**Subject:** **First Quarter 2015 Status Report**  
**1619 1st Street, Livermore, California**  
**Tesoro No. 67076 (Former Beacon 3604); ACEH Case No. RO0434**

Dear Mr. Wickham:

Enclosed please find a copy of the First Quarter 2015 Status Report for the subject site, dated 29 April 2015. This report is submitted by Arctos Environmental on behalf of Tesoro Environmental Resources Company.

Based on my inquiry of the person or persons directly responsible for gathering the information contained in this report, I believe the information was prepared by qualified personnel who properly gathered and evaluated the information, and that the information submitted is, to the best of my knowledge and belief, true, correct, and complete. Please feel free to call me at 253/896-8731 or Scott Stromberg of Arctos Environmental at 510/525-2180 with questions.

Sincerely,

A handwritten signature in blue ink that reads "Kyle Waldron".

Kyle Waldron  
Environmental Remediation Administrator  
Tesoro Companies Inc.

**Subject: First Quarter 2015 Status Report  
1619 1st Street, Livermore, California  
Tesoro No. 67076 (Former Beacon 3604); ACEH Case No. RO0434**

Dear Mr. Wickham:

Arctos Environmental (Arctos), on behalf of Tesoro Environmental Resources Company (Tesoro), has prepared this letter report summarizing project tasks completed during the first quarter 2015 at the subject site (Figure 1).

### **Executive Summary**

A quarterly groundwater monitoring event was conducted from 20 to 21 January 2015. On average, there was an approximately 11-foot increase in water levels since the fourth quarter 2014. The highest onsite petroleum hydrocarbon concentrations were detected in groundwater at wells MW-2 and DW-8, located in the western portion of the site adjacent to the dispenser islands and underground storage tanks (USTs), respectively. The highest offsite petroleum hydrocarbon concentrations were detected in groundwater at wells DW-2 and DW-5, located northwest of the intersection of 1st Street and South P Street.

During the first quarter 2015, Arctos operated the soil vapor extraction (SVE) system from 1 January to 19 February 2015. Influent vapor concentrations decreased below laboratory detection levels and the mass removal rate through volatilization was less than 1 pound per day (lb/day). An estimated total of 5 pounds of petroleum hydrocarbons were removed through volatilization and an estimated 490 pounds were removed through biodegradation. The oxygen injection system remained shut off during the first quarter 2015.

Based on a project meeting conducted with Alameda County Environmental Health (ACEH) on 26 February 2015, Arctos recommends (1) discontinuing the increased sampling frequency and additional analytical parameters sampled for in situ chemical

oxidation (ISCO) pilot test monitoring and (2) resuming semiannual monitoring with quarterly monitoring of selected wells. Additionally, Arctos recommends restarting oxygen injection to remediate dissolved-phase hydrocarbons on site.

## **Site Background**

The site description and background are included in Arctos's "In Situ Chemical Oxidation (ISCO) Pilot Test Report" dated 16 March 2012 (Arctos, 2012).

## **Groundwater Monitoring**

Arctos's subcontractor, Confluence Environmental, of Sacramento, California, performed a quarterly groundwater monitoring event from 20 to 21 January 2015. Confluence sampled groundwater within the saturated zone at wells MW-1 through MW-5, MW-7, DW-1 through DW-9, IP-1, IP-5, and IP-8 through IP-10. Samples were unable to be collected from 10 wells because of low water levels. Groundwater monitoring was performed in accordance with the guidelines of the California Underground Storage Tank Regulations, Title 23, Division 3, Chapter 16, California Code of Regulations. Groundwater sampling quality assurance and quality control (QA/QC) procedures are in Attachment A. Field data sheets are in Attachment B.

## **Analytical Program**

Groundwater samples collected from wells MW-1, MW-3 through MW-5, and DW-4 were analyzed in accordance with the analytical plan in Attachment A. Groundwater samples collected from the remaining wells were tested for additional analytes in accordance with the expanded ISCO pilot test work plan (Arctos, 2013).

## **Groundwater Results**

Groundwater elevations were approximately 419 to 433 feet above mean sea level (MSL; 41 to 50 feet below ground surface [bgs]). Water levels increased an average of 11 feet compared to the previous quarter and were an average of 11 feet lower than water levels in the first quarter 2014 (Table 1). Arctos evaluated the water level data and determined that the general direction of groundwater flow was toward the northwest with an estimated gradient of 0.02 (1 foot/43 feet; Figure 2). The gradient was consistent with historical data collected since 1993 (Attachment C).

During the first quarter 2015, the highest onsite dissolved-phase concentrations of total petroleum hydrocarbons as gasoline (TPHg), benzene, and methyl tert-butyl ether (MTBE) were detected at wells MW-2 and DW-8, located in the western portion of the site adjacent to the dispenser islands and USTs, respectively. The highest offsite dissolved-

phase concentrations of TPHg, benzene, and MTBE were detected at wells DW-2 and DW-5, located downgradient of the site in the offsite parking lot. All offsite benzene concentrations were below the Environmental Screening Level (ESL) of 1,800 micrograms per liter ( $\mu\text{g/l}$ ) established by the San Francisco Regional Water Quality Control Board for evaluation of potential vapor intrusion concerns. The table below summarizes the maximum hydrocarbon concentrations detected on and off site.

Hydrocarbon Compound	Maximum Onsite Concentration <sup>(a)</sup> ( $\mu\text{g/l}$ )	Maximum Offsite Concentration <sup>(a)</sup> ( $\mu\text{g/l}$ )
TPHg	38,000 (DW-8)	26,000 (DW-5)
Benzene	2,800 (DW-8)	260 (DW-2)
MTBE	80 (MW-2)	100 (DW-2)

(a) Dissolved-phase petroleum hydrocarbons analyzed by Environmental Protection Agency (EPA) Method 8260B and reported in  $\mu\text{g/l}$ .

