Duration: 0 hours

Phone call with Charlotte Evans of Conestoge-Rovers. Subslab sampling is complete and results will be presented in report by December 17th. They would like to decommission the two wells in the area of planned station expansion. Replacement wells would be replaced as close to new building as possible in native soil.

Chevron Marketing has a permit for building construction and wants to move forward. I indicated that I was reluctant to approve well decommissioning since that would implicitly approve the building expansion.

Charlotte indicated that they do not believe there is an issue with vapor intrusion for the station expansion. They have placed one boring in the building footprint and collected soil, groundwater, and vapor data. There is a "debris pit," in the area of building expansion. They don't believe there is a vapor intrusion issue for the building expansion. Charlotte will send me some information that will help to make case that there is not a vapor intrusion issue for building expansion.
