Re: **First Quarter 2001 Monitoring Report and
Remediation Pilot Testing**

Shell-branded Service Station
6039 College Avenue
Oakland, California
Incident #98995745

Cambria Project #243-0503-002

JUN 19 2001

Dear Mr. Seery:

On behalf of Equiva Services LLC, Cambria Environmental Technology, Inc. (Cambria) is submitting this groundwater monitoring report in accordance with the reporting requirements of 23 CCR 2652d.

FIRST QUARTER 2001 ACTIVITIES

Groundwater Monitoring: Blaine Tech Services, Inc. (Blaine) of San Jose, California checked site monitoring wells for separate-phase hydrocarbons (SPH), measured dissolved oxygen (DO) levels, gauged water levels, and calculated groundwater elevations. Cambria prepared a groundwater elevation contour map (Figure 1). Blaine's report, including the laboratory report and supporting field documents, is included as Attachment A.

Groundwater from MW-3 and MW-4 is analyzed annually in the first quarter for total recoverable petroleum hydrocarbons (TRPH) by EPA Method SM 5520B/F and semi-volatile organics (SVOCs) by EPA Method 8270C. TRPH was detected at 13.3 parts per million in MW-4. The only SVOCs detected were bis(2-ethylhexyl)phthalate at 22 parts per billion (ppb), 2-methylnaphthalene at 8.4 ppb, and naphthalene at 39 ppb in MW-3, and bis(2-ethylhexyl)phthalate at 410 ppb and naphthalene at 160 ppb in MW-4. Historical TRPH results are summarized in Table 3. Certified laboratory reports for the current samples are included in Attachment A.

Remediation Pilot Testing: Cambria conducted short-term pilot tests on March 15, 2001 to determine the effectiveness of dual-phase vacuum extraction (DVE) and soil vapor extraction (SVE) in remediating hydrocarbons in soil and groundwater. DVE is the process of applying high vacuum through an airtight well seal to simultaneously extract soil vapors from the vadose zone and enhance groundwater extraction from the saturated zone. A stinger is lowered into the well to draw down the water table and increase the unsaturated area available for SVE. A Remediation Services International Inc V3 internal combustion engine (ICE) equipped with a separator tank was used to extract soil vapors and groundwater and to abate the extracted soil vapors. Cambria notified the Bay Area Air Quality Management District of the test on March 12, 2001.

Monitoring wells MW-3 and MW-4 were tested for approximately 1.5 hours each. The ICE was set to operate at a constant speed, to yield a constant vacuum and air-flow rate. The speed was then adjusted to observe differences in operating conditions and yield of the formation. Throughout the tests, Cambria measured extracted groundwater volume, applied vacuum, air flow, vapor concentration, groundwater drawdown in nearby wells, and vacuum influence in nearby wells. During each test, a groundwater and vapor sample were collected for total purgeable hydrocarbons as gasoline (TPHg), methyl tert-butyl ether (MTBE), benzene, toluene, ethylbenzene, and total xylenes analysis by EPA Method 8260. Groundwater recharge data was also collected from each well at the end of each test.

Groundwater extraction test data is included in Table 1, with the historical purging data. TPHg, benzene, and MTBE concentrations were reported as <1,000, 110, and 4,300 ppb, respectively, for the MW-3 groundwater sample. The test extracted 275 gallons of groundwater from well MW-3, removing an estimated <0.002, 0.0002, and 0.01 pounds of TPHg, benzene, and MTBE respectively, based on concentrations from laboratory analysis of the groundwater sample. Cambria observed 0.12 feet of groundwater drawdown in well MW-4 while extracting from MW-3. TPHg, benzene, and MTBE concentrations were reported as 2,600, 300, and 7,000 ppb, respectively, for the MW-4 groundwater sample. The test extracted 364 gallons of groundwater from well MW-4, removing an estimated 0.008, 0.0009, and 0.021 pounds of TPHg, benzene, and MTBE, respectively. Drawdown was not observed in well MW-3 while extracting from MW-4.

Data collected during the SVE portion of the pilot test is presented in Table 2. TPHg, benzene, and MTBE concentrations were reported as 130, 3.2, and 17 parts per million by volume (ppmv) for the MW-3 vapor sample. Based on the measured air-flow rates and the concentrations detected in this vapor sample, the MW-3 test removed approximately 0.059, 0.001, and 0.008 pounds of TPHg, benzene, and MTBE, respectively. Vacuum influence was not observed in any nearby wells. TPHg, benzene, and MTBE concentrations were reported as 440, 9.4, and 41 ppm for the MW-4 vapor sample. Based on the measured air-flow rates and the concentrations

detected in this vapor sample, the MW-4 test removed approximately 0.133, 0.003, and 0.013 pounds of TPHg, benzene, and MTBE, respectively. Vacuum influence was not observed in any nearby wells. However it is possible that short-circuiting of air flow may have occurred through the adjacent underground storage tank complex or piping trenches. Seasonal variation in groundwater elevations limit well screen availability and the effectiveness of SVE. In addition, due to low inflow vapor concentrations, SVE alone would not directly address the groundwater MTBE plume.