In general, hydrocarbon concentrations at onsite source area wells decreased as a result of SVE and oxygen injection system operation from 2010 to 2012. Concentrations at offsite wells remained relatively stable during this period. After ISCO injections were conducted on and off site during the second and third quarters 2013, hydrocarbon concentrations increased at on- and offsite wells as a result of hydrocarbon desorption from the injection chemicals' surfactant properties. Arctos evaluated the monitoring results and determined that concentrations are generally stable or decreasing at on- and offsite wells since the expanded ISCO pilot test. This is likely attributable to hydrocarbon mass resorbing onto soil as equilibrium conditions return. The table below summarizes TPHg concentrations at selected on- and offsite wells before and after remediation events were conducted.

Well	TPHg Concentration <sup>(a)</sup> ( $\mu\text{g/l}$ )			
	Before SVE and O2 (May 2010)	After SVE and O2 and Before ISCO (April 2013)	After ISCO (June or August 2013)	Current (January 2015)
<i>Onsite</i>				
MW-2	26,000	430	11,000	14,000
DW-8	NA <sup>(b)</sup>	5,900	55,000	38,000
<i>Offsite</i>				
DW-2	2,300	4,500	8,300	5,700
DW-5	2,100	3,000	120,000	26,000

(a) Dissolved-phase TPHg analyzed by EPA Method 8260B and reported in  $\mu\text{g/l}$ .

(b) NA – Not applicable. Well DW-8 was installed in April 2011.

Groundwater analytical results are summarized in Tables 2 and 3. Figures 3, 4, and 5 show isoconcentration contours for TPHg, benzene, and MTBE, respectively. Historical analytical results are in Attachment D, and laboratory reports and chain-of-custody forms are in Attachment E.

### **ISCO Pilot Test Monitoring**

Arctos conducted an ISCO pilot test at onsite well IP-9 during the fourth quarter 2011 and an expanded ISCO pilot test at onsite wells IP-1, IP-2, IP-3, IP-8, and IP-9 and offsite wells IP-11 through IP-17 during the second and third quarters 2013. Arctos evaluated changes in groundwater chemistry and hydrocarbon concentrations and determined that the RegenOx™ chemical oxidant was effective at desorbing petroleum hydrocarbons from soil and destroying hydrocarbons in groundwater.

The RegenOx™ oxidant complex can cause naturally-occurring, insoluble trivalent chromium to convert to soluble hexavalent chromium, resulting in an increase in hexavalent chromium concentrations in groundwater. ISCO pilot test monitoring has indicated that hexavalent chromium has been detected at monitoring wells MW-8, MW-10, MW-11, DW-8, and injection wells IP-1, IP-8, and IP-9. During the first quarter 2015, hexavalent chromium was only detected at injection well IP-9 at a concentration of 58 µg/l, exceeding the Maximum Contaminant Level (MCL) of 10 µg/l. In general, hexavalent chromium was detected above the MCL at injection or adjacent monitoring wells shortly after injection events and subsequently decreased to non-detect levels. Hexavalent chromium continues to be detected at injection well IP-9, which received the highest volume of oxidant, but overall concentrations appear to be decreasing.

ISCO pilot test groundwater monitoring results for petroleum hydrocarbons and general chemistry are summarized in Tables 4 and 5, respectively. Table 5 includes highlighting for all recent and historical sample results exceeding primary or secondary MCLs. In general, the analytical parameters detected above MCLs in the first quarter 2015 were sulfate, total and ferrous iron, and total dissolved solids (TDS). Arsenic was detected above the MCL of 0.01 milligram per liter (mg/l) at wells IP-1, IP-8, IP-9, and DW-8, ranging from 0.015 to 0.31 mg/l at wells DW-8 and IP-9, respectively. As stated above, hexavalent chromium was detected above the MCL at well IP-9. Iron and TDS concentrations appear to be naturally elevated in groundwater in the vicinity of the site based on MCL exceedances in baseline groundwater samples collected before the ISCO pilot test. At the farthest downgradient monitoring well DW-9, total and ferrous iron and TDS were detected above MCLs but consistent with concentrations before ISCO events were conducted.

## Source Area Remediation

### SVE System

Arctos operated the SVE system from June 2010 to November 2012. The system was shut down in November 2012 and remained off through the second quarter 2014. During this period of operation, the total hydrocarbon mass removed by the SVE system was estimated to be 38,000 pounds or approximately 5,900 gallons (at a density of 6.5 pounds per gallon).

During the third quarter 2014, water levels on site decreased to the lowest levels observed since 2009. Arctos restarted the SVE system on 8 July 2014 to remediate hydrocarbon-impacted, vadose zone soil that was not exposed during previous SVE system operation. The system was connected to onsite wells MW-1, MW-11, TP-1, TP-2, and VW-2. Wells MW-11 and VW-2 were shut down during the fourth quarter 2014 because of low wellhead photoionization detector (PID) readings.

During the first quarter 2015, the system operated from 1 January to 19 February 2015. Arctos shut down well TP-2 during the reporting period because of low wellhead PID readings. The SVE system was shut down on 19 February 2015 due to low influent concentrations.

Arctos monitored the SVE system influent bimonthly with a PID and by laboratory analysis of soil gas samples. The SVE system was monitored to document and optimize hydrocarbon mass removal from the subsurface. Influent hydrocarbon concentrations increased from start-up until November 2014, then decreased corresponding to increasing water levels. Water levels on site increased by approximately 11 feet between the fourth quarter 2014 and first quarter 2015, and influent hydrocarbon concentrations decreased below laboratory detection levels. Table 6 summarizes the laboratory analytical results for influent SVE system samples.

The average mass removal rate by volatilization during the first quarter 2015 was approximately 0.1 lb/day, corresponding to an estimated total of 5 pounds removed during the reporting period. The percentage of carbon dioxide in soil vapor decreased from approximately 0.7 to less than 0.5 percent during the operating period, indicative of decreased biodegradation with decreasing concentrations of petroleum hydrocarbons. The average mass removal rate by biodegradation during the first quarter 2015 was approximately 10 lb/day, corresponding to an estimated total of 490 pounds removed during the reporting period. The total hydrocarbon mass removed by the system to date is estimated to be 47,000 pounds or approximately 7,200 gallons (at a density of 6.5 pounds per gallon). Table 7 summarizes mass removal rates by volatilization and biodegradation.

