Duration: 0 hours

Returned phone call received late Friday from Jason Beebe. Ms. Shakha Gupta called in regards to the qualified closure of this case last year. Discussed the qualification, that it remains an active service station, as it was not evaluated for vapor intrusion under the LTCP. As some point they may add a car wash, but not for now. I stated that the site may need to be reevaluated under the LTCP, but since car washes are typically very open air, it is unlikely that a vapor intrusion risk would be a concern. This would partly depend on the exact construction / design of the wash. They may also need to replace the USTs; what would happen then. Our CUPA section would be out for the removals, but if contamination from confirmation samples is consistent with what is known to remain, a new case is less likely. If higher, then a new case would be more likely to be opened. She wanted to know how old the USTs were. For the best answer, she probably should get in contact with our CUPA section to determine. She'll call the general number as I don't have the number here (since we're moving downstairs today).
