Dear Mr. Detterman:

Re: Pilot Test Results and Corrective Action Plan Report Submittal Update
Former Signal Oil Station 20-6145
800 Center Street
Oakland, California
Fuel Leak Case No. RO000454

Conestoga-Rovers & Associates (CRA) is submitting this letter on behalf of Chevron Environmental Management Company (Chevron) to document our May 7, 2010 phone conversation. On December 23, 2009 ACEH requested a report summarizing pilot test results, field procedures, laboratory results, boring logs, confirmation vapor point sampling, analysis of surficial lead to future residents, and recommendations by July 2, 2010 and a revised draft CAP by October 2, 2009. To date, CRA has installed the low flow air sparge (LFAS) wells, acquired equipment and permits, and Chevron has completed an analysis of surficial lead.

As discussed, CRA will not be able to complete the LFAS pilot test until PG&E provides a power source to the site. CRA engaged PG&E early on in the project, has been diligently pursuing PG&E to provide power to the site, and will continue our efforts. Once PG&E provides a power source, CRA will install the LFAS pilot test system, conduct a three month pilot test, and prepare a comprehensive report, as you requested in our phone conversation. Based on this succession of activities, CRA will submit the report approximately 180 days after electrical power is provided to the site. CRA will provide an updated submittal date to ACEH once PG&E has provided a power source to the site.