Figures 6, 7, and 8 show graphs of soil vapor influent concentrations, mass removal by volatilization, and mass removal by biodegradation, respectively. Soil vapor sampling procedures are in Attachment C.

Oxygen Injection System

Arctos operated the oxygen injection system from October 2010 to March 2013. Arctos shut down the system on 28 March 2013 in preparation for the expanded ISCO pilot test and it remained shut off during the first quarter 2015.

Between May 2010 and April 2013, dissolved-phase hydrocarbon concentrations at source area wells MW-2 and DW-1 decreased by over 98 percent, indicating the oxygen injection system was effective at degrading hydrocarbons in groundwater. As stated above, concentrations at these wells have subsequently increased as a result of desorption from ISCO activities. The following table summarizes changes in hydrocarbon concentrations observed at these wells.

Well	Before O2 Injection (May 2010)	After O2 Injection and Before ISCO (April 2013)	Percent Reduction
<i>TPHg Concentration<sup>(a)</sup> (<math>\mu\text{g/l}</math>)</i>			
MW-2	26,000	430	99
DW-1	1,800	ND<50 <sup>(b)</sup>	99
<i>Benzene Concentration<sup>(a)</sup> (<math>\mu\text{g/l}</math>)</i>			
MW-2	3,100	10	99
DW-1	160	ND<0.5	99 <sup>(c)</sup>
<i>MTBE Concentration<sup>(a)</sup> (<math>\mu\text{g/l}</math>)</i>			
MW-2	530	13	98
DW-1	21	ND<0.5	99 <sup>(c)</sup>

(a) Dissolved-phase petroleum hydrocarbons analyzed by EPA Method 8260B and reported in  $\mu\text{g/l}$ .

(b) ND – Not detected at reporting limit listed.

(c) Half of reporting limit used to calculate percent reduction.

Based on the observed decreases in source area hydrocarbon concentrations as a result of previous oxygen injection, Arctos is proposing to restart oxygen injection at the site. Arctos's approved Interim Remedial Action Plan (IRAP) included specifications for a system capable of delivering air up to 15 standard cubic feet per hour (scfh) at over 90 percent by volume oxygen concentration. Arctos is proposing to replace the former system with a system capable of delivering up to 45 scfh at over 90 percent by volume oxygen concentration.

## Groundwater Sampling Frequency

In a 23 July 2009 letter, ACEH approved semiannual groundwater sampling at the site (ACEH, 2009). Select wells were monitored quarterly to assess the performance of the SVE and oxygen injection systems. In addition, groundwater monitoring associated with the expanded ISCO pilot test included increased monitoring frequency and analysis of additional parameters. Arctos proposes to discontinue the additional frequency and analytical parameters for ISCO monitoring. After the oxygen injection system is restarted, Arctos proposes groundwater sampling according the following program:

Well Designation	Location	Sampling Frequency
MW-1	Upgradient	Quarterly
MW-2, MW-11, DW-1, TP-1, TP-2, and VW-2	Source area	
MW-6, MW-12, DW-2, DW-3, DW-5, DW-6, DW-7, DW-8, and DW-9	Downgradient	
MW-3, MW-4, and VW-3	Upgradient	Semiannually (2nd and 4th quarters)
MW-5 and MW-7	Cross gradient	
MW-8, MW-9, MW-10, and DW-4	Downgradient	
IP-1 through IP-10	On site	Annually (2nd quarter)

## Conclusions

Results of groundwater sampling and SVE operation and maintenance indicate the following conclusions:

1. Water levels increased approximately 11 feet during the first quarter 2015.
2. Increasing water levels submerged sorbed hydrocarbons and decreased SVE influent vapor-phase concentrations. As a result, Arctos shut down the SVE system on 19 February 2015.
3. On- and offsite dissolved-phase hydrocarbon concentrations have decreased or remained stable since the expanded ISCO pilot test.

## Recommendations

Based on the activities completed during this quarter and a meeting with ACEH conducted on 26 February 2015, Arctos recommends the following tasks during the second quarter 2015 and beyond:

- Discontinue the increased groundwater monitoring sampling frequency and additional analytical parameters sampled for expanded ISCO pilot test monitoring
- Restart an oxygen injection system with increased oxygen production capacity (up to 45 scfh)
- Resume semiannual groundwater monitoring with quarterly monitoring of selected wells to assess the oxygen injection system performance in accordance with the groundwater monitoring program approved in the 2008 IRAP (Arctos, 2008).

If you have questions or comments, please call Scott Stromberg or Mike Purchase at 510/525-2180.

Very truly yours,

ARCTOS ENVIRONMENTAL

- (a) Elevation of PVC well casing (north edge) surveyed relative to mean sea level (MSL). Wells were surveyed by Cross Land Surveying, Inc., per AB 2886 requirements. Benchmark K2-741, elevation is 467.835 feet above MSL.
- (b) Water Table Elevation = (Casing Elevation - Depth to Water).
- (c) Depth of groundwater assumed to be below screened interval; well had 6 inches or less of water.

(a) Total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene, xylenes, methyl tert-butyl ether (MTBE), di-isopropyl ether (DIPE), ethyl tert-butyl ether (ETBE), tert-amyl methyl ether (TAME), tert-butyl alcohol (TBA), methanol, ethanol, 1,2-dichloroethane (1,2-DCA), and 1,2-dibromoethane (EDB) analyzed by EPA Method 8260; reported in micrograms per liter ( $\mu\text{g/l}$ ).

(b) ND - Not detected at the reporting limit listed.

(c) NS - Not sampled.

