SUBJECT: Field sampling and analysis at Schwabacher/Frey,
5733 Paladeau Street, Emeryville, California
Alameda

Dear Dick Burg:

Enclosed are the results for the analysis of soil samples taken from excavation holes at the subject facility. This site presented one 2000 gallon diesel tank 6.5' in diameter which rested 8.5' below grade. George Warren of the city of Emeryville was present to observe and direct the sampling. The attached plot plan shows the approximate location of the tank in respect to the facility.

The tank appeared to have two corrosion holes on its side 2 and 8" long at half height. The soil under the tank appeared to be contaminated with product. Samples were taken at 11 feet depth.

Sampling was performed in accordance with approved methodology. The samples were obtained in zero headspace brass tubes which were sealed, logged, chilled and transported to the laboratory for same day analysis.

The samples were analysed in accordance with approved methodology. The results are presented on page three of this report.

Reportage

Submission to the Regional Water Quality Control Board and the City of Emeryville should include copies of this report. The property owner should attach a cover letter and submit all documents together in a package.

The following addresses have been listed for your convenience:

Water Quality Control Board
San Francisco Bay Region
