

1/29/99 Conv w/ D. Attardo of Cambria

- He could not provide an explanation / correlation for DCO & TPH + MTBE concentrations
- No over-excavation of dispenser areas done
- Agree to create new well close to station building
- Informed Danyk that BP was already doing consultant spring maps for the BP, Shell & Chevron sites. Blaine Tech is sampling all 3 sites. Gave him Risto's address
- ∴ Cambria should proceed w/ utility investigation
- He's going to get more info on H_2O_2 from vendor, make a comparison of H_2O_2 & ORC, use the ORC spreadsheet to estimate amt of O_2 necessary. - Consider either adding O_2 (H_2O_2) into tank backfill well (if present) or advancing a grid of ORC point samplings.

D.A. will provide a wrap addendum + provide comment on my concerns in a draft letter expected to be sent to our office by Feb 19, 1999.
