RE: SOIL SAMPLING - WASTE OIL TANK
SHELL STATION
2724 CASTRO VALLEY BOULEVARD
CASTRO VALLEY, CA

Dear Mr. Seto:

The attached soil analysis report was prepared by Blaine Tech Services dated November 21, 1986 regarding waste oil tank material removed during installation of new 550 gallon double walled fiberglass tank.

If you have any questions or require additional information, please call me on (415) 676-1414, Ext. 128.

Very truly yours,

R. G. Newsome
Sr. District Engineer

SAMPLING REPORT

Field sampling was undertaken in accordance with State and local enforcement agency standards and requirements for objective analytical information on the levels of residual contaminants found outside the primary containment structure. This project concerned the following:

Underground storage tank removal

Reason for removal -- replacement with double containment tanks

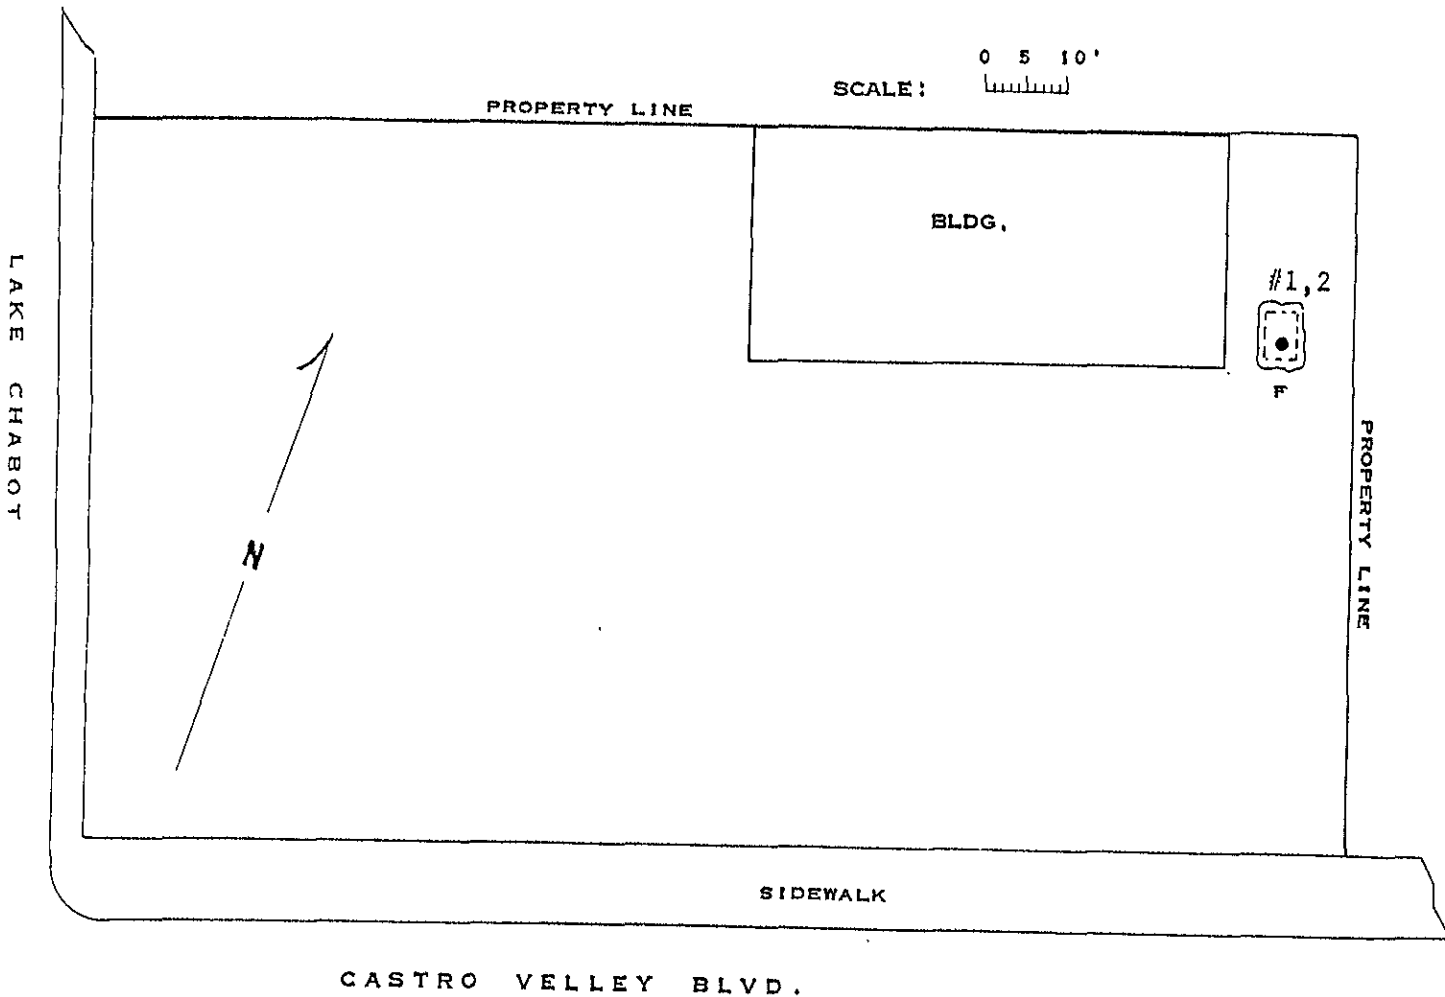

Type -- one 550 gallon waste oil

Age -- unspecified

Sampling was performed in accordance with approved methodology at the locations shown on the accompanying site diagram. Additional information is presented on the diagram including our field sampling designations and the lab identification numbers which reference the analytical results which will be found in the separate laboratory report. Sample material was collected in special containers appropriate to the type of analysis intended. Sample containers were sealed, chilled, and transported to the laboratory with standard chain of custody records maintained at each transmittal. This sampling report, the chain of custody, and the analytical report comprise the formal documentation of the sampling conducted during this phase of work at the site.
