Re: *2016 Sub-Slab Vapor Depressurization System Performance Report*
Searway Property
649 Pacific Avenue
Alameda, California

Dear Ms. Jurek:

Trinity Source Group, Inc. (Trinity) has prepared this *2016 Sub-Slab Vapor Depressurization System Performance Report (Report)* on behalf of Timber Del Properties, for the referenced site (Figure 1). The operations and maintenance (O&M) activities are described in the following sections.

The sub-slab vapor depressurization (SSVD) system was installed at the existing commercial building at the site in order to prevent volatile organic compounds (VOCs) from migrating from the sub-slab area into indoor air. The SSVD system was installed in 2008 and operates continuously. Monitoring is currently conducted annually.

SUB-SLAB VAPOR DEPRESSURIZATION SYSTEM DESCRIPTION

Sub-slab air is withdrawn from the sub-slab material by means of an applied vacuum. The extracted air is routed through piping and discharged to the atmosphere.

The SSVD system includes two horizontal extraction wells located near former depressurization points DPT-1 and DPT-2, with extraction well pipe runs trenched to nearby walls. The pipe runs continue up to the first floor ceiling, where they are manifolded together and connected to a suction fan located in the attic. The exhaust air is piped to the southwest corner of the roof and discharged through a 6-foot tall stack. Vacuum is applied to the extraction wells using an electric fan blower equipped with a flow meter. The SSVD system was originally constructed with carbon treatment, but the carbon was removed in May 2009 due to very low VOC influent concentrations. The system layout is presented on Figure 2. The Sub-Slab System Process and Instrumentation Diagram is shown on Figure 3.

Sub-slab extraction system influent and effluent analytical data are summarized in Table 1. Sub-slab extraction system influent throughput and mass removal of VOCs are summarized in Table 2. Sub-slab

extraction system effluent throughput and discharge of VOCs are summarized in Table 3.

The Sub-Slab System Extraction Well Detail is shown on Figure 4. Each extraction well is a 3-foot long, 4-inch diameter, horizontal slotted PVC casing, which is connected to 4-inch diameter PVC blank pipe runs. The slotted pipe is set in the middle of the sub-base material. PVC screen extends across the sub-base material.

The Sub-Slab System Monitoring Point Detail is shown on Figure 5. The monitoring points (VS-1 through VS-22) were constructed in accordance with the design specifications presented in the EPA document, "Assessment of Vapor Intrusion in Homes Near the Raymark Superfund Site using Basement and Sub-Slab Air Samples" (EPA 600 R-05/147, March 2006). These monitoring points have proven to be effective in sample collection and measuring the pressure field established by an applied vacuum. Monitoring point locations are shown on Figure 2.

The Bay Area Air Quality Management District (BAAQMD) application number is 17506 and the plant number is 18970. The Permit to Operate is included in Attachment A. On March 19, 2012 Trinity requested a change in monitoring frequency from quarterly to annually, which was granted by BAAQMD. An approval letter of the monitoring frequency change is included in Attachment B.

SSVD SYSTEM O&M SUMMARY

Date of O&M Event: March 10, 2016
Sample Containers: 1-Liter Tedlar Bag
Sample Collection Point: Effluent
System Conditions: System running and passed smoke pen test for O&M event

Trinity collected an effluent sample and delivered it to Torrent Laboratory, Inc., a California-certified laboratory (ELAP# 1991). The sample was analyzed for VOCs and Stoddard solvent according to EPA Method TO-15 during this annual sampling event. The O&M field data sheets are included in Attachment C and the certified analytical report is included in Attachment D. The laboratory noted that for the TPH Stoddard analysis; "No Stoddard solvent standard was available at the time of analysis for quantitation. Sample was quantitated against a gasoline standard. Individual peaks do not match either gasoline or Stoddard solvent pattern."

SSVD SYSTEM PERFORMANCE

- SSVD has discharged a total of approximately 9.09 pounds of VOCs from March 11, 2015 to March 10, 2016, during approximately 365 days of operation.
- VOC removal rate for the period of March 11, 2015 to March 10, 2016 is 0.02893 pounds per day.
- The system is performing as expected with removal of VOCs and depressurization of the sub-slab area.

