

SITE INSPECTION R00458

LOP Case R00458

3820 Manila, Oakland

Site Inspection by Jerry Wickham

September 11, 2008, 11:00 am

Met with Mansour Sepehr of SOMA, Albee Cohen, attorney for Stuart Depper, and Bruce Paige, environmental consultant for Albee Cohen

DPE system is operating on site. System is recovering free product and elevated vapor concentrations consisting of both petroleum hydrocarbons and chlorinated solvents. The system will operate for 45 days. After the 45 days, may want to extend the pilot test.

They are getting up to 30 foot radius of influence currently. Mass recovery appears to be good. Currently, they are producing approximately 500 gallons of water each day. Water is being treated on site and then going to sanitary sewer.

They will want to discuss the results of pilot test in a couple of weeks.
