Re: **Dispenser and Piping Upgrade Sampling Report**
Shell-branded Service Station
6039 College Avenue
Oakland, California
Incident # 98995745
Cambria Project #206-0503-001

Received
JUL 12 2004
Environmental Health

Dear Mr. Matthews:

On behalf of Equilon Enterprises LLC dba Shell Oil Products US, Cambria Environmental Technology, Inc. (Cambria) is submitting this *Dispenser and Piping Upgrade Sampling Report* which presents the results of sampling conducted during station upgrade activities at the referenced site. Presented below are a summary of site conditions, sampling activities and analytical results.

SITE CONDITIONS

Location and Site Use: This Shell-branded service station at 6039 College Avenue in Oakland, California is situated in a mixed commercial/residential neighborhood (Figures 1 and 2). The service station has been in operation since 1940. Groundwater sampling has been performed at the site since 1990.

Site Lithology: The site is underlain by fine-grained Quaternary alluvial deposits consisting of interbedded sandy clay and sandy silt with rare silty gravel and sand units to the total depth explored of 50 feet (ft).

Groundwater Depth and Flow Direction: Depth to water in the site wells has historically ranged from approximately 8 to 21 feet below grade (fbg) since the wells were first monitored in February of 1990. Historically, the groundwater flow direction has been to the west-southwest.

Cambria
Environmental
Technology, Inc.

5900 Hollis Street
Suite A
Emeryville, CA 94608
Tel (510) 420-0700
Fax (510) 420-9170

During the first quarter of 2004, the gradient was approximately 0.15 ft/ft. Currently, there are six monitoring wells, four of which are monitored and sampled quarterly and two of which are monitored and sampled annually. There are also two on-site tank backfill wells.

2004 Upgrade Activities: Paradiso Mechanical, Inc. (Paradiso) of San Leandro, California performed upgrades to the site's facilities during May of 2004. Paradiso upgraded the under dispenser containment to the dispenser locations adjacent to product, vapor and vent lines. Additionally, Paradiso replaced and upgraded enhanced vapor recovery on the underground storage tank (UST) fuel fill port sumps on the top of the UST's in the tank pit area.

SAMPLING ACTIVITIES AND SAMPLE ANALYSIS

Personnel Present: Stewart Dalie, Staff Scientist, Cambria
Keith L. Matthews, Hazardous Materials Inspector, City of Oakland, Fire Services Agency.
Mark Freitas, Construction Forman, Paradiso.

Sample Date: May 7, 2004.

Sampling Requirements: Based on the conversation between Stewart Dalie and Keith Matthews during field activities on May 7, 2004, one soil sample was required to be collected beneath each dispenser and at 90-degree elbows of product piping within 1 to 2 feet of native soil (Figure 2). Based on field conditions and the scope of work, only the dispenser locations and the adjacent 90-degree elbows of product piping were exposed.

Dispenser and Pipeline Sampling: Under the direction of Mr. Matthews, eight soil samples were collected between at 5 fbg (Figure 2). These included four samples (D-1 through D-4) from beneath dispensers and four samples (P-1 through P-4) from beneath product piping. Field indications of hydrocarbons, including staining and odor, were not observed in the vicinity of the sampled areas. Cambria's standard procedures for dispenser and piping sampling are presented as Attachment A.

Sample Analyses: State-certified laboratory Severn Trent Laboratories Inc. of Pleasanton, California analyzed all eight samples for total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene, and xylenes (BTEX), and methyl tert-butyl ether (MTBE) by EPA Method 8260B. Laboratory analytical results are summarized in Table 1. Laboratory analytical reports and chain of custody records are presented as Attachment B.

Waste Handling: To characterize stockpiled soil for disposal, four brass tubes of soil were collected for approximately 2 cubic yards of stockpiled soil, and then composited by the analytical laboratory. The soil was analyzed for TPHg and BTEX by EPA Method 8260B and for total threshold limit concentration lead. The stockpile was transported on May 14, 2004 to Forward Landfill in Manteca, California for disposal as a non-hazardous waste. Waste disposal documentation is included as Attachment C.

ANALYTICAL RESULTS

MTBE and benzene were not detected in any of the soil samples collected during the upgrade activities. TPHg was detected in only one sample, collected at P-3-4' at a concentration of 17 parts per million. However, the laboratory noted that the hydrocarbons detected in the gasoline range did not match the laboratory gasoline standard. Analytical results are summarized in Table 1, and the laboratory report is included as Attachment B.

CONCLUSIONS

The current soil sampling results indicate minimal impact of TPHg to soil in one localized vicinity, near the former dispenser pans adjacent to the 90-degree piping elbow on the western side of the site. Based on conversations with Mr. Matthews of the City of Oakland Fire Services Agency on May 7, 2004, Cambria agrees with the recommendation that no further investigation is warranted at this time.

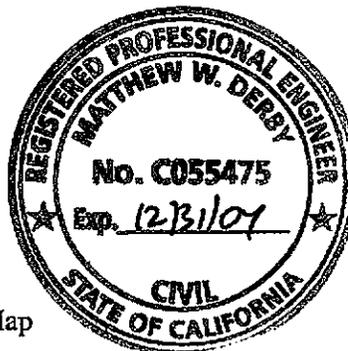

CLOSING

Please call Caryl Weekley at (510) 420-3324 if you have any questions or comments.