(a) Total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene, xylenes, methyl tert-butyl ether (MTBE), di-isopropyl ether (DIPE), ethyl tert-butyl ether (ETBE), tert-amyl methyl ether (TAME), tert-butyl alcohol (TBA), methanol, ethanol, 1,2-dichloroethane (1,2-DCA), and 1,2-dibromoethane (EDB) analyzed by EPA Method 8260; reported in micrograms per liter ( $\mu\text{g/l}$ ).

(b) ND - Not detected at the reporting limit listed.

(c) Baseline remediation system values.

(d) NS - Not sampled.

(e) Primarily compounds not found in typical gasoline.

(a) Total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene, xylenes, methyl tert-butyl ether (MTBE), di-isopropyl ether (DIPE), ethyl tert-butyl ether (ETBE), tert-amyl methyl ether (TAME), tert-butyl alcohol (TBA), methanol, ethanol, 1,2-dichloroethane (1,2-DCA), and 1,2-dibromoethane (EDB) analyzed by EPA Method 8260; reported in micrograms per liter ( $\mu\text{g/l}$ ).

(b) ND - Not detected at the reporting limit listed.

(c) NS - Not sampled.

- (a) Nitrate and sulfate analyzed by EPA Method 300.0; reported in milligrams per liter (mg/l).
- (b) Arsenic, chromium, iron, manganese, and sodium analyzed by EPA Method 6010B; reported in mg/l.
- (c) Hexavalent chromium (Hex Chrome) analyzed by EPA Method 7199; reported in micrograms per liter (µg/l).
- (d) Ferrous Iron (Fe (2+)) analyzed by Standard Method 3500-Fe D; reported in mg/l.
- (e) Carbon dioxide (CO<sub>2</sub>) and methane (CH<sub>4</sub>) analyzed by EPA Method RSK-175M; reported in µg/l.
- (f) Total alkalinity as CaCO<sub>3</sub> analyzed by Standard Method 2320B; reported in mg/l.
- (g) Total dissolved solids (TDS) analyzed by Standard Method 2540 C; reported in mg/l.
- (h) California primary maximum contaminant limit (MCL) in drinking water, reported in same units as analyte listed, left blank where no MCL established.
- (i) California secondary maximum contaminant limit (MCL) in drinking water, reported in same units as analyte listed, left blank where no MCL established.
- (j) MCL does not exist for ferrous iron; MCL for total iron used.
- (k) ND - Not detected at the reporting limit listed.
- (l) CO<sub>2</sub> analyzed by Standard Method 4500 C; reported in mg/l.
- (m) NS - Not sampled.

- (a) Total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene, xylenes, and methyl tert-butyl ether (MTBE), analyzed by EPA Method 8260; reported in parts per million by volume (ppmv).
- (b) Fixed gases analyzed by Method ASTM D-1946; reported in percent (%).
- (c) "--" - Not analyzed.
- (d) ND - Not detected at the reporting limit listed.
- (e) SVE manifold influent vapor sample damaged during shipping to lab. Results of total well inlet and recirculation air used for data analysis.

TESORO - LIVERMORE, 67076**

Influent Number Sample	Sample Date	Hours of Operation (hours)	Days of Operation (Days)	TPHg Concentration (ppmv) <sup>(a)</sup>	Differential Pressure (in. wc) <sup>(b)</sup>	Temp (°F) <sup>(c)</sup>	Vacuum (in. Hg) <sup>(d)</sup>	Standard Flow (scfm) <sup>(e)</sup>	Volatilization	Biological	
									Mass Removal Rate (lbs/day) <sup>(f)</sup>	Concentration of Carbon Dioxide (%) <sup>(g)</sup>	Mass Removal Rate (lbs/day)
Operating on wells MW-1, TP-1											
90	2/5/15	22,692	945	11	--	59	3.0	27	0.1	0.65	8.6
91	2/19/15	23,028	959	ND<5	--	58	3.0	35	NA	ND<0.5	NA

(a) Total petroleum hydrocarbons as gasoline (TPHg) analyzed by EPA Method 8260; reported in parts per million by volume (ppmv).

(b) Differential pressure reported in inches of water column (in. wc).

(c) Temperature reported in degrees Fahrenheit (°F).

(d) Vacuum reported in inches of mercury (in. Hg).

(e) Standard flow reported in standard cubic feet per minute (scfm).

(f) Mass removal rate reported in pounds per day (lbs/day).

(g) Carbon dioxide analyzed by ASTM Method D-1946; reported in percent (%).

