Subject:
Information Update
Case RO1389 – GM Truck Center Site
8099 S. Coliseum Way
Oakland, California

Date:
March 14, 2013

Dear Mr. Nowell:

Contact:
Chuck Dittmar

This letter is to provide a brief update on the search for additional records for the activities related to the open Leaking Underground Storage tank (LUST) case number RO1389 at the property located at 8099 South Coliseum Way in Oakland, California (herein referred to as the "Site"). During previous discussions you had indicated that one of the items of information missing from the case file was a report on the removal of four former underground storage tanks (USTs) located on the western portion of the Site; one 2,000-gallon gasoline UST, one 2,000-gallon diesel fuel UST, one 1,000-gallon new oil UST, and one 1,000-gallon used oil UST.

ARCADIS has reviewed information from the Site owner (Argonaut Holdings LLC.) and determined that the USTs were removed and disposed, and contaminated soils were excavated and disposed under a contract with USPCI in August 1993. The USTs were removed from two separate excavations; one that contained the gasoline and diesel fuel USTs, and one that contained the new oil and used oil USTs. Based on the analytical results previously sent to the Alameda County Department of Environmental Health (ACDEH) in 1993, and a figure included in the file (attached), Clayton Environmental Consultants collected soil samples from the excavations after the USTs were removed. The attached figure depicts the sizes of the respective excavation areas. The gasoline/diesel UST excavation was approximately 18 feet by 14 feet; whereas the new/used oil UST excavation was approximately 8.5 feet by 17 feet. Based on notations included on the copy of the analytical results retrieved from the County web site, the gasoline/diesel UST excavation was approximately 12 feet deep, and the new/used oil UST excavation was approximately 8 feet deep.

Imagine the result

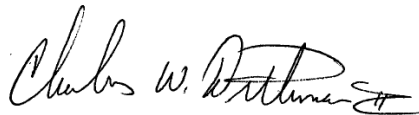

Accounting for the space occupied by the USTs in each excavation area, the estimated volumes of soil excavated from each area were; approximately 92 cubic yards from the gasoline/diesel fuel UST excavation, and approximately 32 cubic yards from the new/used oil UST excavation. The resulting total volume of soil excavated from the UST areas was approximately 124 cubic yards. The results of the sampling indicated a release from each of the UST areas, and a release report was submitted to the ACDEH on August 19, 1993 (attached).

ARCADIS also found copies of seven (7) manifests for the transportation and disposal of the USTs and the excavated soils. Each manifest for the soil disposal indicates that 17 cubic yards of soil was removed from the Site on October 7, 1993, resulting in a total of 119 cubic yards. This closely matches the estimated volume indicated above. Many of the manifest copies are faint but in part legible, and have been attached. We are working to obtain copies of these documents that are more legible and will forward to you if obtained.

I will be in contact with you to discuss this information.

Sincerely,

ARCADIS G&M of Michigan, LLC

COMMENTS
 The product line from the diesel tank to the dispenser had a corroded 90° L at the swing joint. There appeared to be over spill at the waste oil tank. The gasoline tank and the lube oil tank had minor over spill.
