Re: **Quarterly Summary Report – First Quarter 2005**
76 Service Station No. 4186 / CoP No. WNO 1237
1771 First Street
Livermore, California

Dear Mr. Schultz:

On behalf of ConocoPhillips Company (ConocoPhillips), ATC Associates Inc. (ATC) is forwarding the quarterly summary report for the above referenced facility.

Sincerely,
ATC ASSOCIATES INC.

RE: **Quarterly Remedial Performance Summary-First Quarter 2005**
76 Service Station No. 4186
1771 First Street
Livermore, CA
SECOR Project No.: 77CP.60004.04.4186

Dear Ms. Lathrop:

This letter, prepared by SECOR International Incorporated (SECOR) on behalf of ConocoPhillips, presents a remedial action performance summary for the ozone injection system operating at the site referenced above. Included in this report are tables and figures summarizing the system operation during the current quarter. Field data sheets and laboratory reports are included as Attachments A and B, respectively. A brief site background and the status of recent remedial activities are presented below.

SITE BACKGROUND

The site is an operating 76 service station located at First Street between N and O Streets in Livermore, California. The current station configuration consists of a service station building, four product dispenser islands, and two underground storage tanks (USTs). There is an ozone injection remediation system on the sites that injects a mixture of ozone and air to ten sparge points. The system was put into operation on December 19, 2001. SECOR took over operation of the system in September 2003.

REMEDIAL PERFORMANCE SUMMARY

Ozone Injection Operation

The ozone injection system consists of a panel mounted KVA C-Sparge™ System that produces up to 4 grams per hour (0.009 pounds per hour) of ozone. The system supplies ozone to ten sparge points in eight wells for seven minutes per well, 18 cycles per day. Operation of the ozone injection system was initiated on December 19, 2001. The system was non-operational for most of the quarter. The compressor piston was leaking ozone; a piston replacement kit was installed on February 28, 2005. On March 29 the system was found down due to a tripped breaker. Operational data is provided in Table 1.

Ozone Injection Performance

Monthly groundwater samples are collected from monitoring wells U-3 and U-6 and analyzed for total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene, and total xylenes (BTEX), and methyl tert-butyl ether (MtBE). Results of

SECOR

Quarterly Remedial Performance Summary
April 26, 2005
Page 2

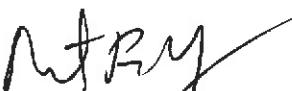

monthly groundwater sampling events are summarized in Table 2. Concentration versus time graphs for dissolved TPHg, benzene, and MtBE in monitoring wells U-3 and U-6 are provided in Figures 2 and 3. Field data sheets are presented in Attachment A. Certified laboratory analytical reports and chain-of-custody documentation for the groundwater monitoring events conducted during the current quarter are provided in Attachment B.

If you have any questions, please contact us at (916) 861-0400.

Sincerely,
SECOR International Incorporated

QUARTERLY SUMMARY REPORT
First Quarter 2005

76 Service Station No. 4186 / CoP No. WNO 1237
1771 First Street
Livermore, California

City/County ID#: Livermore
County: Alameda

Alameda County
May 6, 2005
Environmental Health

PREVIOUS SITE ACTIVITY

The subject site is an operating service station located on the southwest corner of First Street (State Highway 84) and N Street in Livermore, California. Properties in the immediate site vicinity are used for commercial purposes that include restaurants, automobile repair shops, and shopping facilities. The site contains four dispenser islands, a canopy, station building/convenience store, and two 10,000-gallon gasoline USTs.

June 1996 - Dispenser and piping replacement activities were completed.

September 1997 - A soil gas survey was conducted as part of a baseline site evaluation associated with the property transfer from Unocal Corporation to Tosco. Six soil gas probes were advanced and samples collected at 3 to 15 feet bgs in the vicinity of the UST complex, dispenser islands, and product lines.

April 1998 – A receptor survey was conducted from the Alameda County Zone 7 Water Agency. Two municipal wells were identified approximately 1,500 and 1,800 feet northwest of the site, and two domestic wells were located approximately 1,900 and 2,800 feet southwest and west of the site.

June 1998 – Monitor wells U-1 through U-3 were installed.

May 2000 – A site conceptual model was completed for the site. Results indicated a groundwater velocity of 46 feet per year.

