Oakland, Ca. 94607

SUBJECT: GROUNDWATER SAMPLING  
GI TRUCKING  
1750 ADAMS AVENUE  
SAN LEANDRO, CALIFORNIA

Dear Lisa:

On November 15, 1988, Blymyer Engineers, Inc. collected groundwater samples from four monitoring wells at the subject facility (see enclosed site map). This was the first installment of a quarterly monitoring plan recommended by BEI in a previous site investigation. A copy of the analytical results is enclosed.

The four 2" wells sampled (MW-2, MW-3, MW-4, and MW-5) surround a 12" sump (MW-1) that contained 2-5/8" of floating diesel fuel. The sampling procedure for each well was as follows:

- (1) Decontaminate teflon bailer;
- (2) Bail at least three well volumes (10 gallons) of groundwater from the well;
- (3) Decontaminate bailer again;
- (4) Collect sample with clean bailer, pour into one-liter amber jar with Teflon lid; and
- (5) Label sample and store on ice.

These four samples were sent to Trace Analysis Laboratory to be tested for Total Petroleum Hydrocarbons as diesel.

As the enclosed analytical results show, no diesel contamination was detected in groundwater samples collected from wells MW-2, MW-3, MW-4 or MW-5. Thus, there is no indication that the diesel contamination in MW-1 has migrated.

BEI recommends continued recovery of the free product in MW-1 and BEI will continue to sample groundwater in the surrounding
