

MEETING with CHEVRON
(with Mark Miller)

9/22/93

900 Otis Drive

- o No report or sample results have been submitted for the tank removals and overexcavation out at the site. Mr. Miller stated that he would submit the lab analysis results, but that he wished to submit all the information on the tank removals, overexcavation, and aerating of soils all together in one report.
- o Mr. Miller stated that they still have a phase of overexcavation to conduct in the area of the former pump islands. I told him that they must notify this office prior to doing so, so that we may come out to the site to observe.
- o He stated that they have plans to eventually install wells.
