February 28 sounds fine (for now).

Under ACPWA requirements there should be almost nothing to dispose except what can go into any dumpster: the "Christy box" and one drum's worth of auger cuttings from the portland cement well seal. These don't demand any particular special handling. If there is waste disposal, then two weeks are needed for lab analysis and five weeks for a landfill to turn around the paperwork; that makes waste disposal records not available until near the end of March.

Gary,

Thanks for the notification. Would a February 28 submittal date for a reasonably detailed well destruction report work? With pressure grouting, there should be very limited waste disposal to wrap into the report.

The well destructions at Foothill Gas are scheduled for Monday January 29

Thank you,

Gary D. Lowe

Gary,

I received your letter and ACPWA permit for the destructions last week. Let me know when you have a driller scheduled and we can modify the due date, but there is a real push by the state to close out old cases and sooner is definitely better.

Thanks,

Mark Detterman
