Phone call with Bob Flory of AEI. Planning to excavate soils along one sidewall to remove zone of contaminated soil. They encountered burned wood and debris in the bottom of excavation. Water sample from tank pit had 71 ppb of TPHg and 72 ppb of MTBE. He was considering hydrogen peroxide treatment of water in tank pit to reduce MTBE in groundwater. However, MTBE not present in surrounding wells therefore, not necessary to treatment water in tank pit. He will proceed with excavation of sidewall.
