Re: **Third Quarter 2001 Monitoring Report**

Shell-branded Service Station
6039 College Avenue
Oakland, California
Incident #98995745
Cambria Project #243-0503-002

OCT 10 2001

Dear Mr. Hwang:

On behalf of Equiva Services LLC, Cambria Environmental Technology, Inc. (Cambria) is submitting this groundwater monitoring report in accordance with the reporting requirements of 23 CCR 2652d.

THIRD QUARTER 2001 ACTIVITIES

Groundwater Monitoring: Blaine Tech Services, Inc. (Blaine) of San Jose, California checked site monitoring wells for separate-phase hydrocarbons (SPH), measured dissolved oxygen (DO) levels, gauged water levels, and calculated groundwater elevations. Cambria prepared a vicinity map which includes previously submitted well survey information (Figure 1) and a groundwater elevation contour map (Figure 2). Blaine's report, including the laboratory report and supporting field documents, is included as Attachment A.

Site Conceptual Model (SCM): Cambria submitted an SCM, including the results of a sensitive receptor survey, to the Alameda County Health Care Services Agency (ACHCSA) on August 9, 2001.

Fax (510) 420-9170

In a letter dated August 16, 2001, ACHCSA requested that groundwater samples analyzed for total recoverable petroleum hydrocarbons (TRPH) be cleaned up using silica gel prior to analysis.

According to a California Regional Water Quality Control Board-San Francisco Bay Region memorandum dated February 16, 1999, the purpose of silica gel cleanup is to mitigate the effects of interferences to the extractable total petroleum hydrocarbon analysis. These interferences are primarily due to the presence of polar biogenic material that may naturally occur in groundwater or result from the biodegradation of petroleum hydrocarbons. Groundwater from MW-3 and MW-4 is analyzed annually in the first quarter for TRPH by EPA Method SM 5520B/F and semi-volatile organics (SVOCs) by EPA Method 8270C. In the future, groundwater samples from MW-3 and MW-4 will be filtered and treated with silica gel prior to TRPH analysis. TRPH and SVOC analytical data for wells MW-3 and MW-4 are summarized in Tables 1 and 2.

ANTICIPATED FOURTH QUARTER 2001 ACTIVITIES

Groundwater Extraction (GWE): Monthly mobile GWE will be conducted using MW-3 and MW-4. Mobile GWE vacuum operations consist of lowering a dedicated stinger into a monitoring well and extracting fluids using a vacuum truck. The volume of fluid extracted is recorded and used to calculate the quantity of aqueous-phase hydrocarbon removed from the subsurface. Cambria will use tabulated groundwater extraction data to compare the effectiveness of mobile GWE with previously tested dual-phase vacuum extraction and soil-vapor extraction as remediation options for this site.

Groundwater Monitoring: Blaine will measure and remove any detected SPH, gauge all wells, sample selected site wells if no SPH are present, measure DO levels, and tabulate the data. Cambria will prepare a monitoring report.

CLOSING

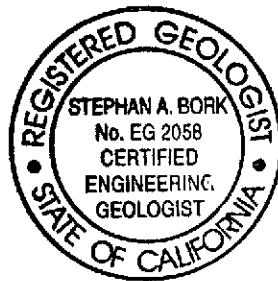

We appreciate the opportunity to work with you on this project. Please call Melody Munz at (510) 420-3324 if you have any questions or comments.

Sincerely,
Cambria Environmental Technology, Inc

Melody Munz
Project Engineer

Stephan A. Bork, C.E.G., C.HG.
Associate Hydrogeologist

Vicinity / Area Well Survey Map
1/2 Mile Radius

EXPLANATION

- MW-1 • Monitoring well location
- T-1 ◎ Tank backfill well
- BH-A ◎ Soil boring, installed 9/93
- Groundwater flow direction
- XX.XX Groundwater elevation contour, in feet above mean sea level (msl) approximately located; dashed where inferred
- Well** Well designation
- ELEV** Groundwater elevation, in feet above msl
- Benzene Benzene and MTBE concentrations are in parts per billion and are currently analyzed by EPA Method 8260; historical results that were analyzed by EPA Method 8020 are shown in parentheses.

