Re: No Further Action for the Eliot Aggregate Plant at 1544 Stanley Blvd, Pleasanton, CA

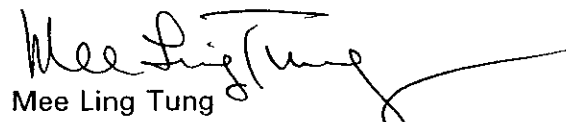

Dear Mr. Aldenhuysen:

This letter confirms the completion of site investigation and remedial action for the soil contaminated with petroleum hydrocarbons (oil/waste oil) by the former drainpipe outlet, steam-cleaning pad and underground fuel tank areas at the above referenced address. Approximately 2500 cubic yards of contaminated soil was excavated and bioremediated at the site. The treated soil will be used for road base within the Eliot plant site.

Based upon the available information and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the surface contamination by waste oil is required. Be advised that the two groundwater monitoring wells (MW-1 and MW-1A) installed as part of the subsurface investigation should be properly decommissioned if they will no longer be used. Well destruction permits may be obtained from Alameda County Flood Control and Water Conservation, Zone 7. They can be reached at (925) 484-2600.

If you have any further questions concerning this matter, please contact Ms. eva chu at (510) 567-6762.

Sincerely,

Mee Ling Tung
Director
