Re: Former Standard Oil Service Station 307233
2259 First Street
Livermore, California
ACEHS Case RO0002908

I accept the *Interim Remedial Action Plan*.

I agree with the scope of work presented in this document. The information included is accurate to the best of my knowledge, and appears to meet local agency and Regional Board guidelines. This document was prepared by GHD Services, Inc., upon whose assistance and advice I have relied.

This letter is submitted pursuant to the requirements of California Water Code Section 13267(b)(1) and the regulating implementation entitled Appendix A pertaining thereto.

I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge.

Sincerely,

Carryl MacLeod
Project Manager

1. Introduction

GHD Services Inc. (GHD) is submitting this *Interim Remedial Action Plan* (IRAP) for former Standard Oil Service Station 307233 located at 2259 First Street in Livermore, California (Figure 1) on behalf of Chevron Environmental Management Company (CEMC). In correspondence dated June 4, 2015 (Attachment A), Alameda County Environmental Health (ACEH) approved CRA's *Work Plan for Lead Delineation in Soil,* and requested that an IRAP be prepared. Subsequent ACEH correspondence dated August 27, 2015 (Appendix A) approved an extension for the submittal of the IRAP. A summary of the site background, low-threat closure evaluation, updated lead risk evaluation, and the IRAP are presented below.

2. Site Background

2.1 Site Description

The site is located on the eastern corner of First Street and South Livermore Avenue in Livermore, California (Figure 1). The earliest available aerial photograph from 1959 shows a gasoline service station building located on the southern edge of the property and two dispenser islands located on the western portion of the property. A 1973 aerial photograph indicates that the station building and dispenser islands had been removed, leaving an unoccupied paved lot. The City of Livermore purchased the site in 1974. By 1978, the Property had been redeveloped as Mills Square Park (Figure 2). The park remains in the same configuration as shown on a 1978 aerial photograph. The park consists of grass and trees with a paved walkway and gazebo. Land use surrounding the park is primarily commercial.

Since acquiring the Property from Standard Oil in 1974, the City has renovated the park on several occasions requiring digging and regrading (Appendix B). During the redevelopment activities, it is likely that lead-impacted fill was imported to the Property and/or spread across the Property. Fugro West Inc., the City's consultant for the redevelopment process in 2004, concluded in a January 6, 2004 *Soil and Groundwater Investigation Report* (Appendix B) that the source of the lead impacts at the Property was "unknown to Fugro," but "likely related to fill material at the Site".

2.2 Site Geology and Hydrogeology

The site is approximately 485 feet above mean sea level and regional topography slopes gently to the north. According to the September 2005 *Groundwater Management Plan* prepared by the Zone 7 Water Agency (Zone 7), the site is located in the Mocho II Sub-Basin of the Main Livermore-Amadore Valley Groundwater Basin. Zone 7 Water Agency extracts groundwater from this basin for municipal drinking water. Sediments in this basin are described as recent alluvium consisting of sandy gravel and sandy clayey gravel from the surface to approximately 150 feet below grade (fbg). This alluvium overlies the Livermore Formation.

Sediments encountered beneath the site during subsurface investigation consist of silty sand, silty gravel, and sandy gravel from the surface to approximately 9 fbg. Silt and clay are encountered between approximately 9 and 45 fbg, and sand and gravel are predominately encountered from approximately 45 fbg to the total depth explored of 62 fbg.

A current network of 12 onsite and offsite wells monitor groundwater in two water-bearing zones that have been identified below the site; Zone A at approximately 28 to 40 fbg and Zone B at approximately 55 fbg. Zone A is believed to be a seasonal perched zone that is not horizontally continuous across the site, as it was only encountered in the southern and eastern portions of the site, and wells MW-7 and MW-8 had insufficient groundwater to sample during the most recent sampling event. Groundwater in shallow Zone A ranges from approximately 25 to 37 fbg and flows toward the southwest. Groundwater in deeper Zone B is confined, ranges from approximately 27 to 38 fbg, and flows toward the northwest.

2.3 Remedial Actions and Current Site Conditions

Environmental assessment and remediation has been ongoing since 2003, beginning with an investigation initiated by the City of Livermore Engineering Division to assess soil and groundwater conditions prior to further development to the park. To date, 61 soil borings, 3 dual nested soil vapor probes and 12 wells have been installed. In 2005, one orphaned underground storage tank (UST) was removed and in 2007, two orphaned USTs and associated product piping were removed. A chronological summary of environmental investigation and remediation conducted to date is presented in Appendix C. The locations of all known monitoring wells, soil borings, and former USTs are presented on Figures 2 and 3.

Former UST locations and associated excavations are shown on Figure 2. Residual lead concentrations that will be removed during park renovations are shown on Figure 4. The extent of residual lead concentrations in soil remaining after the City's planned excavation associated with the park renovation are shown on Figure 5. Profile views showing the extent of lead concentrations, assumed excavation depths are shown on Figures 6 through 8. The management of excavated soil is described in the sections below.

3. Updated Lead Risk Evaluation

Lead data collected to date (Table 1) was used to perform a Tier 3 lead risk evaluation (RE). Risk exposure scenarios for child park users and commercial workers were evaluated following US Environmental Protection Agency (USEPA) and Department of Toxic Substances Control (DTSC) guidelines. Results of the evaluation show that the levels of lead within the soil beneath the park will not result in a concern for either a child or commercial worker. A more detailed summary of the RE and calculation tables are presented in Appendix D.

