

Meeting with Roger Brewer with the RWQCB on 7-21-2000

We discussed the MTBE concentrations in monitoring wells MW-6, MW-7 and XW-3 and what future investigations should be done. We agreed that it is possible the plume is moving from downgradient after looking at the 4/98 analytical. Roger recommended (1) the extent (plume size) that poses a threat to surface water quality be determined (2) evaluate whether TPH(g) and BTEX concentrations will affect aquatic life, indoor air, odors nuisance concerns using Table F2 for not a current or potential drinking water resource, Application of Risk-based Screening Levels and Corrective Action to Sites With Contaminated Soil and Groundwater Volume 1: Summary Tier 1 Lookup Tables, Draft April 2000.
