Ms. Lam:

At the request of ExxonMobil Environmental Services (EMES), on behalf of ExxonMobil Oil Corporation, Cardno ERI is notifying you of a high-intensity targeted (HIT) event to be performed at the subject site. The HIT event will be conducted for approximately five days. Testing equipment is scheduled to arrive on site on August 18, 2014. Testing will occur from August 18 through August 22, 2014. Well MW5 and proposed well MW6 will be used during this event. Well locations are illustrated on the attached Generalized Site Plan.

During testing activities, a mobile remediation system and generator will be operated at the site. Extracted groundwater from testing activities will be placed in a separate water storage tank and stored at the site. Testing equipment will be located to minimize the disruptions to business operation during the remedial activities (see attached map). Testing equipment, including the water storage tank, is tentatively scheduled for removal on August 22, 2014.

Cardno ERI appreciates your cooperation in ensuring that field work occurs safely and efficiently. Cardno ERI will make every attempt to minimize disruptions to current site activities; however, some areas of the site may be blocked during testing activities to protect workers and the general public. Please contact Mr. Greg Gurss, Cardno ERI's project manager for this site, at greg.gurss@cardno.com or (916) 692-3130 with questions.

Sincerely,