February 2001 Offsite monitor wells U-4 and U-5 were installed

December 2001 - Ten onsite soil borings (U-6, U-7 and SP-1 through SP-8) were installed. Borings U-6 and U-7 were converted to monitor wells. Borings SP-1 through SP-8 were completed as sparge points with the installation of 2-inch diameter KVA sparge points attached to 1/2-inch blank schedule 80 PVC casing. The sparge points were constructed of 3-inch long microporous plastic. Sparge points SP-1 through SP-4 were installed to a depth of 45 feet bgs. Sparge points SP-6S and SP-7S were installed to a depth of 25 feet bgs. The remaining two sparge locations contained nested sparge points (SP-5, SP-5S, SP-8 and SP-8S) installed to 25 and 45 feet bgs in each boring, respectively.

An ozone remediation system was installed consisting of a "C-SpargeTM" ozone microsparging unit. The C-SpargeTM unit included a control panel, an ozone generator, air compressor, and a programmable timer/controller.

January 2005 – ATC became the new lead site consultant.

SENSITIVE RECEPTORS

Receptor Survey conducted from the Alameda County Zone 7 Water Agency. Two municipal wells were identified approximately 1,500 and 1,800 feet northwest of the site, and two domestic wells were located approximately 1,900 and 2,800 feet southwest and west of the site.

GROUNDWATER MONITORING AND SAMPLING

Groundwater is currently monitored and sampled on a quarterly basis each year. During the March 23, 2005 monitoring and sampling event, groundwater depths ranging from 21.64 feet (U3) to 25.45 feet (U5) below top of casing (TOC). The groundwater flow direction was reported towards the west at a gradient of 0.04 ft/ft. Maximum dissolved groundwater concentrations were present as follows: TPPH (21,000 ug/L in U3), benzene (94 ug/L in U3), and methyl tertiary butyl ether (MtBE) (6,200 ug/L in U3).

REMEDIATION STATUS

The ozone sparge system, manufactured by KVA, was placed into operation on December 19, 2001 and is designed to cycle the ozone/oxygen injection between 8 sparge points. A typical injection schedule for this site was design to operate at 18 times a day at 5 and 15 minutes per point per cycle. The system's current cycle frequency is 7 minutes.

To date the system has operated for 9,172 hours and has injected 83 pounds of ozone. For the first quarter of 2005, the system was operational for 7 hours. Equipment malfunctions, namely a faulty compressor piston, resulted in the down-time during this reporting period.

CHARACTERIZATION STATUS

Based on current and historic data, the dissolved MtBE plume is not defined in the upgradient direction. The upgradient-most well, U-3, contained 6,200 ug/l MtBE during the Q1 2005 sampling event. The offsite, down gradient-most well, U-5, contained 0.65 ug/l of MtBE during Q4 2004. An overall decrease in MtBE concentration was observed across the site from Q4 2004 to Q1 2005. This may be attributed to an observed 8 feet (on average) water table increase since the last reporting period.

RECENT COORESPONDENCE

No correspondence was prepared this quarter

THIS QUARTER ACTIVITIES (First Quarter 2005)

