Ron Goloubow & Alan Gibbs (LFR) called to determine whether any comments were received during the public participation period and whether additional oversight is required for PCB removal activities proposed at the site.

No comments were received by ACEH regarding the CAP during the public participation period. As far as I am aware, no additional oversight is required for PCBs as long as cleanup occurs in accordance with the approved CAP with cleanup goals identified, and impacted soil is disposed of to a licensed haz waste facility. Only sidewall samples are proposed for some shallow excavations. A final CAP incorporating and/or addressing ACEH's comments will be prepared. It is recommended that DTSC cleanup goals are adopted for the site per ACEH directive letter.
