Subject: Approval of Modified Work Plan Addendum; Fuel Leak Case No. RO0000464; (Global ID # T0600102238); Chevron #9-1851, 451 Hegenberger Road, Oakland, CA 94612

Dear Ladies and Gentlemen:

Alameda County Environmental Health Department (ACEH) staff has reviewed the case file, including the *Work Plan for Soil Borings Addendum*, dated July 1, 2011, the *Second Quarter 2011 Groundwater Monitoring and Sampling Report*, dated August 18, 2011 and the *Modified Work Plan Addendum*, dated September 16, 2011. These reports were prepared and submitted on your behalf by Conestoga-Rovers & Associates (CRA). Thank you for submitting the reports. The addendum proposes the installation of five soil bores, four around the former waste oil UST location to define the lateral extent of free-phase waste oil, and one downgradient of well MW-4 to further delineate the gasoline dissolved-phase hydrocarbon plume in the downgradient direction. At the request of the August 15, 2011, ACEH directive letter, the modified work plan addendum proposed the installation of two additional bores near or in the two known source areas at the site.

Based on ACEH staff review of the modified work plan addendum the proposed scope of work is conditionally approved for implementation provided that the technical comments below are incorporated during the proposed field investigation. Submittal of a revised work plan or a work plan addendum is not required unless an alternate scope of work outside that described in the work plan or technical comments below is proposed. We request that you address the following technical comments, perform the proposed work, and send us the reports described below. Please provide 72-hour advance written notification to this office (e-mail preferred to: mark.detterman@acgov.org) prior to the start of field activities.

TECHNICAL COMMENTS

- 1. Gasoline Source Area Bore and Existing Request for Vertical Delineation** – Based on existing reporting the source area of fuel hydrocarbons is understood to be in proximity to the southern end of the eastern dispenser. Consequently a source area vertical delineation of soil should be closely associated with that location. ACEH requests a bore location proximal to, but downgradient of the dispenser location. ACEH understands that product piping and other underground utilities may exist in that area, and that care must be
