Subject: RO490- San Francisco French Bread
Entry Type: Phone call
Company: Gribi Associates

Start: Tue 8/28/2012 3:21 PM
End: Tue 8/28/2012 3:26 PM
Duration: 5 minutes

I received a voicemail from James Gribi re RO490- San Francisco French Bread. He called while I was on vacation and had inquired about the status of his work plan. I briefly reviewed the WP and returned his call. He walked through the positioning of his proposed boring locations. I told him they were well situated. Mr. Gribi indicated he thought the product observed in the wells was relatively immobile and appeared in the wells only after a long period of inactivity. I mentioned the product was initially observed in only one well (after a four year inactive period) but that within 8 months the product had accumulated to about 1.5 feet in all three wells. I thought this indicted mobility. I said I might ask for one additional boring to the south of MW-2 and that I'd try to get a letter out approving the work plan in the next week or so.