ANTICIPATED SECOND QUARTER 2001 ACTIVITIES

Remedial Activities: The drawdown observed in MW-4 while dewatering MW-3 during the DVE pilot test suggests that groundwater extraction may be effective in gaining hydraulic control of the MTBE plume. Water recovery during the DVE pilot test exhibited a significant increase over the average recovery rate for historical total fluid extraction by vacuum truck operations (TFE VacOps); however it is uncertain whether the difference in water recovery can be attributed to the DVE operations. It is possible that improper methodology was used during past TFE VacOps events resulting in poor water recovery. Proper methodology involves entraining air in the stinger to assist in lifting water out of the well. If no air is allowed to assist in lifting water from the well, a condition known as vapor-lock occurs. In this condition, it appears that water is being removed and vacuum is being applied; however the optimum rate of extraction is not achieved.

Cambria recommends monthly TFE VacOps, with a reevaluation in the fourth quarter of 2001. Cambria will observe TFE VacOps to confirm proper operation.

Groundwater Monitoring: Blaine will measure and remove detected SPH, gauge all wells, sample selected site wells if no SPH are present, measure DO levels, and tabulate the data. Cambria will prepare a monitoring report.

Site Conceptual Model (SCM): Cambria will prepare and submit an SCM, including results of a sensitive receptor survey in the second quarter of 2001.

EXPLANATION

- MW-1** Monitoring well location
- T-1** Tank backfill well
- BH-A** Soil boring, installed 9/93
- NA** Not available
- Groundwater flow direction
- XX.XX** Groundwater elevation contour, in feet above mean sea level (msl) approximately located; dashed where inferred
- Well designation
- ELEV** Groundwater elevation, in feet above msl
- Benzene and MTBE concentrations are in parts per billion and are analyzed by EPA Method 8020; MTBE results in parentheses are analyzed by EPA Method 8260. Date is most recent sampling unless otherwise noted.

Abbreviations & Notes:

TPPH = Total purgeable hydrocarbons as gasoline

MtBE = Methyl tert-butyl ether

µg/L = Micrograms per liter

ppb = Parts per billion, equivalent to µg/L

L = Liter

gal = Gallon

g = Gram

* = Groundwater sample collected for laboratory analysis

Mass removed based on the formula: volume extracted (gal) x Concentration (µg/L) x (g/10⁶µg) x (pound/453.6g) x (3.785 L/gal) - assumes measured laboratory analysis values apply throughout the duration of event

Volume removal data based on the formula: density (in gms/cc) x 9.339 (ccxlbs/gmsxgals)

TPPH, benzene analyzed by EPA Method 8015/8020

MTBE analyzed by EPA Method 8260 in bold font, all other MTBE analyzed by EPA Method 8020

Concentrations based on most recent groundwater monitoring results

Groundwater extracted by vacuum trucks provided by ACTI between September 22, 1999 and November 10, 1999, and by Blaine Tech Services thereafter. Water disposed of at a Martinez refinery.

CAMBRIA

Table 2: Vapor Extraction - Mass Removal Data - Shell-branded Service Station, Incident #98995745, 6039 College Avenue, Oakland, California

| Date | Well | ID | Interval Hours of Operation | System Flow Rate VOA | Horiba | Hydrocarbon Concentrations TPHg Benzene MTBE (Concentrations in ppmv) | <u>TPHg</u> | | <u>Benzene</u> | | <u>MTBE</u> | |
|------|------|----|-----------------------------------|-------------------------------|--------|-----------------------------------------------------------------------------|-------------------------------------|--------------------------------------|----------------------------------------|-----------------------------------------|-------------------------------------|--------------------------------------|
| | | | | | | | TPHg Removal Rate (#/hour) | Cumulative TPHg Removed (#) | Benzene Removal Rate (#/hour) | Cumulative Benzene Removed (#) | MTBE Removal Rate (#/hour) | Cumulative MTBE Removed (#) |
| | | | | | | | | | | | | |

Abbreviations and Notes:

CFM = Cubic feet per minute

TPHg = Total petroleum hydrocarbons as gasoline (C6-C12) by modified EPA Method 8015 in 1 liter teflar bag samples

ppmv = Parts per million by volume

= Pounds

* = Vapor sample collected for laboratory analysis

NA = Not available

TPHG, Benzene, and MTBE analyzed by EPA Method 8015/8020 in 1 liter teflar bag samples

TPHg / Benzene / MTBE removal rate = Rate based on Bay Area Air Quality Management District's Manual of Procedures for Soil Vapor Extraction dated July 17, 1991.