- The low concentrations of VOCs discharged to the atmosphere are well within the permitted discharge allowed for specific compounds and for the total limit of 10 pounds per day. No violations of the BAAQMD permit have occurred.
- All effluent VOC concentrations from March 11, 2015 to March 10, 2016 are less than Residential and Commercial Land Use Site-Specific Screening Levels¹ (Table 1). It should be noted that the Site-Specific Screening Levels have been updated to utilize the February 2016 Revision 3 Environmental Screening Levels (ESLs) issued by the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB). For each VOC, the Residential and Commercial Indoor Air ESLs were selected, and divided by the appropriate Site-Specific Attenuation Factor, to derive the Site-Specific Screening Level.
- In addition to updating ESL concentrations, in the February 2016 ESL update, the SFBRWQCB adopted default sub-slab vapor to indoor air attenuation factors (SSIA AFs). In the December 2013 ESL update, the SFBRWQCB did not provide default SSIA AFs and instead recommended site-specific assessments to establish SSIA AFs as needed. The February 2016 update adopted default SSIA AFs derived using a vapor-flux approach previously used in 2003 to 2008 SFBRWQCB ESLs with climate-adjusted inputs. The vapor-flux approach is based on the vapor-entry-to-building component of the Johnson and Ettinger model (Johnson and Ettinger, 1991). Climate-adjusted inputs to the model are based on regional-adjusted climate inputs for soil vapor entry rates to indoor air and indoor air to outdoor air exchange rates proposed by Brewer et al. 2014². The adopted commercial and residential SSIA AFs are 0.001 and 0.002, respectively, and are included in the derivation of sub-slab vapor ESLs. All effluent VOC concentrations from March 11, 2015 to March 10, 2016 are less than SFBRWQCB default commercial and residential ESLs with the exception of carbon tetrachloride, which only exceeds the residential ESL.

RECOMMENDATIONS

All effluent VOC concentrations are less than residential and commercial Site-Specific Screening Levels. Additionally, all effluent VOC concentrations are less than SFBRWQCB commercial ESLs. Therefore, Trinity recommends that the site be considered for case closure.

Notes:

Stoddard = Total petroleum hydrocarbons as gasoline.
 * = Method TO-3 (mod) no longer offered by laboratory, Stoddard to be analyzed by Method TO-15 as of 2015 O&M event.
 PCE = Tetrachloroethylene or Perchloroethylene
 TCE = Trichloroethylene
 VC = Vinyl Chloride
 VOCs = Volatile Organic Compounds
 MTBE = Methyl tertiary butyl ether
 TBA = Tert-Butanol
 TAME = Tert amyl methyl ether
 $\mu\text{g}/\text{m}^3$ = micrograms per cubic meter, also equivalent to parts per billion (ppb)
 < = Less than laboratory analytical method reporting limit.

S#	DESCRIPTION	[Schedule]	PAID
1	CHEM> Contaminated soil remediation, Contaminated soil vapor Sub-Slab Venting System	[G1]	1673

1 Permitted Source

*** See attached Permit Conditions ***

The operating parameters described above are based on information supplied by permit holder and may differ from the limits set forth in the attached conditions of the Permit to Operate. The limits of operation in the permit conditions are not to be exceeded. Exceeding these limits is considered a violation of District regulations subject to enforcement action.

PERMIT TO OPERATE

Plant# 18970

Page: 2

Expires: APR 1, 2017

This document does not permit the holder to violate any District regulation or other law.

*** PERMIT CONDITIONS ***

=====

COND# 23992 applies to S# 1

- 1. In no event shall emissions to the atmosphere of the following compounds exceed the corresponding emission limits in pounds per day:

Toxic Compound Emissions in #/day

Benzene	1.8E-2
Chloroform	9.3E-2
Carbon Tetrachloride	1.2E-2
Methylene Chloride	4.9E-1
Perchloroethylene	8.2E-2
Trichloroethylene	2.5E-1
Vinyl Chloride	6.6E-3

In addition, emissions of total volatile organic compounds shall not exceed 10 pounds per day. Soil vapor flow rate shall not exceed 72 scfm. [basis: Reg. 2-1-316, 2-2-301, 8-47-113]

- 2. To determine compliance with Condition 1, the operator of this source shall:
 - a. Analyze exhaust gas to determine the concentration of the compounds listed in Condition 1 and the total volatile organic compounds present for each of the first two days of operation. Thereafter, the exhaust gas shall be analyzed to determine the concentration of the compounds listed in condition 1 and total volatile organic compounds present once every 92 days on a quarterly basis.

Written authorization must be received from the District before any change in sampling frequency.

- b. Emissions in pounds per day shall be calculated for those compounds listed in condition 1 as well as the total volatile organic compounds.
- c. Submit to the District's Engineering Division the test results and emission calculations for the first two days of operation within one month of the testing date. Samples shall be analyzed according to modified EPA test methods TO-15 or equivalent to determine the concentrations those compounds listed

in condition 1 as well as the total volatile organic compounds.

