Rick,

Please review these analyticals (approximately 950 cubic yards) and give some thought to which of the following options would be the better.

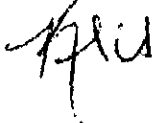

After aeration, class III disposal to BFI Waste Systems in Livermore is an option since they accept diesel and total oil and grease below 1000 ppm, however the question of liability arose.

This leads to the other option, without aeration, which is Laidlaw Environmental (because of the waste oil contamination). As you've mentioned before, all soil contaminated with waste oil should only be disposed of at Laidlaw Environmental (class II or class I).

Also, keep in mind that there will be at least an additional 500 cubic yards of similarly contaminated soil.

Please get in touch with myself or Dick as soon as possible so we can arrange additional analyses for BFI or a characteristic sample for Laidlaw, which ever is necessary.

Thanks,

This site does not need a baseline assessment. We received a NFA letter in 2003 in response to the removal of the UST system.

Good morning Chris.

In reconciling the recent escrow list with our Tier 1 & 2 list, I found one site that is in escrow which was not in either our Tier 1 or 2 lists. Can you tell me if a baseline is needed for Site 256116? Based on core, the site is expected to be issued closure in 2003.....

Thank you!
Tina