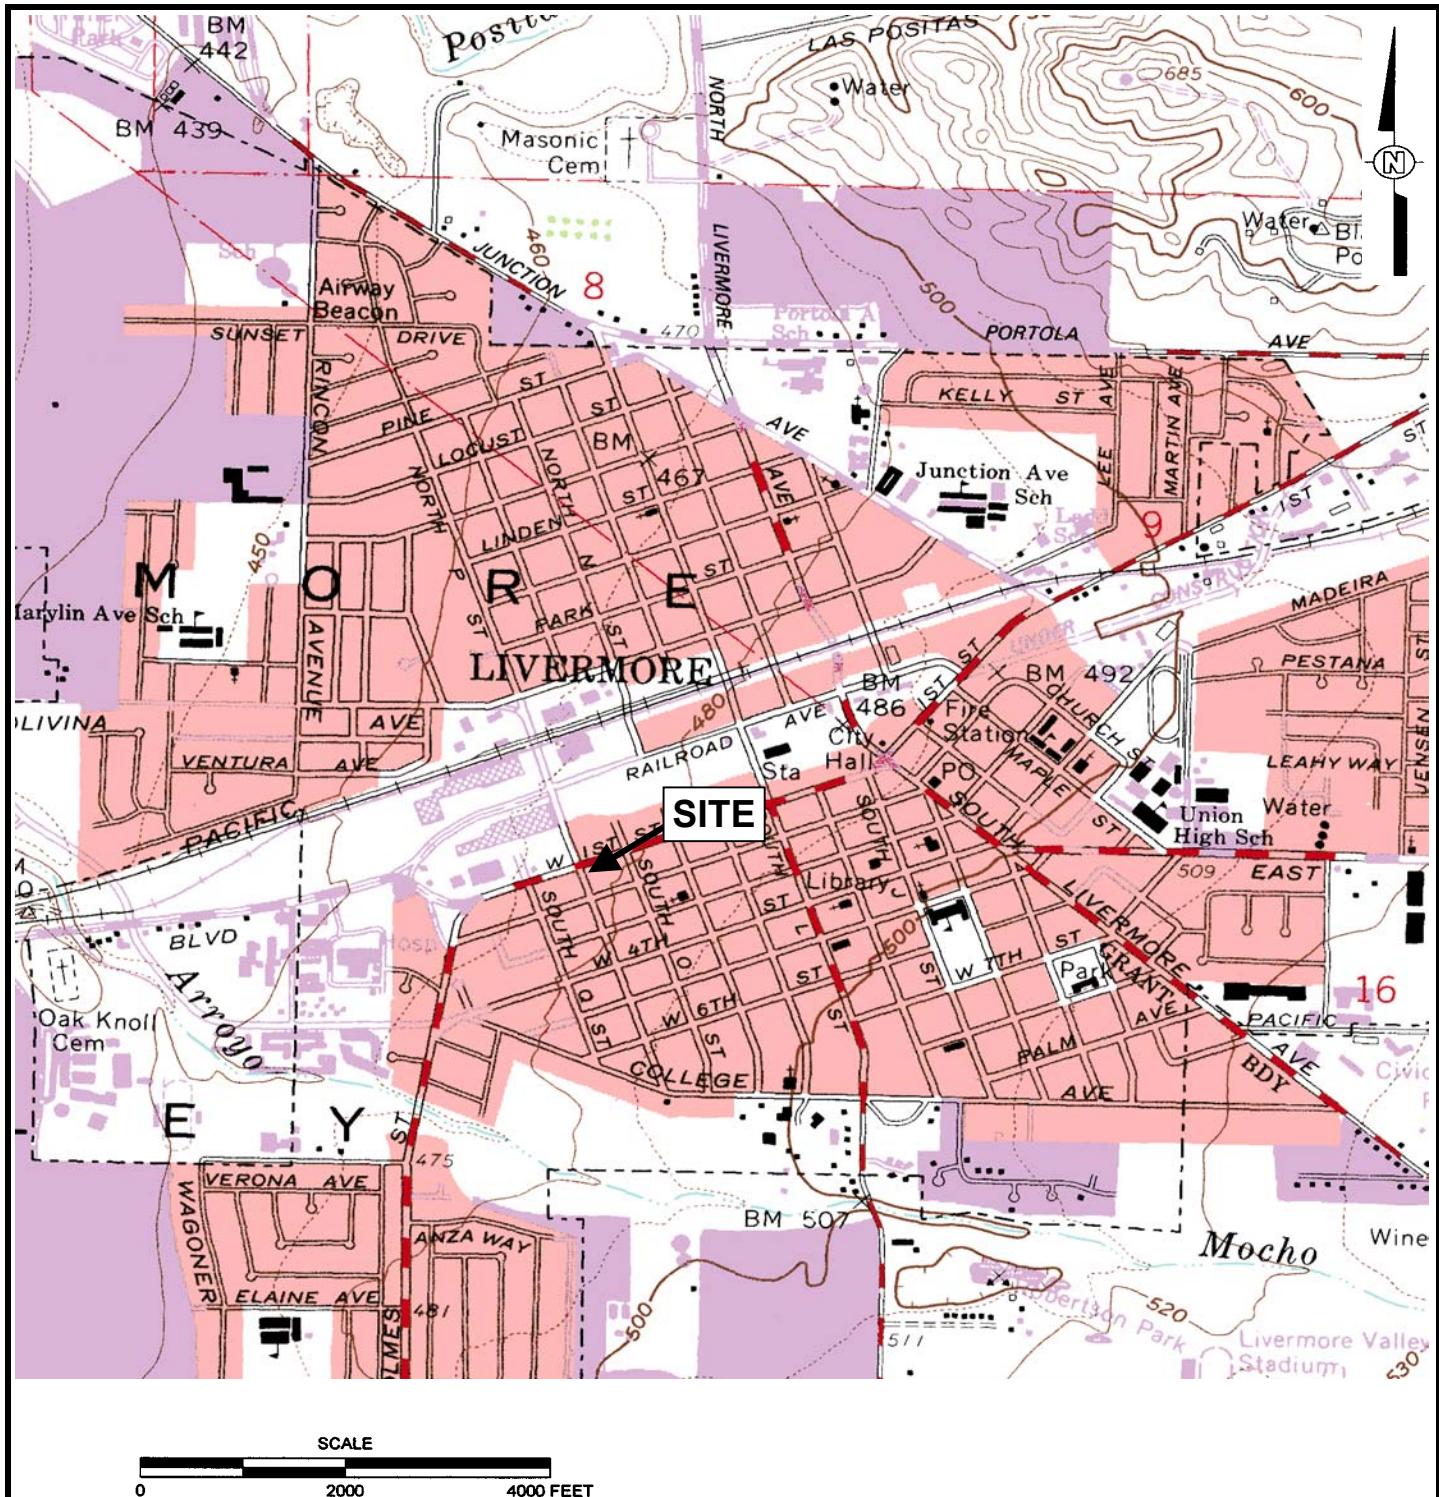

(h) "--" - Not sampled, analyzed, or collected.

(i) An average flow rate was used due to inaccurate system parameter readings.

(j) NA - Not applicable.

(k) Flow measurements taken with a TSI anemometer for better accuracy at low flow rates.

(l) ND - Not detected at the reporting limit listed.

