Subject: RO490- San Francisco French Bread
Entry Type: Phone call
Company: Gribi Associates

Start: Mon 10/22/2012 9:00 AM
End: Mon 10/22/2012 9:30 AM
Duration: 30 minutes

I called Jim Gribi for a follow up discussion re the RO490- San Francisco French Bread WP. We discussed the status of the "former well", depth of utilities beneath Market St, and if the geophysical survey included the sidewalk along Market and around the corner with 39th St. I also asked about the possibility of a sidewalk UST adjacent to the former Apt bldg as the fuel UST for the bakery was in the street.

I asked if the "former well" could be sampled. Mr. Gribi indicated there was no way in determining if the "former well" existed as the floor of the building covers the area where the well would have been. There were no discernible access points for well access. I asked him about the utility depths in Market St. and if groundwater may be influenced, negating the proposed sample locations on the other side of the street. Mr. Gribi said he'd look into the utility depth and get back to me. Mr. Gribi indicated the geophysical survey did include the sidewalk along Market and around the corner with 39th St and that it and a site reconnaissance did not reveal any indication of a UST associated with the apartment building location.

The action item resulting from the call is the utility depth determination and the validation of the proposed boring locations on the opposite side of Market St.