- 3. The operator of this source shall maintain the following information in a District-approved log for each month of operation of the source:
 - a. dates of operation;
 - b. exhaust flow rate;
 - c. exhaust sampling date;
 - d. analysis results;
 - e. calculated emissions of POC and listed compounds in pounds per day.

Such records shall be retained and made available for inspection by the District for two years following the date the data is recorded. [basis: Reg. 1-523]

- 4. Any non-compliance with these conditions shall be reported to the Compliance and Enforcement Division at the time that it is first discovered. The submittal shall detail the corrective action taken and shall include the data showing the exceedance as well as the time of occurrence.
- 5. The operator shall maintain a file containing all measurements, records and other data that are required to be collected pursuant to the various provisions of this conditional Authority to Construct/Permit to Operate. All measurements, records and data required to be maintained by the applicant shall be retained for at least two years following the date the data is recorded. [basis: Reg. 1-523]
- 6. Upon final completion of the remediation project, the operator of Source S-1 shall notify the district within two weeks of decommissioning the operation.

Application No.: 17506  
Plant No. 18970  
Equipment Location:  
*Searway Property*  
*649 Pacific Avenue*  
*Alameda, CA*

Dear Applicant:

The District has reviewed your request, dated March 19, 2012 to change the monitoring frequency from quarterly to annually. Based on the information provided, an annual monitoring schedule is both reasonable from the District's perspective and will also grant your firm the flexibility requested. Be aware that you can monitor your systems more frequently if desired.

Please keep a copy of this letter and the attached revised operating conditions (COND#23992) as verification that a monitoring schedule of annually has been approved by the District for the site subject to P/O (Plant #18970).

Please include your application number with any correspondence with the District. The District's regulations may be viewed online at [www.baaqmd.gov](http://www.baaqmd.gov) If you have any questions on this matter, please call me at (415) 749-4630.

Very truly yours,

Flora W Chan

EXECUTIVE OFFICER/APCO

Application No. 17506  
Permit Condition No. 23992  
649 Pacifica Avenue in Alameda

COND# 23992 -----

1. In no event shall emissions to the atmosphere of the following compounds exceed the corresponding emission limits in pounds per day:

Toxic Compound Emissions in #/day

|                      |        |
|----------------------|--------|
| Benzene              | 1.8E-2 |
| Chloroform           | 9.3E-2 |
| Carbon Tetrachloride | 1.2E-2 |
| Methylene Chloride   | 4.9E-1 |
| Perchloroethylene    | 8.2E-2 |
| Trichloroethylene    | 2.5E-1 |
| Vinyl Chloride       | 6.6E-3 |

In addition, emissions of total volatile organic compounds shall not exceed 10 pounds per day. Soil vapor flow rate shall not exceed 72 scfm. [basis: Reg. 2-1-316, 2-2-301, 8-47-113]

2. To determine compliance with Condition 1, the operator of this source shall:
  - a. Analyze exhaust gas to determine the concentration of the compounds listed in Condition 1 and the total volatile organic compounds present for each of the first two days of operation. Thereafter, the exhaust gas shall be analyzed to determine the concentration of the compounds listed in condition 1 and total volatile organic compounds present once every 365 days on an annual basis. Written authorization must be received from the District before any change in sampling frequency.
  - b. Emissions in pounds per day shall be calculated for those compounds listed in condition 1 as well as the total volatile organic compounds.
  - c. Submit to the District's Engineering Division the test results and emission calculations for the first two days of operation within one month of the testing date. Samples shall be analyzed according to modified EPA test methods TO-15 or equivalent to determine the concentrations those compounds listed in condition 1 as well as the total volatile organic compounds.

Application No. 17506  
Permit Condition No. 23992  
649 Pacifica Avenue in Alameda

3. The operator of this source shall maintain the following information in a District-approved log for each year of operation of the source:
  - a. dates of operation;
  - b. exhaust flow rate;
  - c. exhaust sampling date;
  - d. analysis results;
  - e. calculated emissions of POC and listed compounds in pounds per day.

Such records shall be retained and made available for inspection by the District for two years following the date the data is recorded. [basis: Reg. 1-523]

4. Any non-compliance with these conditions shall be reported to the Compliance and Enforcement Division at the time that it is first discovered. The submittal shall detail the corrective action taken and shall include the data showing the exceedance as well as the time of occurrence.
5. The operator shall maintain a file containing all measurements, records and other data that are required to be collected pursuant to the various provisions of this conditional Authority to Construct/Permit to Operate. All measurements, records and data required to be maintained by the applicant shall be retained for at least two years following the date the data is recorded. [basis: Reg. 1-523]
6. Upon final completion of the remediation project, the operator of Source S-1 shall notify the district within two weeks of decommissioning the operation.

