- ① Will get previous site invest. reports. Need well construction details. Can do scope down well, and HP locations.
- ② If risk assessment needed - do for commercial building over container. (1st plan to use as parking; later build commercial/industrial building on site)
- ③ Do another 2 qtrs of GW monitoring. Also analyze for PAHs. May see attenuating trend.
- ④ UST removal - no soil data available from 10'-15' bgs. After removal it will be evident if there is gross soil contamination. Up to 1000 ppm can be left in place. OK
