

Site - Soluble Pb showed less  
 < 50 ppm

5.27 Call Kurt Miller of Shell to call me.

5/28/92 - Daniel Kirk - called - wants  
 letter above why no case closure - Ask to send  
 send info / lab results - after July 16, 1990  
 test for soluble lead.

4/26/93 Spike w/ Scott McLeod at W. GISS Ass. re:  
 dry well, GW flow direction, possible add'l wells.  
 sampling episode due in Dec, but has not been  
 done - sample is being done by Blaine Tech.

7/16/93 Review OMR - GW has risen to' ranging from  
 29.58 - 32.54' bgs. GW aquifer is not confined  
 ∴ wells are not appropriately screened for seasonal  
 high. MW-3 had 50ppb TPH-B, 6.8ppb benzene  
 GW flow to NW ~~has~~ <sup>is</sup> ~~greater~~ (May 93)?  
 GW at MW-3 may be analogous. General direction has  
 been to west

Shell Oil (Kurt Miller)

Need letter for defense. Rep  
 of ND - Also test for  
 Soluble lead in MW.  
 After 4-1/2's will evaluate  
 case . . . .