Groundwater Monitoring Report 010730-M-2

This report covers the routine monitoring of groundwater wells at this Shell-branded facility. In accordance with standard procedures that conform to Regional Water Quality Control Board requirements, routine field data collection includes depth to water, total well depth, thickness of any separate immiscible layer, water column volume, appropriate calculated purge volume (if applicable), elapsed evacuation time (if applicable), total volume of water removed (if applicable), and standard water parameter instrument readings. Sample material is collected, contained, stored, and transported to the laboratory in conformance with EPA standards. Purgewater (if applicable) is, likewise, collected and transported to the Martinez Refining Company.

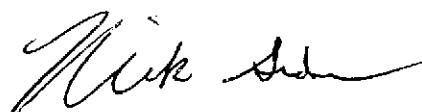

Basic field information is presented alongside analytical values excerpted from the laboratory report in the cumulative table of **WELL CONCENTRATIONS**. The full analytical report for the most recent samples and the field data sheets are attached to this report.

At a minimum, Blaine Tech Services, Inc. field personnel are certified on completion of a forty hour Hazardous Materials and Emergency Response training course per 29 CFR 1910.120. Field personnel are also enrolled in annual eight hour refresher courses.

Blaine Tech Services, Inc. conducts sampling and documentation assignments of this type as an independent third party. Our activities at this site consisted of objective data and sample collection only. No interpretation of analytical results, defining of hydrological conditions or formulation of recommendations was performed.

Please call if you have any questions.

Yours truly,

Nick Sudano
Project Coordinator

Well ID	Date	TPPH (ug/L)	TEPH (ug/L)	B (ug/L)	T (ug/L)	E (ug/L)	X (ug/L)	MTBE 8020 (ug/L)	MTBE 8260 (ug/L)	TOC (MSL)	Depth to Water (ft.)	Depth to SPH (ft.)	GW Elevation (MSL)	SPH Thickness (ft.)	DO (ppm)
---------	------	----------------	----------------	-------------	-------------	-------------	-------------	------------------------	------------------------	--------------	----------------------------	--------------------------	--------------------------	---------------------------	-------------

Abbreviations:

TPPH = Total petroleum hydrocarbons as gasoline by EPA Method 8260B; prior to May 29, 2001 analyzed by EPA Method 8015.

TEPH = Total petroleum hydrocarbons as diesel by modified EPA Method 8015.

BTEX = benzene, toluene, ethylbenzene, xylenes by EPA Method 8260B; prior to May 29, 2001, analyzed by EPA Method 8020.

MTBE = methyl-tertiary-butyl ether

TOC = Top of Casing Elevation

SPH = Separate-Phase Hydrocarbons

GW = Groundwater

DO = Dissolved Oxygen

ug/L = parts per billion

ppm = parts per million

msl = Mean sea level

ft = Feet

< n = Below detection limit

NA = Not applicable

ND = Not detected at or above the minimum quantitation limits.

Notes:

a = Chromatogram patterns indicate an unidentified hydrocarbon.

b = Sample was analyzed outside the EPA recommended holding time.

c = DO Readings not taken this event.

When separate-phase hydrocarbons are present, ground water elevation is adjusted using the relation:

Corrected ground water elevation = Top-of-casing elevation - depth to water + (0.8 x hydrocarbon thickness).

Subject : 4 Water Samples
Project Name : 6039 College Avenue, Oakland
Project Number : 010730-M2
P.O. Number : 98995745

Dear Mr. Sudano,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed.

Kiff Analytical is certified by the State of California (# 2236). If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

A handwritten signature in black ink that reads "Joel Kiff".

Joel Kiff