4. Soil Management during Park Renovation

Based on information provided by the City, the current park will be undergoing extensive renovations on behalf of the City and be renamed Livermorium Park/Plaza. A description of the renovation and procedures associated with the management of excavated soil are summarized below.

4.1 Description of Surface Cap

The majority of the site will be hardscaped (concrete or pavers) with the exception of a landscaped area in the western corner of the site (Appendix E). Further details on the hardscaping have not been provided by the City to date. Based on the design plans provided by the City, it is assumed

that the surface soil in the western corner landscaping will be replaced with new organically amended soil to promote growth for the new landscaping plants/trees. It is also assumed that the landscaped areas shown in the sidewalks along First Street and Livermore Avenue will not change or be similar to the current landscaping (flagstone sidewalk with trees planted in small exposed areas covered by steel grates).

4.2 Health and Safety Plan

A site-specific health and safety plan should be prepared by the contractor performing subsurface work, including excavation and grading, that addresses the proper safety of site workers and the public. In addition to specifying proper personal protection equipment (PPE) and monitoring equipment, establishing an exclusion zone around the work area needs to be included to prevent access to disturbed areas by the public during excavation activities.

4.3 Excavation and Grading Protocols

It is our understanding that the proposed renovations will require removal of approximately 1,400 cubic yards of soil from the site to facilitate sub-grade depth (assumed to be approximately 488 amsl) for the hardscaping, proposed depths for footings (for artwork and benches), removal of existing tree roots, and planting of new landscaping. Based on design plans provided by the City, it is assumed that soil excavated from the site will be disposed of offsite and new certified clean material (soil, engineered fill, concrete) will be used to replace the excavated soil. Excavated soils should not be used as surface fill or reused at another site.

During any activities disturbing site soils, it is recommended that water be applied on ground surfaces and/or uncovered soil stockpiles as needed such that there are no visible dust emissions beyond the construction zone boundary and no exceedances of the perimeter dust monitoring trigger levels. Although it is not anticipated that odor control will be necessary, in the event it is, odor control measures should consist of adding odor control agents such as simple green, Bio-Solve and/or F-500 to the dust suppression water.

The above procedures should also be followed if future repairs to new site utilities/landscaping are needed and extend below the base of the surface cap.

4.4 Management of Excavated Materials

Based on design plans provided by the City, it is assumed that any soil excavated from the site will be disposed of at an appropriately permitted disposal facility and not reused on or offsite. Based on waste disposal profiles from previous environmental investigation at the site, it is likely that any soil excavated during site renovation activities can be disposed of as non-hazardous. However, to facilitate any future soil disposal, GHD proposes to collect 4-point composite samples across the site that would facilitate soil disposal profiling of approximately 1,400 cubic yards.

4.5 Inspection and Maintenance of the Surface Cap

It is recommended that the surface cap be inspected annually at a minimum to ensure the integrity is maintained. If maintenance is required, ACEH should be notified and the repairs made in a timely manner following the appropriate procedures outlined above.

4.6 Institutional Controls

No institutional controls beyond what is described in the sections below are recommended.

4.7 Required Notifications and Approvals

Notification and approval by ACEH are required prior to implementation of any activities that disturb the surface cap or the subsurface. ACEH can be contacted at (510) 337-9335. Reference Fuel Leak Case RO0002908.

4.8 Contingency Plan

Based on data collected during previous investigation (soil borings, wells, and UST removal) and surveys performed by private utility locators using ground penetrating radar, it is not expected that any unknown features of environmental concern will be encountered during park renovation. However, in the event that unknown features of environmental concern are encountered during park renovation activities, the following steps should be implemented:

- Immediately stop work
- Notify ACEH at (510) 337-9335, reference Fuel Leak Case RO0002908
- Notify CEMC at (800) 338-5434, reference former Standard Oil Station 307233
- Do not proceed with work until approval from ACEH and CEMC is obtained

Additional contingency plan information is also included in CRA's previously submitted *Soil and Groundwater Management Plan*, dated May 2013 and included as Appendix F.

5. Low-Threat UST Case Closure Policy Evaluation

On August 17, 2012, the State Water Resource Control Board (SWRCB) adopted the low-threat UST case closure policy via Resolution 2012-0016. The intent of the policy is to increase cleanup process efficiency at petroleum release sites. A benefit of improved efficiency is the preservation of limited resources for mitigation of releases posing the greatest threat to human and environmental health. Under the policy, sites that meet the specified general and media-specific criteria pose a low threat to human health, safety, and the environment and are appropriate for case closure pursuant to Health and Safety Code section 25296.10. The policy further states that those sites that meet the criteria for low-threat closure do not require further corrective action and shall be issued a uniform closure letter. The general and media-specific criteria are described in Appendix G.

Based on the information presented in this and previous reports, site conditions meet the general and media-specific criteria of a low-threat UST release case established in the policy, and therefore pose a low threat to human health, safety, and the environment. A completed SWRCB low-threat checklist is included as Appendix E. The site satisfies the case closure requirements of Health and Safety Code section 25296.10, and case closure is consistent with Resolution 92-49 that requires cleanup goals be met within a reasonable time frame. Therefore, on behalf of CEMC, GHD

respectfully requests ACEH grant case closure. Upon ACEH approval, GHD will coordinate and schedule the destruction of all site wells per Zone 7 Water Agency guidelines.

