

1/6/93

① Meeting with Jeff + Pam about the work plan executed.

② All the sampling results came back + all below cleanup levels set up by Ravi + me

③ Issues

④ This time they also hit lindane. They feel it is because the detection limit has been significantly lowered. So I

⑤ need to check clean up levels for lindane. If conc are less than lit as ^{OK a more sample} needed to characterize

⑥ I wanted them to bring up all Or/W issues.

⑦ Check wells in neighbouring wells of ever used for agriculture. State the beneficial/or otherwise use of water in proposed closure plan

⑧ Check why only diesel was sampled near tank area. Need proof that the above brown tank was diesel.

If all the above issues are addressed, then OK - - closure can be given.

2/11/94 -> Reviewed Case Closure Report
left a message for Jeff Nelson.
~~but~~ I have some questions about
ground water issue.

1. Tract Supply well
Is the monitoring well 15' there? Properly
abandon the well - flood control
channel. -> If MW's are there, don't abandon
now - copy of this -
2. Tract - 6078 - Tank Closure ->
they fine

3.