**GROUNDWATER SAMPLING QA/QC PROCEDURES**

---

**Monitoring Plan**

In accordance with the California State Water Resources Control Board's (SWRCB) Resolution No. 2009-0042, referenced in Alameda County Environmental Health's 23 July 2009 letter to Tesoro Environmental Resources Company (Tesoro), Arctos Environmental (Arctos) proposed to reduce the monitoring and sampling frequency to semiannually in the second quarter 2009 status report. Select wells will continue to be monitored quarterly to assess the effectiveness of the groundwater remediation system according to the following groundwater monitoring plan:

Well Designation	Location	Sampling Frequency
MW-1	Upgradient	
MW-2, MW-11, DW-1, TP-1, TP-2, and VW-2	Source area	Quarterly
MW-6, MW-12, DW-2, DW-3, DW-5, DW-6, DW-7, DW-8, and DW-9	Downgradient	
MW-3, MW-4, and VW-3	Upgradient	Semiannually (2nd and 4th quarters)
MW-5 and MW-7	Cross gradient	
MW-8, MW-9, MW-10, and DW-4	Downgradient	
IP-1 through IP-10	On site	Annually (2nd quarter)

**Analytical Plan**

The groundwater samples were analyzed by Kiff Analytical LLC, a State-certified laboratory in Davis, California, for total petroleum hydrocarbons as gasoline; benzene, toluene, ethylbenzene, and total xylenes; methyl tert-butyl ether; and other oxygenates using Environmental Protection Agency (EPA) Method 8260B.

Arctos, as Tesoro's Authorized Responsible Party for the site, also electronically submitted the groundwater monitoring results to the SWRCB. The data were submitted in the State-mandated Electronic Data Format, in accordance with Assembly Bill 2886 requirements for underground storage tank sites in California.

**Purge-and-Bail Sampling Procedures**

The depth to groundwater and total well depth were measured before sampling using an electronic water well sounder. The sequence of well sampling depended on the level of contamination in each well, if known, and was determined before sampling. Sampling occurred beginning at the well with the lowest contaminant concentration and ending at the well with the highest contaminant concentration. Before sampling, at least 3 casing

volumes were purged from each monitoring well using a submersible pump. Throughout purging, pH, conductivity, turbidity, and temperature were measured and recorded for the evacuated groundwater. These measurements were used to confirm that the well was purged sufficiently. Water samples were generally collected after the measurements of pH, conductivity, and temperature had stabilized to within 10 percent of the previous readings. Copies of the well purging and sampling logs are in Attachment B.

Sampling was performed with a new 1-1/2-inch-diameter disposable polyethylene bailer suspended from new nylon line. The bailer was equipped with a bottom-release device. Groundwater was collected with the bailer from just below the water surface in each monitoring well. Water samples were collected from the bailers in new 40-milliliter glass bottles provided by the analytical laboratory. The samples were collected so that no headspace was present in each bottle. The preservatives necessary for the analyses performed were provided in the glass bottles by the analytical laboratory.

The collected water samples were placed in sealable plastic bags and packed on ice in a portable ice chest immediately after collection. Samples were delivered within 24 to 48 hours to the analytical laboratory. Additional quality assurance/quality control (QA/QC) procedures, including the use of sample identification labels and chain-of-custody forms, were followed to track sample collection and delivery.

### **General Field QA/QC Procedures**

#### Chain-of-Custody Records

Chain-of-custody records were completed before samples were packaged for shipment. One copy of these records was placed in the project file. A second copy accompanied samples during transportation to the laboratory. The individual in the analytical laboratory who accepted responsibility for samples signed and dated the chain-of-custody record.

#### Equipment Decontamination Procedures

Field equipment was decontaminated between sampling events using the following procedures:

1. Rinsed with water using a brush to remove soil and mud.
2. Washed with non-phosphate detergent and water using a brush.
3. Rinsed with deionized or distilled water.
4. Rinsed again with deionized or distilled water.
5. Air dried.

Personal Decontamination Procedures

At a minimum, field personnel followed the following decontamination procedures:

1. Wore appropriate gloves.
2. Washed hands thoroughly with soap and water.
3. Avoided unnecessary contact with groundwater.

The site health and safety plan (HSP) was reviewed for site-specific personal decontamination procedures.

Wastewater and Solid Waste Storage and Disposal

Small volumes of used wash and rinse solutions were collected during field work and transported to a central decontamination area. This wastewater was stored in a holding tank. The Project Manager determined the appropriate disposal method for this wastewater. Waste manifests this quarter are in Attachment I.

Solid wastes such as used personal protective equipment, paper towels, trash bags, and any other solid debris were collected for disposal. Because the sampled groundwater was not a hazardous waste, the solid wastes were disposed with the onsite trash.

Field Investigation Documentation Procedures

Field personnel followed documentation procedures developed for site investigation work. The procedures served to (1) provide a record of the activities performed in the field and (2) permit identification of samples and tracking of their status in the field, during shipment, and at the laboratory. All documentation was recorded with waterproof ink. Groundwater sampling activities were documented on daily field reports and on well purge and sample logs.

Health and Safety

Arctos used a site-specific HSP with procedures that were followed by field personnel for equipment safety, medical surveillance, personal protection, air quality monitoring, exposure control, emergency response, and general work practices during field activities. Before beginning work at the site, a site safety meeting was conducted. Field personnel reviewed the HSP and signed the accompanying acknowledgment form before initiating field activities. Field personnel were required to comply with the HSP throughout performance of site assessment activities.

Analytical QA/QC Procedures

Laboratory analytical QA/QC procedures included (1) preparing and analyzing laboratory samples to assess the performance of the analytical laboratory and (2) conducting data validation in accordance with the protocols described below. QC samples prepared by the laboratory included method blanks, matrix spike and matrix spike duplicates, and laboratory control samples.

The laboratory results were reviewed in general accordance with EPA guidelines for data validation. The data validation process included reviewing laboratory results for the following parameters:

- Completeness of the data package
- Compliance with EPA-required holding times
- Agreement of dilution factors with reported detection limits
- Presence or absence of analytes in the method blanks
- Agreement of duplicate samples
- Percent recovery and relative percent difference results for matrix spike and matrix spike duplicate analyses
- Percent recovery results for laboratory control samples.