Subject: Case File Review for Fuel Leak Case No. RO0002908 and GeoTracker Global ID T0600196622, Miller Square Park, 2259 First Street, Livermore, CA 94550

Dear Ms. MacLeod and Mr. Uranga:

Alameda County Environmental Health (ACEH) staff has reviewed the fuel leak case file for the above referenced site including the document entitled, "*Work Plan for Lead Delineation in Soil*," dated June 1, 2015 (Work Plan). The Work Plan presents plans to collect soil samples to determine the extent of lead in shallow soil and to collect one grab groundwater sample to delineate the downgradient extent of petroleum hydrocarbons in groundwater.

The proposed scope of work is conditionally approved and may be implemented provided that the technical comments below are incorporated during implementation of the proposed work. Submittal of a revised Work Plan or Work Plan Addendum is not required unless an alternate scope of work outside that described in the Work Plan and technical comments below is proposed. We request that you address the following technical comments, perform the proposed work, and send us the reports described below.

TECHNICAL COMMENTS

1. **Soil Sample Analysis**. The proposal to analyze the soil samples collected within the park for lead using EPA Method 6010 is acceptable. However, we request that the soil samples also be screened in the field with a photoionization detector (PID). If the PID screening indicates that volatile organic compounds may be present or the soil samples have visual evidence of contamination or odor, we request that the soil samples also be analyzed for total petroleum hydrocarbons as gasoline and diesel using EPA Method 8015 or 8260 and benzene, toluene, ethylbenzene, xylenes, and naphthalene using EPA method 8260.

2. **Project Schedule**. The project schedule was discussed on May 5, 2015 during a meeting between representatives of Chevron Environmental Management Company, the City of Livermore, and ACEH. The project schedule in the Work Plan is generally consistent with the schedule discussed on May 5, 2015. Submittal of the results of the proposed work and an Interim Remedial Action Plan (IRAP) on August 13, 2015 is acceptable. The ACEH review period for the IRAP that was discussed on May 5, 2015 was 14 days ending on August 27, 2015 and the public notification period was 30 days ending on September 27, 2015.

TECHNICAL REPORT REQUEST

Please upload technical reports to the ACEH ftp site (Attention: Jerry Wickham), and to the State Water Resources Control Board's GeoTracker website according to the following schedule and file-naming convention:

- **August 13, 2015** – Sampling Results Report and Interim Remedial Action Plan
  File to be named: SWI_IRAP_R_yyyy-mm-dd RO2908

These reports are being requested pursuant to California Health and Safety Code Section 25296.10. 23 CCR Sections 2652 through 2654, and 2721 through 2728 outline the responsibilities of a responsible party in response to an unauthorized release from a petroleum UST system, and require your compliance with this request.

If you have any questions, please call me at (510) 567-6791 or send me an electronic mail message at jerry.wickham@acgov.org.

Sincerely,

Jerry Wickham, California PG 3766, CEG 1177, and CHG 297

Attachment 1

Responsible Party(ies) Legal Requirements / Obligations

REPORT REQUESTS

These reports are being requested pursuant to California Health and Safety Code Section 25296.10. 23 CCR Sections 2652 through 2654, and 2721 through 2728 outline the responsibilities of a responsible party in response to an unauthorized release from a petroleum UST system, and require your compliance with this request.

ELECTRONIC SUBMITTAL OF REPORTS

ACEH's Environmental Cleanup Oversight Programs (LOP and SLIC) require submission of reports in electronic form. The electronic copy replaces paper copies and is expected to be used for all public information requests, regulatory review, and compliance/enforcement activities. Instructions for submission of electronic documents to the Alameda County Environmental Cleanup Oversight Program FTP site are provided on the attached "Electronic Report Upload Instructions." Submission of reports to the Alameda County FTP site is an addition to existing requirements for electronic submittal of information to the State Water Resources Control Board (SWRCB) GeoTracker website. In September 2004, the SWRCB adopted regulations that require electronic submittal of information for all groundwater cleanup programs. For several years, responsible parties for cleanup of leaks from underground storage tanks (USTs) have been required to submit groundwater analytical data, surveyed locations of monitoring wells, and other data to the GeoTracker database over the Internet. Beginning July 1, 2005, these same reporting requirements were added to Spills, Leaks, Investigations, and Cleanup (SLIC) sites. Beginning July 1, 2005, electronic submittal of a complete copy of all reports for all sites is required in GeoTracker (in PDF format). Please visit the SWRCB website for more information on these requirements (http://www.waterboards.ca.gov/water_issues/programs/ust/electronic_submittal/).

PERJURY STATEMENT

All work plans, technical reports, or technical documents submitted to ACEH must be accompanied by a cover letter from the responsible party that states, at a minimum, the following: "I declare, under penalty of perjury, that the information and/or recommendations contained in the attached document or report is true and correct to the best of my knowledge." This letter must be signed by an officer or legally authorized representative of your company. Please include a cover letter satisfying these requirements with all future reports and technical documents submitted for this fuel leak case.

PROFESSIONAL CERTIFICATION & CONCLUSIONS/RECOMMENDATIONS

The California Business and Professions Code (Sections 6735, 6835, and 7835.1) requires that work plans and technical or implementation reports containing geologic or engineering evaluations and/or judgments be performed under the direction of an appropriately registered or certified professional. For your submittal to be considered a valid technical report, you are to present site specific data, data interpretations, and recommendations prepared by an appropriately licensed professional and include the professional registration stamp, signature, and statement of professional certification. Please ensure all that all technical reports submitted for this fuel leak case meet this requirement.

UNDERGROUND STORAGE TANK CLEANUP FUND

Please note that delays in investigation, later reports, or enforcement actions may result in your becoming ineligible to receive grant money from the state's Underground Storage Tank Cleanup Fund (Senate Bill 2004) to reimburse you for the cost of cleanup.