(Rate = Concentration (ppmv) x system flow rate (cfm) x (1lb-mole/386ft³) x molecular weight (86 lb/lb-mole for TPHg, 78 lb/lb-mole for benzene, 88 lb/lb-mole for MTBE)

x 60 min/hour x 1/1,000,000) - Assumes measured laboratory analysis values apply throughout the duration of event

Cumulative TPHg / Benzene / MTBE removal = Previous removal rate multiplied by the hour-interval of operation plus the previous total

Table 3: Total Recoverable Petroleum Hydrocarbons

Shell-branded Service Station, Incident #98995745, 6039 College Avenue, Oakland, California

| Date Sampled | Reporting Limit (mg/L) | MW-3 TRPH Concentration (mg/L) | MW-4 TRPH Concentration (mg/L) |

Oakland, CA

Monitoring performed on February 13 and 16, 2001

Groundwater Monitoring Report 010216-Y-2

This report covers the routine monitoring of groundwater wells at this Shell-branded facility. In accordance with standard procedures that conform to Regional Water Quality Control Board requirements, routine field data collection includes depth to water, total well depth, thickness of any separate immiscible layer, water column volume, appropriate calculated purge volume (if applicable), elapsed evacuation time (if applicable), total volume of water removed (if applicable), and standard water parameter instrument readings. Sample material is collected, contained, stored, and transported to the laboratory in conformance with EPA standards. Purgewater (if applicable) is, likewise, collected and transported to the Martinez Refining Company.

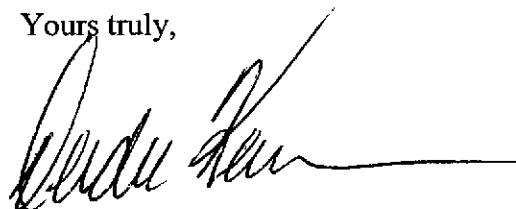

Basic field information is presented alongside analytical values excerpted from the laboratory report in the cumulative table of **WELL CONCENTRATIONS**. The full analytical report for the most recent samples and the field data sheets are attached to this report.

At a minimum, Blaine Tech Services, Inc. field personnel are certified on completion of a forty hour Hazardous Materials and Emergency Response training course per 29 CFR 1910.120. Field personnel are also enrolled in annual eight hour refresher courses.

Blaine Tech Services, Inc. conducts sampling and documentation assignments of this type as an independent third party. In order to avoid compromising the objectivity necessary for the proper and disinterested performance of this work, Blaine Tech Services, Inc. concentrates on objective data collection and does not participate in the interpretation of analytical results, the definition of geological or hydrological conditions, the formulation of recommendations, or the marketing of remedial systems.

Please call if you have any questions.

Yours truly,

WELL CONCENTRATIONS
Shell-branded Service Station
6039 College Avenue
Oakland, CA
Wic #204-5508-3301

| Well ID | Date | TPPH (ug/L) | TEPH (ug/L) | B (ug/L) | T (ug/L) | E (ug/L) | X (ug/L) | MTBE 8020 (ug/L) | MTBE 8260 (ug/L) | TOC (MSL) | Depth to Water (ft.) | Depth to SPH (ft.) | GW Elevation (MSL) | SPH Thickness (ft.) | DO (ppm) |
|---------|------|----------------|----------------|-------------|-------------|-------------|-------------|------------------------|------------------------|--------------|----------------------------|--------------------------|--------------------------|---------------------------|-------------|
|---------|------|----------------|----------------|-------------|-------------|-------------|-------------|------------------------|------------------------|--------------|----------------------------|--------------------------|--------------------------|---------------------------|-------------|

Abbreviations:

TPPH = Total petroleum hydrocarbons as gasoline by modified EPA Method 8015

TEPH = Total petroleum hydrocarbons as diesel by modified EPA Method 8015

BTEX = benzene, toluene, ethylbenzene, xylenes by EPA Method 8020

MTBE = methyl-tertiary-butyl ether

TOC = Top of Casing Elevation

SPH = Separate-Phase Hydrocarbons

GW = Groundwater

DO = Dissolved Oxygen

ug/L = parts per billion

ppm = parts per million

msl = Mean sea level

ft = Feet

<n = Below detection limit

NA = Not applicable

ND = Not detected at or above the minimum quantitation limits.

Notes:

a = Chromatogram patterns indicate an unidentified hydrocarbon.

b = Sample was analyzed outside the EPA recommended holding time.

c = DO Readings not taken this event.

Notes and Definitions

- M-03 Sample was analyzed at a second dilution.
- P-01 Chromatogram Pattern: Gasoline C6-C12
- P-03 Chromatogram Pattern: Unidentified Hydrocarbons C6-C12
- Q-03 The RPD and/or percent recovery for this QC spike sample cannot be accurately calculated due to the high concentration of analyte already present in the sample.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
