Subject: CPL Sunol Site Monthly GW Gauging Event Update

Jerry, we conducted our monthly GW gauging event yesterday and I thought I would provide an informal update to the recent Closure Request Submittal and our Semi-annual GW monitoring report submitted in October 7, 2013.

Our staff did not observe any sheen on any of the wells, nor did they detect any gasoline odor during the GW gauging.

The four new GW monitoring wells along Calaveras Road still do not have enough water to develop the wells. Also, the wells do not have enough water to support low-flow sampling techniques, so only grab groundwater sampling techniques can be used. The maximum depth of water was 0.67 feet in well MW-12.

If you have any questions during your review of our Closure Request or Semi-annual Report, please call me.

Joe