AGENCY OVERSIGHT

If it appears as though significant delays are occurring or reports are not submitted as requested, we will consider referring your case to the Regional Board or other appropriate agency, including the County District Attorney, for possible enforcement actions. California Health and Safety Code, Section 25299.76 authorizes enforcement including administrative action or monetary penalties of up to $10,000 per day for each day of violation.

Alameda County Environmental Cleanup Oversight Programs (LOP and SLIC)	**REVISION DATE:** May 15, 2014
	ISSUE DATE: July 5, 2005
	PREVIOUS REVISIONS: October 31, 2005; December 16, 2005; March 27, 2009; July 8, 2010, July 25, 2010
SECTION: Miscellaneous Administrative Topics & Procedures	**SUBJECT:** Electronic Report Upload (ftp) Instructions

The Alameda County Environmental Cleanup Oversight Programs (LOP and SLIC) require submission of all reports in electronic form to the county's ftp site. Paper copies of reports will no longer be accepted. The electronic copy replaces the paper copy and will be used for all public information requests, regulatory review, and compliance/enforcement activities.

REQUIREMENTS

- **Please do not submit reports as attachments to electronic mail.**
- Entire report including cover letter must be submitted to the ftp site as **a single portable document format (PDF) with no password protection**.
- It is **preferable** that reports be converted to PDF format from their original format, (e.g., Microsoft Word) rather than scanned.
- **Signature pages and perjury statements must be included and have either original or electronic signature.**
- **Do not password protect the document**. Once indexed and inserted into the correct electronic case file, the document will be secured in compliance with the County's current security standards and a password. **Documents with password protection will not be accepted**.
- Each page in the PDF document should be rotated in the direction that will make it easiest to read on a computer monitor.
- Reports must be named and saved using the following naming convention:

  RO#_Report Name_Year-Month-Date (e.g., RO#5555_WorkPlan_2005-06-14)

Submission Instructions

1) Obtain User Name and Password
   a) Contact the Alameda County Environmental Health Department to obtain a User Name and Password to upload files to the ftp site.
      i) Send an e-mail to deh.loptoxic@acgov.org
   b) In the subject line of your request, be sure to include **"ftp PASSWORD REQUEST"** and in the body of your request, include the **Contact Information, Site Addresses**, and the **Case Numbers (RO# available in Geotracker) you will be posting for**.

2) Upload Files to the ftp Site
   a) Using Internet Explorer (IE4+), go to ftp://alcoftp1.acgov.org
      (i) Note: Netscape, Safari, and Firefox browsers will not open the FTP site as they are NOT being supported at this time.
   b) Click on Page located on the Command bar on upper right side of window, and then scroll down to Open FTP Site in Windows Explorer.
   c) Enter your User Name and Password. (Note: Both are Case Sensitive.)
   d) Open "My Computer" on your computer and navigate to the file(s) you wish to upload to the ftp site.
   e) With both "My Computer" and the ftp site open in separate windows, drag and drop the file(s) from "My Computer" to the ftp window.

3) Send E-mail Notifications to the Environmental Cleanup Oversight Programs
   a) Send email to deh.loptoxic@acgov.org notify us that you have placed a report on our ftp site.
   b) Copy your Caseworker on the e-mail. Your Caseworker's e-mail address is the entire first name then a period and entire last name @acgov.org. (e.g., firstname.lastname@acgov.org)
   c) The subject line of the e-mail must start with the RO# followed by **Report Upload**. (e.g., Subject: RO1234 Report Upload) If site is a new case without an RO#, use the street address instead.
   d) If your document meets the above requirements and you follow the submission instructions, you will receive a notification by email indicating that your document was successfully uploaded to the ftp site.

Subject: Schedule Extension for Fuel Leak Case No. RO0002908 and GeoTracker Global ID T0600196622, Miller Square Park, 2259 First Street, Livermore, CA 94550

Dear Ms. MacLeod and Mr. Uranga:

In a Notice to Comply dated August 20, 2015, Alameda County Environmental Health (ACEH) indicated that this case is out of compliance with directives from this agency. In order to regain compliance with directives from this agency and avoid enforcement actions including issuance of a Notice of Violation, ACEH requested that you submit the previously requested "*Sampling Results Report,"* and *"Interim Remedial Action Plan,*" no later than September 3, 2015. The purpose of these documents is to address lead in shallow soil at the park site.

We have received a proposed alternate schedule in correspondence from Chevron Environmental Management Company (Chevron) dated August 26, 2015 (attached). The schedule proposed by Chevron appears to be a reasonable effort to complete the necessary work. Therefore, ACEH agrees that a Notice of Violation will not be issued if the "*Sampling Results Report,*" is submitted no later than November 5, 2015 and the *"Interim Remedial Action Plan,*" is submitted no later than November 19, 2015.

TECHNICAL REPORT REQUEST

Please upload technical reports to the ACEH ftp site (Attention: Jerry Wickham), and to the State Water Resources Control Board's GeoTracker website according to the following schedule and file-naming convention:

- **November 5, 2015** – Sampling Results Report
  File to be named: SWI_R_yyyy-mm-dd RO2908

- **November 19, 2015** – Interim Remedial Action Plan
  File to be named: IRAP_R_yyyy-mm-dd RO2908

These reports are being requested pursuant to California Health and Safety Code Section 25296.10. 23 CCR Sections 2652 through 2654, and 2721 through 2728 outline the responsibilities of a responsible party in response to an unauthorized release from a petroleum UST system, and require your compliance with this request.

If you have any questions, please call me at (510) 567-6791 or send me an electronic mail message at jerry.wickham@acgov.org.

