MEMO to file:

I called KTW + Assoc. regarding our need to receive documents associated with the overexcavation of the former USI pit, its transportation, and off-site disposal. I requested this information in writing.

MEMO TO FILE:

I called David Elick (Geo Plexus) today as we have not yet received the DTW and soil excavating disposal information requested 7/26/94. I left a message on his recorder.

MEMO to file:

David Glick called today regarding questions I had during my initial case file review in prep for potential case closure. His comments are as follows

- ① KTW managed the over excavation. Soil was aerated / "composted" for some period of time. Tom of KTW informed Glick that he'd access his archived records to see what soil disposal documents he can locate. Tom also informed Glick that perimeter post-excitation samples may not have been collected, relying instead on the soil boring results, to which (reportedly) the excavation extended. A report documenting all this may not have ever been composed.
- ② MW-2 ~~was~~ not yet been properly "destroyed." Glick indicates Zone 2 approved previously a pressure grouting procedure, which he intends to employ (as I understand) for all wells at the site
- ③ Glick will compose a short table showing DTWs for all wells through the course of the investigation

MEMO to file:

1/3/91

I spoke with Kevin Krause of KTW : Assoc. today regarding several shortcomings of the most recent quarterly report, dated 12/27/90. See the attached list of items we discussed.

Mr. Krause indicated that an addendum will be submitted in 6-8 days covering most of the items so indicated on the attached sheet. Future reports will be modified to reflect these requirements.
