BACKGROUND

The site is currently occupied by an operating Unocal service station. The UST's have been replaced and the used-oil tank removed. The majority of hydrocarbon-impacted soil (1,863 tons) were excavated and transported to a Unocal-approved landfill. In July 1995, Unocal subsequently performed a soil and groundwater investigation which included drilling nine soil borings and constructing three groundwater monitoring wells. Oxygen Release Compound (ORC) is present in the three groundwater monitoring wells and one tank pit well.