Sincerely,

Jerry Wickham, California PG 3766, CEG 1177, and CHG 297

Re: 307233 Livermore/ Mills Square Park 2259 First Street

Dear Mr. Wickham:

In a letter dated August 20, 2015 (Attachment), Alameda County Environmental Health (ACEH) requested Chevron Environmental Management Company ("EMC") and the City of Livermore (City) submit the Sampling Results Report (Report) to regain compliance by September 3, 2015.

In an effort to comply with ACEH's request, EMC's consultant GHD (formerly known as CRA), has scheduled the C-57 license driller for the week of September 14, 2015 to conduct the work as outlined in the prepared work plan for shallow lead delineation submitted June 1, 2015.

Upon completion of the field activities, GHD will prepare and submit the Report 45 days following the completion of the work. Following submittal of the Sampling Results Report, GHD will prepare and submit an Interim Remedial Action Plan two weeks later.

EMC respectfully requests an extension on the submittal of the Sampling Results Report and Interim Remedial Action Plan.

If you have any further questions, please do not hesitate to contact me at (925) 790-6506, or cmacleod@chevron.com.

Sincerely,

Carryl MacLeod
Project Manager

Responsible Party(ies) Legal Requirements / Obligations

REPORT REQUESTS

These reports are being requested pursuant to California Health and Safety Code Section 25296.10. 23 CCR Sections 2652 through 2654, and 2721 through 2728 outline the responsibilities of a responsible party in response to an unauthorized release from a petroleum UST system, and require your compliance with this request.

ELECTRONIC SUBMITTAL OF REPORTS

ACEH's Environmental Cleanup Oversight Programs (LOP and SLIC) require submission of reports in electronic form. The electronic copy replaces paper copies and is expected to be used for all public information requests, regulatory review, and compliance/enforcement activities. Instructions for submission of electronic documents to the Alameda County Environmental Cleanup Oversight Program FTP site are provided on the attached "Electronic Report Upload Instructions." Submission of reports to the Alameda County FTP site is an addition to existing requirements for electronic submittal of information to the State Water Resources Control Board (SWRCB) GeoTracker website. In September 2004, the SWRCB adopted regulations that require electronic submittal of information for all groundwater cleanup programs. For several years, responsible parties for cleanup of leaks from underground storage tanks (USTs) have been required to submit groundwater analytical data, surveyed locations of monitoring wells, and other data to the GeoTracker database over the Internet. Beginning July 1, 2005, these same reporting requirements were added to Spills, Leaks, Investigations, and Cleanup (SLIC) sites. Beginning July 1, 2005, electronic submittal of a complete copy of all reports for all sites is required in GeoTracker (in PDF format). Please visit the SWRCB website for more information on these requirements (http://www.waterboards.ca.gov/water_issues/programs/ust/electronic_submittal/).

PERJURY STATEMENT

All work plans, technical reports, or technical documents submitted to ACEH must be accompanied by a cover letter from the responsible party that states, at a minimum, the following: "I declare, under penalty of perjury, that the information and/or recommendations contained in the attached document or report is true and correct to the best of my knowledge." This letter must be signed by an officer or legally authorized representative of your company. Please include a cover letter satisfying these requirements with all future reports and technical documents submitted for this fuel leak case.

PROFESSIONAL CERTIFICATION & CONCLUSIONS/RECOMMENDATIONS

The California Business and Professions Code (Sections 6735, 6835, and 7835.1) requires that work plans and technical or implementation reports containing geologic or engineering evaluations and/or judgments be performed under the direction of an appropriately registered or certified professional. For your submittal to be considered a valid technical report, you are to present site specific data, data interpretations, and recommendations prepared by an appropriately licensed professional and include the professional registration stamp, signature, and statement of professional certification. Please ensure all that all technical reports submitted for this fuel leak case meet this requirement.

UNDERGROUND STORAGE TANK CLEANUP FUND

Please note that delays in investigation, later reports, or enforcement actions may result in your becoming ineligible to receive grant money from the state's Underground Storage Tank Cleanup Fund (Senate Bill 2004) to reimburse you for the cost of cleanup.

AGENCY OVERSIGHT

If it appears as though significant delays are occurring or reports are not submitted as requested, we will consider referring your case to the Regional Board or other appropriate agency, including the County District Attorney, for possible enforcement actions. California Health and Safety Code, Section 25299.76 authorizes enforcement including administrative action or monetary penalties of up to $10,000 per day for each day of violation.

Alameda County Environmental Cleanup Oversight Programs (LOP and SLIC)	**REVISION DATE:** May 15, 2014
	ISSUE DATE: July 5, 2005
	PREVIOUS REVISIONS: October 31, 2005; December 16, 2005; March 27, 2009; July 8, 2010, July 25, 2010
SECTION: Miscellaneous Administrative Topics & Procedures	**SUBJECT:** Electronic Report Upload (ftp) Instructions

The Alameda County Environmental Cleanup Oversight Programs (LOP and SLIC) require submission of all reports in electronic form to the county's ftp site. Paper copies of reports will no longer be accepted. The electronic copy replaces the paper copy and will be used for all public information requests, regulatory review, and compliance/enforcement activities.