Sincerely,
Cambria Environmental Technology, Inc.

Abbreviations and Notes:

TPHg = Total petroleum hydrocarbons as gasoline, analyzed by modified EPA Method 8260B.

Benzene, toluene, ethylbenzene, and total xylenes analyzed by EPA Method 8260B.

MTBE = Methyl tertiary butyl ether, analyzed by modified EPA Method 8260B.

fbg = Feet below grade.

<n = Below laboratory detection limit of n ppm.

a = Hydrocarbon reported in the gasoline range does not match the lab's gasoline standard.

ATTACHMENT A

Standard Piping and Dispenser Removal Sampling Procedures

CAMBRIA

STANDARD PIPING AND DISPENSER REMOVAL SAMPLING PROCEDURES

Cambria Environmental Technology, Inc. (Cambria) has developed standard operating procedures for collecting soil samples during petroleum dispenser and piping removal. These procedures ensure that the samples are collected, handled, and documented in compliance with California Administration Code Title 23: Waters; Chapter 3: Water Resources Control Board; Subchapter 16: Underground Storage Tank Regulations (Title 23). Cambria's sampling procedures are based on guidelines contained in the California State Regional Water Quality Control Board Tri-Regional Staff Recommendations for Preliminary Evaluation and Investigation of Underground Tank Sites dated August 10, 1990.

Piping and Dispenser Removal Sampling

The objective of sample collection during routine dispenser and piping removals is to determine whether hydrocarbons or other stored chemicals have been released to the subsurface. We collect one soil sample from the native soil beneath each dispenser unit, at each piping elbow, and at every 20 ft of product piping, as applicable.

The soil samples are collected in steam cleaned brass or steel tubes from either a driven split-spoon type sampler or the bucket of a backhoe. When a backhoe is used, approximately three inches of soil are scraped from the surface and the tube is driven into the exposed soil.

Upon removal from the split-spoon sampler or the backhoe, the samples are trimmed flush, capped with Teflon sheets and plastic end caps, labeled, logged and refrigerated for delivery under chain of custody to a State certified analytic laboratory.

Legend and Notes

Analysis Flag

o

Reporting limits were raised due to high level of analyte present in the sample.

Result Flag

g

Hydrocarbon reported in the gasoline range does not match our gasoline standard.

sl

Surrogate recoveries were lower than QC limit due to matrix interference, confirmed by reanalysis.

Dear Ms. Weekley,

Attached is our report for your samples received on 05/07/2004 17:05

This report has been reviewed and approved for release. Reproduction of this report is permitted only in its entirety.

Please note that any unused portion of the samples will be discarded after 06/21/2004 unless you have requested otherwise.

We appreciate the opportunity to be of service to you. If you have any questions, please call me at (925) 484-1919.

You can also contact me via email. My email address is: vvancil@stl-inc.com

Sincerely,

Vincent Vancil

The use of this information is strictly for the purpose of doing business with the Centralized Residual Management Team (CRMT). Upon termination of the relationship with the CRMT, this information is not to be forwarded, duplicated, shared or used for any purpose other than for the documentation of past actions.

RESIDUAL MANAGEMENT PROCEDURE

ISSUED DATE: 08/01/01
 CANCELS ISSUE:
 ISSUED BY: LRR

RESIDUAL STREAM: SOIL WITH UNLEADED GASOLINE
VENDOR: ALLIED-BFI
LOCATION: ALLIED WASTE - MANTECA
 9999 SOUTH AUSTIN ROAD
 MANTECA, CA 95336

CALIFORNIA - TRANSPORTATION AND RETAIL

BTEX - EPA 8021B/8260B (IF BENZENE IS > OR = TO 10 MG/KG THEN TCLP BENZENE IS REQUIRED)

CAM METALS = TTLC METALS - **LEAD ONLY**

STLC ON ALL TTLC METALS 10 TIMES STLC MAXIMUM

TTLC LEAD => 13 MG/KG REQUIRES ORGANIC LEAD ANALYSIS

IF ANY TTLC TOTAL METAL IS > OR = TO 20 TIMES TCLP REGULATORY LEVELS, TCLP IS REQUIRED

TOTAL PETROLEUM HYDROCARBONS, METHOD 418.1 OR **8015** - GASOLINE

~~MTBE METHOD 8260B (GC/MS)~~

AQUATIC BIOASSAY (FISH TOX) IS ONLY TO BE RUN ON SAMPLES > OR = TO 5000 PPM TPH. AQUATIC BIOASSAY (FISH TOX) = PART 800 OF STANDARD METHODS FOR THE EXAMINATION OF WATER AND WASTEWATER (15TH EDITION)

LABORATORY INSTRUCTIONS (MINIMUM GUIDELINES ONLY)

-ALTERNATE APPROVED TEST METHODS PER SW846 ARE ALSO ACCEPTABLE

-ALL REQUIRED TESTS ON COMPOSITE (**max 4:1**)

-LABORATORY IS TO SUPPLY QA/QC INFORMATION WITH ALL ANALYTICAL REPORTS

~~MAIL OR FAX ALL ANALYSIS TO THE CENTRALIZED RESIDUAL MANAGEMENT TEAM~~

PROCEDURE ORIGINAL DATE: 08/01/01
 PROCEDURE REVISED DATE: 08/01/01
