Phone call with Denis Brown regarding soil vapor sampling from fixed probes. He is reviewing a work plan that includes sampling within buildings but does not want to continue soil vapor sampling with a Suma canister in the parking lot. There is variability in data collected from existing probes in parking lot. ACEH follows LARWQCB guidance that indicates Tedlar bags should not be used. We discussed use of Tedlar bags for sampling locations with high VOCs since accuracy at low levels not needed. Suma canisters to be used for indoor samples.