REQUIREMENTS

- **Please do not submit reports as attachments to electronic mail.**
- Entire report including cover letter must be submitted to the ftp site as **a single portable document format (PDF) with no password protection**.
- It is **preferable** that reports be converted to PDF format from their original format, (e.g., Microsoft Word) rather than scanned.
- **Signature pages and perjury statements must be included and have either original or electronic signature.**
- **Do not password protect the document**. Once indexed and inserted into the correct electronic case file, the document will be secured in compliance with the County's current security standards and a password. **Documents with password protection will not be accepted**.
- Each page in the PDF document should be rotated in the direction that will make it easiest to read on a computer monitor.
- Reports must be named and saved using the following naming convention:

  RO#_Report Name_Year-Month-Date (e.g., RO#5555_WorkPlan_2005-06-14)

Submission Instructions

1) Obtain User Name and Password
   a) Contact the Alameda County Environmental Health Department to obtain a User Name and Password to upload files to the ftp site.
      i) Send an e-mail to deh.loptoxic@acgov.org
   b) In the subject line of your request, be sure to include **"ftp PASSWORD REQUEST"** and in the body of your request, include the **Contact Information, Site Addresses**, and the **Case Numbers (RO# available in Geotracker) you will be posting for**.

2) Upload Files to the ftp Site
   a) Using Internet Explorer (IE4+), go to ftp://alcoftp1.acgov.org
      (i) Note: Netscape, Safari, and Firefox browsers will not open the FTP site as they are NOT being supported at this time.
   b) Click on Page located on the Command bar on upper right side of window, and then scroll down to Open FTP Site in Windows Explorer.
   c) Enter your User Name and Password. (Note: Both are Case Sensitive.)
   d) Open "My Computer" on your computer and navigate to the file(s) you wish to upload to the ftp site.
   e) With both "My Computer" and the ftp site open in separate windows, drag and drop the file(s) from "My Computer" to the ftp window.

3) Send E-mail Notifications to the Environmental Cleanup Oversight Programs
   a) Send email to deh.loptoxic@acgov.org notify us that you have placed a report on our ftp site.
   b) Copy your Caseworker on the e-mail. Your Caseworker's e-mail address is the entire first name then a period and entire last name @acgov.org. (e.g., firstname.lastname@acgov.org)
   c) The subject line of the e-mail must start with the RO# followed by **Report Upload**. (e.g., Subject: RO1234 Report Upload) If site is a new case without an RO#, use the street address instead.
   d) If your document meets the above requirements and you follow the submission instructions, you will receive a notification by email indicating that your document was successfully uploaded to the ftp site.

Subject: Soil and Groundwater Investigation Report
Regional Performing Arts Theater Site
Livermore, California

Dear Mr. Snedecor:

With this letter, Fugro West, Inc. (Fugro) presents the results of the soil and groundwater investigation conducted during September 2003 at the referenced site. The purpose of this work was to investigate the potential presence of petroleum hydrocarbons in soil and/or groundwater at the site resulting from the historical use of the site as a service station. This work was conducted on behalf of the City of Livermore (City) as part of the City's redevelopment process. The Site location is illustrated on Plates 1 and 2.

BACKGROUND

Fugro understands that the City of Livermore (City) is considering the purchase of seven parcels that may comprise the future Regional Performing Arts Theater site. Fugro previously completed a Phase 1 Environmental Site Assessment (ESA) dated February 14, 2003, for these parcels. Based on those findings, Fugro recommended completing a subsurface investigation to evaluate soil and groundwater conditions at the Site for the purpose of evaluating potential impacts from the former on-site service station operations.

FIELD INVESTIGATION

Prior to drilling activities, Fugro procured a drilling permit from the Alameda County Zone 7 Water Agency. We also requested borehole clearance by Underground Service Alert (USA) and from a private utility locator at the proposed boring locations.

On September 17, 2003, Fugro advanced three soil probes (B-1 to B-3) to depths of approximately 40 feet below ground surface (bgs) using a limited-access hollow stem auger rig. The driller placed all of the cuttings from the drilling operations into labeled, 55-gallon drums which are stored on adjacent City property pending disposal.

Fugro's field geologist observed drilling operations and prepared detailed logs of the conditions encountered during drilling. Fugro collected soil samples and screened them in the field using an organic vapor meter (OVM) as well as olfactory methods. Soils were classified in accordance with the United Soil Classification System (USCS). Grab groundwater samples were also collected from Borings B-1 through B-3. Upon completions, borings were grouted with neat cement in accordance with permit requirements and the landscaping returned to pre-sampling conditions.

Subsurface Conditions

Based on our field observations, near-surface fill comprised of sand, gravel, silt, brick fragments and concrete debris was encountered from just below the sod to approximately 8 to 14 feet bgs. Near surface fill was underlain with interbedded silty sand, sand, and sandy clay in Borings B-1 through B-3 to approximately 40 feet below ground surface (bgs), the maximum depth explored. Groundwater was encountered in each boring approximately 34 feet bgs during drilling. No free phase hydrocarbons were observed. It should be noted the borings may not have been left open for a sufficient period of time to establish equilibrium groundwater conditions.

Slight staining and hydrocarbon odors were observed in Boring B-2 and Boring B-3 at approximately 23 feet bgs. Field screening of soil samples detected an OVM reading of 1.7 parts per million (ppm) for the soil sample obtained at 30 bgs in Boring B-2.

CHEMICAL TESTING PROGRAM

Soil and grab groundwater samples were retained in containers pre-cleaned by the supplier in accordance with EPA protocol. The samples were placed in a chilled cooler and transported under appropriate chain-of-custody documentation to STL, a State-certified laboratory. Selected samples were submitted for some or all of the following analyses:

- Total petroleum hydrocarbons as gasoline (TPHg) and benzene, toluene, ethylbenzene, and xylenes (BTEX) and Methyl tert butyl ether (MTBE) using EPA Method 8015m / 8020,
- Total petroleum hydrocarbons as diesel and motor oil (TPHd and TPHmo) using EPA Method 8015m and silica gel cleanup, and
- Total lead using EPA Methods 6010.