- (a) Elevation of PVC well casing (north edge) surveyed relative to mean sea level (MSL). Wells were surveyed by Cross Land Surveying, Inc., per AB 2886 requirements. Benchmark K2-741, elevation is 467.835 feet above MSL.
- (b) Water Table Elevation = (Casing Elevation - Depth to Water).
- (c) Wells were resurveyed by Cross Land Surveying, Inc., per AB 2886 requirements, on 19 October 2010 after remediation system construction. Benchmark K2-741, elevation is 467.835 feet above MSL.
- (d) Depth of groundwater assumed to be below screened interval; well had 6 inches or less of water.
- (e) NM - Not measured.
- (f) Baseline remediation system values.

- (a) Samples collected before July 2005 collected by others; data provided by Delta Environmental Consultants, Inc., Second Quarter 2005 Groundwater Monitoring Report dated 31 July 2005.
- (b) Total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene, xylenes, methyl tert-butyl ether (MTBE), di-isopropyl ether (DIPE), ethyl tert-butyl ether (ETBE), tert-amyl methyl ether (TAME), tert-butyl alcohol (TBA), methanol, ethanol, 1,2-dichloroethane (1,2-DCA), and 1,2-dibromoethane (EDB) analyzed by EPA Method 8260; reported in micrograms per liter (µg/l).
- (c) ND - Not detected at the reporting limit listed.
- (d) "--" - Not analyzed.
- (e) NS - Not sampled.
- (f) TBA results may be biased slightly high. A fraction of MTBE (typically less than 10 percent) converts to TBA during the analysis of water samples. This conversion effect is considered to be mathematically significant in samples that contain MTBE/TBA ratios of over 20:1.
- (g) Baseline remediation system values.
- (h) Primarily compounds not found in typical Gasoline.

## Laboratory Results

Mike Purchase  
Arctos Environmental  
2332 5th St., Suite A  
Berkeley, CA 94610

Subject : 9 Water Samples  
Project Name : Tesoro - Livermore #67076  
Project Number : 01LV

Dear Mr. Purchase,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed. Testing procedures comply with the TNI 2009 standards.

Laboratory results relate only to the samples tested. This report may be freely reproduced in full, but may only be reproduced in part with the express permission of Pace Analytical Services, Inc.

Pace Analytical Services, Inc. is certified by the State of California under the Environmental Laboratory Accreditation Program (ELAP), lab number 08263CA.

If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

A handwritten signature in black ink that reads "Troy G. Turpen". The signature is fluid and cursive, with "Troy" and "G." being more stylized and "Turpen" having a more traditional cursive look.

Troy Turpen

## Case Narrative

The Method Reporting Limit for Methanol has been increased due to the presence of an interfering compound for sample DW-7.

California Laboratory Services provided analytical testing associated with these samples, but is not accredited by the National Environmental Laboratory Accreditation Program (NELAP). Please refer to the attached subcontract report for a list of this laboratory's current certifications.

Report Number : 90175

Date : 01/28/2015

Project Name : **Tesoro - Livermore #67076**Project Number : **01LV**Sample : **MW-3**

Sample Date :01/20/2015

Matrix : Water

Lab Number : 90175-01

Parameter	Measured Value	Method Reporting Limit	Units	Analysis Method	Date/Time Analyzed
Benzene	< 0.50	0.50	ug/L	EPA 8260B	01/21/15 23:12
Toluene	< 0.50	0.50	ug/L	EPA 8260B	01/21/15 23:12

Scott Forbes  
Pace Analytical Services, Inc. - Davis  
2795 Second St. Suite 300  
Davis, CA 95616

**Project Name: Tesoro-Livermore #67076**

Enclosed are the results of analyses for samples received by the laboratory on 01/21/15 08:45.  
Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved  
methodologies. I certify that the results are in compliance both technically and for completeness.

Analytical results are attached to this letter. Please call if we can provide additional assistance.

Sincerely,

James Liang, Ph.D.  
Laboratory Director

CA DOHS ELAP Accreditation/Registration number 1233

## Notes and Definitions

QM-4X	The spike recovery was outside of QC acceptance limits for the MS and/or MSD due to analyte concentration at 4 times or greater than the spike concentration. The QC batch was accepted based on LCS and/or LCSD recoveries within the acceptance limits.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

RE: Project: Tesoro-Livermore #67076  
Pace Project No.: 10294722

Dear Scott Forbes:

Enclosed are the analytical results for sample(s) received by the laboratory on January 22, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Chee Lee  
chee.lee@pacelabs.com  
Project Manager

## PROJECT NARRATIVE

Project: Tesoro-Livermore #67076  
Pace Project No.: 10294722

---

**Method:** RSK 175  
**Description:** RSK 175 AIR Headspace  
**Client:** PASI California  
**Date:** January 27, 2015

### General Information:

5 samples were analyzed for RSK 175. All samples were received in acceptable condition with any exceptions noted below.

- C5: The sample was not collected in the appropriate container for headspace analysis.
- DW-1 (Lab ID: 10294722002)
  - DW-3 (Lab ID: 10294722003)
  - DW-7 (Lab ID: 10294722005)
  - IP-5 (Lab ID: 10294722001)
  - MW-7 (Lab ID: 10294722004)

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

### Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

### Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### Duplicate Sample:

All duplicate sample results were within method acceptance criteria with any exceptions noted below.

### Additional Comments:

## REPORT OF LABORATORY ANALYSIS

Pace Project No.: 10294722

---

**Method:** **SM 2320B**  
**Description:** 2320B Alkalinity  
**Client:** PASI California  
**Date:** January 27, 2015

### General Information:

5 samples were analyzed for SM 2320B. All samples were received in acceptable condition with any exceptions noted below.

C5: The sample was not collected in the appropriate container for headspace analysis.

