RE: Final Report on the Contaminated Soil and Drum Disposal

Mr. Royer-

Enclosed please find the manifests for the soil removed from your plant for disposal at the Waste Management facility in Livermore, California. This material was profiled as "Diesel Contaminated Soil", and granted acceptance number 53794300. The material was accepted into the landfill, and used for daily cover, as per their permit. Additionally, please find the enclosed manifest (# 98362503) for the six (6) drums of absorbent materials, and the three (3) drums of diesel/water mixtures recovered during the initial spill response.

It is our estimation that we recovered between four hundred and fifty (450) and five hundred and fifty (550) gallons of diesel fuel. This is an estimate based upon the drum quantities and the amount of diesel-impacted soil that was removed. Actual quantity of the soil removed was approximately seventy-five (75) tons (see tare tickets). While an exact figure of material recovered cannot be determined, we estimate that approximately two-hundred and twenty (220) gallons of material was collected in the drums, and the balance was in the excavated soil.

Please feel free to contact me should you have any further questions.

Respectfully submitted,

Kevin Krause