Based on the total lead results, soluble lead was also conducted on sample B-2@3' using the Toxicity Leachability Characteristic Proceedure (TCLP).

DISCUSSION OF RESULTS

The analytical testing results for the current field investigation and sampling event are summarized in Table 1 and 2. The analytical reports are presented in Appendix B.

Soil Samples

Except for 9.6 milligrams per kilogram (mg/kg) of TPHd and 3.5 mg/kg of TPHg detected in B-2@30', analyses detected no TPHd, TPHmo, TPHg, BTEX, or MTBE concentrations in soil samples from Borings B-1, B-2, and B-3. The detected TPHd and TPHg concentrations are significantly less than 100 mg/kg, the Environmental Screening Level (ESL) established by the Regional Water Quality Control Board[1] for a residential or commercial setting. Analyses detected 3,700 mg/kg of total lead sample B-2@3', which is significantly greater than ESL[2] criteria for a residential and commercial setting as well as greater than the Total Threshold Limit Concentration (TTLC), one of the criteria used by the State of California to determine whether a soil is considered a hazardous waste for disposal purposes. Analyses for soluble lead using TCLP methods detected no soluble lead in sample B-2@3'.

Grab Groundwater Samples

Analyses detected no TPHmo and MTBE concentrations in the grab groundwater samples from Borings B-1, B-2, and B-3. Analysis detected 1,100 mg/kg of TPHd and 1,600 mg/kg of TPHg in the grab groundwater sample from Boring B-1; 57 mg/kg of TPHd and 90 mg/kg of TPHg in the grab groundwater sample from Boring B-2; and 42,000 mg/kg of TPHd and 18,000 mg/kg of TPHg in the grab groundwater sample from Boring B-3. The detected TPHd and TPHg concentrations in the grab groundwater samples from Boring B-1 and B-2 exceed respective ESLs for drinking water and for ecological receptors at a surface water body. However, groundwater at the site is not considered a source of drinking water and does not discharge to a surface water body. There are no established indoor air quality ESLs for TPHg and TPHd.

No BTEX concentrations were detected in the grab groundwater samples from Borings B-1 and B-2. In the grab groundwater sample from Boring B-3, analysis detected 140 mg/kg of benzene, 47 mg/kg of ethylbenzene, 120 mg/kg of toluene and 1,000 mg/kg of xylenes. Detected benzene and xylene concentrations exceed respective ESLs for drinking water and ecological receptors; however, groundwater at the site is not considered a source of drinking water and does not discharge to a surface water body. Detected TPHd and TPHg concentrations do not exceed respective indoor air quality ESLs.

CONCLUSIONS AND RECOMMENDATIONS

Results of this investigation detected the presence of total lead in near-surface fill material and concentrations of petroleum hydrocarbons, including benzene, and xylene in the groundwater. It is Fugro's opinion that these detected lead and petroleum hydrocarbons contaminants do not pose a significant adverse human health risk to park maintenance workers and City Park users at this time assuming the park is maintained in it's current condition, namely

[1] Table A of the Screening For Environmental Concerns at Sites with Contaminated Soil and Groundwater - Interim Final. San Francisco Bay Regional Water Quality Control Board. July 2003

[2] Table A, B and K-3 of the Screening For Environmental Concerns at Sites with Contaminated Soil and Groundwater - Interim Final. San Francisco Bay Regional Water Quality Control Board. July 2003

covered with pavement and sod, and that shallow groundwater at the site is not used as a source of drinking water. Because detected petroleum hydrocarbon concentrations do not exceed respective indoor air quality ELS criteria, the presence of petroleum hydrocarbons in groundwater at the site does not pose a significant human health risk for the anticipated possible future use as a performing arts theater.

The source of elevated lead concentration is unknown to Fugro but is likely related to the fill material at the site. The source of detected petroleum hydrocarbons in groundwater is likely associated with the historical service station operations at the site.

Based on our findings, Fugro presents the following recommendations for the City Park:

- If intrusive soil excavation or handling activities are conducted at the City Park, workers should be notified of the potential presence of elevated lead in shallow fill and appropriate dust mitigation should be implemented. Standard dust control methods such as the use of water spray should be sufficient to prevent exposure of workers to lead in the shallow fill.

- Based on the total lead results for sample B-2@3', if shallow fill is excavated from the site to be reused or disposed offsite, that soil should be tested to confirm that total lead concentrations are not hazardous for disposal purposes.

With respect to site redevelopment, Fugro presents the following recommendations:

- Results of this report should be provided to the developer and/or their contractor. Appropriate worker notification and a site-specific health and safety plan should be implemented to protect workers from lead in near-surface fill. In Fugro's opinion, standard dust control methods such as the use of water spray should be sufficient to prevent exposure of workers to lead in the shallow fill. The health and safety plan (HSP) should be prepared by a Certified Industrial Hygienist.

- If staining, chemical odors, or contaminated materials are encountered during the construction activities, we recommend that the City notify Fugro of such conditions and appropriate precautions, investigation, and/or mitigation should be implemented.

- Although it is Fugro's opinion that soil excavated from the site is likely non-hazardous for disposal purposes, results of analyses indicate the possibility that shallow fill may be considered a California Hazardous waste based on total lead concentrations exceeding 1,000 mg/kg. If soil is to be excavated from the site, Fugro recommends additional testing to confirm that disposal at a Class I hazardous waste landfill is not required.