1. ATC Associates Inc. (ATC) became the new lead consultant for the site.

WASTE DISPOSAL SUMMARY

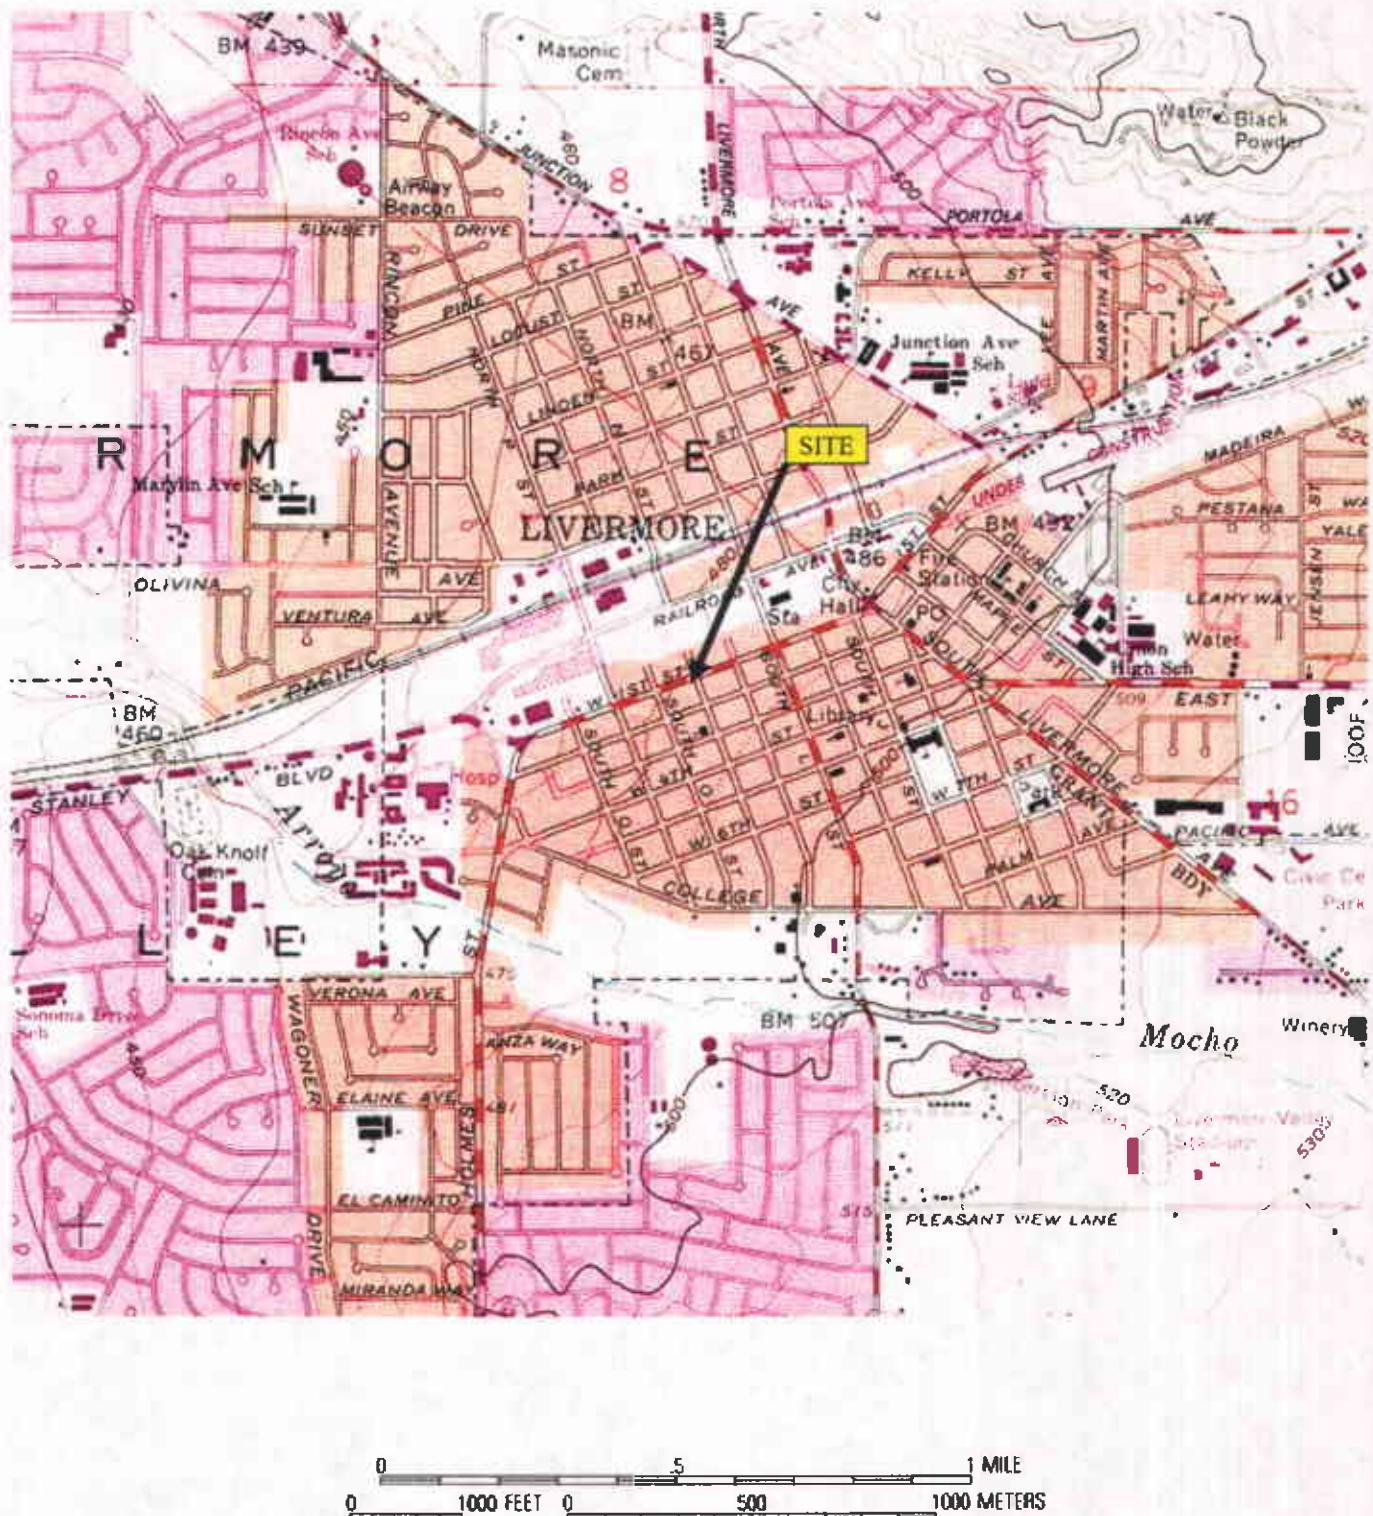

No waste was generated this quarter.

June 1996 - A total of 25 cubic yards of soils was excavated and disposed.

NEXT QUARTER ACTIVITIES (Second Quarter 2005)

1. Additional onsite assessment requirements will be discussed with the lead regulatory agency to determine if any is required.
2. Once the ozone sparge system has been repaired, the operation and maintenance (O&M) frequency for the second quarter will be modified to increase maintenance visits, in order to improve system performance. The O&M frequency may return to monthly once the system has achieved a sufficient run-time percentage.
3. An engineering system review will be conducted to evaluate the effectiveness of the current ozone system. The equipment malfunctions (faulty pistons and tripped breakers) have been chronic and have significantly limited the system run-time and effectiveness.
4. Site background information will be checked to ensure that upgradient dissolved MTBE levels are not related to other potential gasoline plumes in the site vicinity.

Definitions:

TPHg = Total petroleum hydrocarbons as gasoline
MtBE = Methyl tert-butyl ether
µg/L = Micrograms per liter
ORP = Oxidation Reduction Potential
mV = Millivolts
DO = Dissolved Oxygen
mg/l = Milligrams per liter

Notes:

NM Not Measured
-- Data not available
a Sampled by Gettler-Ryan, Inc.
b Hydrocarbon in gasoline range does not match laboratory gasoline standard.
c Data not recorded due to instrumentation malfunction