RE: SSDPS O & M Event 2016

Work Order No.: 1603070

Dear David Reinsma:

Torrent Laboratory, Inc. received 1 sample(s) on March 10, 2016 for the analyses presented in the following Report.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

**Project:** SSDPS O & M Event 2016

**Work Order:** 1603070

### **CASE NARRATIVE**

---

No issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Unless otherwise indicated in the following narrative, no results have been method and/or field blank corrected.

Reported results relate only to the items/samples tested by the laboratory.

Analytical Comment for TO15, Note: No stoddard solvent standard was available at the time of analysis for quantitation. Sample was quantitated against a gasoline standard. Individual peaks do not match either gasoline or stoddard solvent pattern.

This report shall not be reproduced, except in full, without the written approval of Torrent Analytical, Inc.

### Sample Result Summary

## Laboratory Qualifiers and Definitions

### DEFINITIONS:

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Accuracy/Bias (% Recovery)</b> - The closeness of agreement between an observed value and an accepted reference value.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Blank (Method/Preparation Blank)</b> -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.                                                                                                                                                                                                                                                                                                                                           |
| <b>Duplicate</b> - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Laboratory Control Sample (LCS ad LCSD)</b> - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Matrix</b> - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Matrix Spike (MS/MSD)</b> - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.                                                                                                                                                                                                                                                                                                                                          |
| <b>Method Detection Limit (MDL)</b> - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Practical Quantitation Limit (PQL)</b> - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.                                                                                                                                                                                                                     |
| <b>Precision (%RPD)</b> - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Surrogate (S) or (Surr)</b> - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis                                                                                                                                                                                                                                                              |
| <b>Tentatively Identified Compound (TIC)</b> - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.                                                                                                                                                               |
| <b>Units:</b> the unit of measure used to express the reported result - <b>mg/L</b> and <b>mg/Kg</b> (equivalent to PPM - parts per million in <b>liquid</b> and <b>solid</b> ), <b>ug/L</b> and <b>ug/Kg</b> (equivalent to PPB - parts per billion in <b>liquid</b> and <b>solid</b> ), <b>ug/m<sup>3</sup></b> , <b>mg.m<sup>3</sup></b> , <b>ppbv</b> and <b>ppmv</b> (all units of measure for reporting concentrations in air), % (equivalent to 10000 ppm or 1,000,000 ppb), <b>ug/Wipe</b> ( concentration found on the surface of a single Wipe usually taken over a 100cm <sup>2</sup> surface) |

### LABORATORY QUALIFIERS:

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>B</b> - Indicates when the analyte is found in the associated method or preparation blank</p> <p><b>D</b> - Surrogate is not recoverable due to the necessary dilution of the sample</p> <p><b>E</b> - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.</p> <p><b>H</b>- Indicates that the recommended holding time for the analyte or compound has been exceeded</p> <p><b>J</b>- Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative</p> <p><b>NA</b> - Not Analyzed</p> <p><b>N/A</b> - Not Applicable</p> <p><b>NR</b> - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added</p> <p><b>R</b>- The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts</p> <p><b>S</b>- Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative</p> <p><b>X</b> -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.</p> |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Sample Receipt Checklist

Client Name: Trinity Source Group

Date and Time Received: 3/10/2016 14:30

Project Name: SSDPS O & M Event 2016

Received By: ke

Work Order No.: 1603070

Physically Logged By: Idi

Checklist Completed By: Idi

Carrier Name: Client Drop Off

### Chain of Custody (COC) Information

Chain of custody present? Yes  
Chain of custody signed when relinquished and received? Yes  
Chain of custody agrees with sample labels? Yes  
Custody seals intact on sample bottles? Not Present

### Sample Receipt Information

Custody seals intact on shipping container/cooler? Not Present  
Shipping Container/Cooler In Good Condition? Yes  
Samples in proper container/bottle? Yes  
Samples containers intact? Yes  
Sufficient sample volume for indicated test? Yes

### Sample Preservation and Hold Time (HT) Information

All samples received within holding time? Yes  
Container/Temp Blank temperature in compliance? Yes Temperature: °C  
Water-VOA vials have zero headspace? No VOA vials submitted  
Water-pH acceptable upon receipt? N/A  
pH Checked by: n/a pH Adjusted by: n/a