- DW-1 (Lab ID: 10294722002)
- DW-3 (Lab ID: 10294722003)
- DW-7 (Lab ID: 10294722005)
- IP-5 (Lab ID: 10294722001)
- MW-7 (Lab ID: 10294722004)

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

### Additional Comments:

- DW-7 (Lab ID: 10294722005)
- IP-5 (Lab ID: 10294722001)
- MW-7 (Lab ID: 10294722004)

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

### Duplicate Sample:

All duplicate sample results were within method acceptance criteria with any exceptions noted below.

### Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

## QUALIFIERS

Project: Tesoro-Livermore #67076

Pace Project No.: 10294722

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

## Laboratory Results

Scott Stromberg  
Orion Environmental  
2955 Redondo Ave.  
Long Beach, CA 90806

Subject : 11 Water Samples  
Project Name : Tesoro - Livermore #67076  
Project Number : 01LV

Dear Mr. Stromberg,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed. Testing procedures comply with the TNI 2009 standards.

Laboratory results relate only to the samples tested. This report may be freely reproduced in full, but may only be reproduced in part with the express permission of Pace Analytical Services, Inc.

Pace Analytical Services, Inc. is certified by the State of California under the Environmental Laboratory Accreditation Program (ELAP), lab number 08263CA.

If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

A handwritten signature in black ink that reads "Troy G. Turpen". The signature is fluid and cursive, with "Troy" and "G." being more stylized and "Turpen" having a more traditional cursive look.

Troy Turpen

Subject : 11 Water Samples  
Project Name : Tesoro - Livermore #67076  
Project Number : 01LV

## Case Narrative

The Method Reporting Limit for Methanol has been increased due to the presence of an interfering compound for samples IP-10 and DW-6.

California Laboratory Services provided analytical testing associated with these samples, but is not accredited by the National Environmental Laboratory Accreditation Program (NELAP). Please refer to the attached subcontract report for a list of this laboratory's current certifications.

Recoveries for some Matrix Spike/Matrix Spike Duplicate analytes were outside of control limits. This may indicate a bias for the samples that were spiked. Since the LCS recoveries were within control limits, no data are flagged.

Enclosed are the results of analyses for samples received by the laboratory on 01/21/15 17:15.  
Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved  
methodologies. I certify that the results are in compliance both technically and for completeness.

Analytical results are attached to this letter. Please call if we can provide additional assistance.

Sincerely,

James Liang, Ph.D.  
Laboratory Director

CA DOHS ELAP Accreditation/Registration number 1233

## Notes and Definitions

- QM-4X The spike recovery was outside of QC acceptance limits for the MS and/or MSD due to analyte concentration at 4 times or greater than the spike concentration. The QC batch was accepted based on LCS and/or LCSD recoveries within the acceptance limits.
- HT-4 Sample was originally analyzed within holding time. Due to high concentration of the analyte, the sample was reanalyzed with a dilution outside of the EPA recommended holding time.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

RE: Project: Tesoro-Livermore #67076  
Pace Project No.: 10294728

Dear Scott Forbes:

Enclosed are the analytical results for sample(s) received by the laboratory on January 22, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Chee Lee  
chee.lee@pacelabs.com  
Project Manager

## PROJECT NARRATIVE

Project: Tesoro-Livermore #67076  
Pace Project No.: 10294728

---

**Method:** RSK 175  
**Description:** RSK 175 AIR Headspace  
**Client:** PASI California  
**Date:** January 27, 2015

### General Information:

10 samples were analyzed for RSK 175. All samples were received in acceptable condition with any exceptions noted below.

C5: The sample was not collected in the appropriate container for headspace analysis.

- DW-2 (Lab ID: 10294728001)
- DW-5 (Lab ID: 10294728007)
- DW-6 (Lab ID: 10294728004)
- DW-8 (Lab ID: 10294728009)
- DW-9 (Lab ID: 10294728005)
- IP-1 (Lab ID: 10294728008)
- IP-10 (Lab ID: 10294728002)
- IP-8 (Lab ID: 10294728010)
- IP-9 (Lab ID: 10294728003)
- MW-2 (Lab ID: 10294728006)

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

### Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

### Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### Duplicate Sample:

All duplicate sample results were within method acceptance criteria with any exceptions noted below.

### Additional Comments:

## REPORT OF LABORATORY ANALYSIS

**Method:** **SM 2320B**  
**Description:** 2320B Alkalinity  
**Client:** PASI California  
**Date:** January 27, 2015

### General Information:

10 samples were analyzed for SM 2320B. All samples were received in acceptable condition with any exceptions noted below.

C5: The sample was not collected in the appropriate container for headspace analysis.

- DW-2 (Lab ID: 10294728001)
- DW-5 (Lab ID: 10294728007)
- DW-6 (Lab ID: 10294728004)
- DW-8 (Lab ID: 10294728009)
- DW-9 (Lab ID: 10294728005)
- IP-1 (Lab ID: 10294728008)
- IP-10 (Lab ID: 10294728002)
- IP-8 (Lab ID: 10294728010)
- IP-9 (Lab ID: 10294728003)
- MW-2 (Lab ID: 10294728006)

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: WET/40186

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 10294122001,10294216001

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MSD (Lab ID: 1887992)
  - Alkalinity, Total as CaCO<sub>3</sub>

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

### Duplicate Sample:

All duplicate sample results were within method acceptance criteria with any exceptions noted below.

### Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

## QUALIFIERS

Project: Tesoro-Livermore #67076

Pace Project No.: 10294728

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### LABORATORIES

PASI-M Pace Analytical Services - Minneapolis

Pace Project No.: 10294728

---

### SAMPLE QUALIFIERS

Sample: 10294728009

- [1] The sample was not collected in the appropriate container for headspace analysis.

Sample: 10294728010

- [1] The sample was not collected in the appropriate container for headspace analysis.

Sample: 1887040

- [1] The sample was not collected in the appropriate container for headspace analysis.

### ANALYTE QUALIFIERS

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