d Data not available at time of reporting.
e Quantity of unknown hydrocarbon(s) in sample based on gasoline in well U-6

Field Data Sheet

Ozone Sparge System

ConocoPhillips Site # 4186
1771 First Street
Livermore, California

Requested By: Amy Draffan
Lab: STL

ENTERED
B2005

Frequency	Item to Inspect or Maintain	Date Performed	
Monthly	Check integrity of all hoses, fittings, piping, and valves	02-28-05	032905
Monthly	Measure Blower Running Amperage	10.4	9.6
Monthly	Inspect electrical fittings and tighten as needed	02-28-05	032905
Monthly	Check controller operation	02-28-05	032905
As-Needed	Adjust controller program		
Monthly	Gross particle filter-visually inspect	02-28-05	
As-Needed	Gross particle filter-replace as necessary		
Monthly	Check flow and pressure on assemblies (system and wells)	02-28-05	032905
Monthly	Take ozone readings at compound and well boxes	02-28-05	032905
Monthly	Check wellhead connections		
Monthly	Check/test all safety override systems		
As-Needed	Sparge blower-repair as necessary		
As-Needed	Sparge blower-replace as necessary		

NOTES AND DESCRIPTION OF ACTIVITIES ON SITE

02-28-05; Reinstalled compressor after installing new piston rebuild kit
also installed new check valve on line #2
9 left off pressure too high > 50 doesn't break through

032905; System off; 16amp circuit breaker tripped

Legend and Notes

Analysis Flag

L2

Reporting limits were raised due to high level of analyte present in the sample.

Result Flag

Q1

Quantit. of unknown hydrocarbon(s) in sample based on gasoline.

R1

Analyte RPD was out of QC limits.

S7

Surrogate recoveries higher than acceptance limits.
