casing volume calculation is no longer used.

(b) Purged dry.

(c) Represents approximately one casing volume. Equipment problems encountered during sampling.

(μS) micro Siemens

(mV) millivolts

(mg/L) micrograms per liter

NA not applicable

NM not measured

NP not purged

SC specific conductance

- (a) Analysis by USEPA Method 200.7.
- (b) Analysis by USEPA Method 7196.
- (c) Denotes well that was part of the pilot study performed from August 1995 through February 1996.
- (d) Laboratory indicates results are questionable due to samples being marked "preserved" which were not.
- (e) Laboratory reports detection limits raised due to matrix interference.
- (f) Laboratory reports samples were analyzed past EPA recommended holding time.

ND() Not detected; laboratory method detection limit in parentheses

$\mu\text{g/L}$ micrograms per liter

NA Not available

NL Not located by ARCADIS Geraghty & Miller

Data from August 1977 through July 1994 taken from groundwater monitoring reports by American

Environmental Management Corporation (January 27, 1992, and October 28, 1994).

Beginning April 20, 1995, laboratory analyses performed by Sequoia Analytical (Walnut Creek and Redwood City, California).

- (a) Analyzed by USEPA Method 8010.
- (b) Denotes well that was part of the pilot study performed from August 1995 through February 1996.
- (c) Laboratory reports methylene chloride is a suspected laboratory contaminant.
- (d) Laboratory reports reporting limit for the sample has been raised due to the foamy nature.
- (e) Laboratory reports reporting limit has been raised due to the foamy nature of the sample.

PCE	Tetrachloroethylene
TCE	Trichloroethylene
cis-1,2-DCE	cis-1,2-Dichloroethylene
trans-1,2-DCE	trans-1,2-Dichloroethylene
1,1-DCE	1,1-Dichloroethylene
1,1,1-TCA	1,1,1-Trichloroethane
1,1-DCA	1,1-Dichloroethane
1,2-DCA	1,2-Dichloroethane
CBz	Clorobenzene
1,2-DCBz	1,2-Dichlorobenzene
CFM	Chloroform
CA	Chloroethane
ND()	Not detected; laboratory method detection limit in parentheses
TB-LB	Trip blank-laboratory blank
µg/L	Micrograms per liter
—	Not analyzed
NL	Not located
SI	Screened interval

Data from August 1977 through July 1994 taken from groundwater monitoring reports by American Environmental Management Corporation (January 27, 1992, and October 28, 1994).

Beginning April 20, 1995, laboratory analyses performed by Sequoia Analytical (Walnut Creek and Redwood City, California).

Methane, ethane, and ethylene analyses performed by Microseeps (Pittsburgh, Pennsylvania).

Volatile Organic Compounds by EPA Method 8010B - Quality Control

Sequoia Analytical - Morgan Hill

Analyte	Result	Reporting Limit	Units	Spike Level	Source Result	%REC	%REC Limits	RPD	RPD Limit	Notes
Batch 0C21008 - EPA 5030B [P/T]										
Matrix Spike (0C21008-MS1)										
Source: MJC0558-01 Prepared: 03/21/00 Analyzed: 03/23/00										
Chlorobenzene	23.3	0.500	ug/l	25.0	ND	93.2	60-140			
1,1-Dichloroethene	24.7	0.500	"	25.0	ND	98.8	60-140			
Trichloroethene	24.1	0.500	"	25.0	ND	96.4	60-140			
Surrogate: 4-Bromofluorobenzene	9.66		"	10.0		96.6	70-130			
Matrix Spike (0C21008-MS2)										
Source: MJC0641-01 Prepared: 03/24/00 Analyzed: 03/29/00										
Chlorobenzene	20.3	0.500	ug/l	25.0	ND	81.2	60-140			
1,1-Dichloroethene	19.3	0.500	"	25.0	ND	77.2	60-140			
Trichloroethene	47.1	0.500	"	25.0	41.1	24.0	60-140			
Surrogate: 4-Bromofluorobenzene	8.99		"	10.0		89.9	70-130			
Matrix Spike Dup (0C21008-MSD1)										
Source: MJC0558-01 Prepared: 03/21/00 Analyzed: 03/23/00										
Chlorobenzene	21.8	0.500	ug/l	25.0	ND	87.2	60-140	6.65	25	
1,1-Dichloroethene	21.4	0.500	"	25.0	ND	85.6	60-140	14.3	25	
Trichloroethene	21.1	0.500	"	25.0	ND	84.4	60-140	13.3	25	
Surrogate: 4-Bromofluorobenzene	10.9		"	10.0		109	70-130			
Matrix Spike Dup (0C21008-MSD2)										
Source: MJC0641-01 Prepared: 03/24/00 Analyzed: 03/29/00										
Chlorobenzene	20.4	0.500	ug/l	25.0	ND	81.6	60-140	0.491	25	
1,1-Dichloroethene	19.5	0.500	"	25.0	ND	78.0	60-140	1.03	25	
Trichloroethene	45.4	0.500	"	25.0	41.1	17.2	60-140	3.68	25	
Surrogate: 4-Bromofluorobenzene	9.07		"	10.0		90.7	70-130

Notes and Definitions

- Q-02 The spike recovery for this QC sample is outside of established control limits due to sample matrix interference.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