LIMITATIONS

Fugro has prepared this report in a professional manner, using that degree of skill and care exercised for similar projects under similar conditions by reputable and competent environmental consultants. Fugro shall not be responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time the report was prepared. Fugro also notes that the facts and conditions referenced in this report may change over time and the conclusions and recommendations set forth herein are applicable only to the facts and conditions as described at the time of this report. Fugro believes that conclusions stated wherein to be factual, but no guarantee is made or implied. This report has been prepared for the benefit of the City of Livermore.

CLOSING STATEMENT

We believe this provides the information required at this time. Please call if you have any questions or if we can be of further assistance.

Sincerely,

FUGRO WEST, INC.

Appendix C
Summary of Previous Environmental Investigation

PREVIOUS ENVIRONMENTAL INVESTIGATION AND REMEDIATION
FORMER STANDARD OIL STATION 30-7233
2259 FIRST STREET, LIVERMORE, CALIFORNIA

September 2003 Investigation

The City of Livermore Engineering Division, as part of a redevelopment plan, retained Fugro West, Inc. (Fugro) to investigate soil and groundwater conditions beneath Mills Square Park to evaluate the potential presence of petroleum hydrocarbons resulting from the historic use of the site as a service station. Fugro advanced three soil borings onsite. Details can be found in Fugro's January 6, 2004 *Soil and Groundwater Investigation Report.*

September 2005 UST Removal

In September 2005, an orphan underground storage tank (UST) was encountered beneath the sidewalk on the southwest corner of the site. At the direction of the Livermore-Pleasanton Fire Department the UST was removed, soil samples collected, and the excavated soil was backfilled into the UST pit. Chevron was not involved with the tank removal and was contacted later by ACEH to investigate whether any other USTs remained in Mills Square Park. Additional information is available in Consolidated Engineering Laboratories' October 4, 2005, *Environmental Sampling, Testing and Evaluation of Soil* report.

August 2006 Geophysical Investigation

Cambria Environmental Technology, Inc. (Cambria), now Conestoga-Rovers & Associates (CRA), contracted NORCAL Geophysical Consultants, Inc. to determine if any USTs still remained in place. Two suspected tanks were identified in the southwest corner of the park, measuring approximately 5 by 7 feet and located approximately 3 feet below grade (fbg). More information is available in Cambria's December 22, 2006 *Subsurface Investigation Report*.

September and October 2006 Site Investigation

Cambria observed Woodward Drilling Company, Inc. advance borings SB1 through SB5 in the vicinity of the former dispenser islands and suspected USTs. More information is available in Cambria's December 22, 2006 *Subsurface Investigation Report*.

June 2007 Tank Removal

On June 20, 2007, CRA observed Gettler-Ryan Inc. remove two 750 gallon single-wall steel gasoline USTs (Tank 1 and Tank 2) and approximately 27 feet of associated product piping. CRA collected compliance soil samples from beneath the ends and middle of both Tank 1 and Tank 2 and from below the pipes protruding from the northwestern wall of the tank pit. More information is available in CRA's August 17, 2007 *Underground Storage Tank Removal and Compliance Sampling Report*.

January and February 2008 Site Investigation

CRA observed Gregg Drilling & Testing, Inc. (Gregg), RSI Drilling, and Vironex Environmental Field Services advance soil borings CPT1, CPT2 and SB6 through SB9, shallow soil borings SSB1 through SSB11 (for lead analysis), and install vapor probes VP-1 through VP 3, both on and offsite. More information is available in CRA's March 27, 2008 *Subsurface Investigation Report and Well Installation Workplan*.

October and November 2008 Site Investigation

CRA observed Gregg Drilling advance soil borings CPT3 through CPT5 and SB10 through SB12, both on and offsite. CRA re-sampled soil vapor probe VP1 to confirm previous soil vapor data. Additional information is available in CRA's March 5, 2009 *Subsurface Investigation Report*.

March and April 2010 Monitoring Well Installation:

On March 29 through April 12, 2010 CRA observed Gregg Drilling install deep wells MW-1 through MW-6 and shallow wells MW-7 through MW-9. Additional information is available in CRA's June 3, 2010 *Well Installation Report.*

2011 Corrective Action Plan

As requested by ACEH, CRA submittal a *Draft Corrective Action Plan* (CAP) dated May 3, 2011. In the CAP, CRA recommended monitored natural attenuation and additional site assessment to define the extent of hydrocarbons in groundwater. In response to the ACEH June 9, 2011 letter and a meeting with Jerry Wickham of ACEH on August 3, 2011, CRA submitted a *Work Plan for Feasibility Testing and Additional Assessment*. In the report CRA proposed surfactant to remove LNAPL detected in well MW-7, followed by a gypsum land application and sulfate canister installations in well MW-7 to enhance bioremediation of dissolved hydrocarbons. Additional onsite and offsite wells were also proposed.

2014 and 2015 Lead Investigation Activities

On October 7 and 8, 2014 (All Well Abandonment) and January 20, 2015 (Penecore Drilling) GHD oversaw the advancement of onsite shallow borings HA-1 through HA-7. On September 14 through 17, 2015, GHD oversaw Gregg Drilling advance onsite borings HA-8 through HA-28 and offsite boring SB-13. All onsite borings were advanced to assess lead levels in shallow soil. Detected concentrations of lead ranged from 5.29 milligrams per kilograms (mg/kg) (HA-6 @ 3fbg) to 4,990 mg/kg (HA-19 @ 3 fbg). In order to delineate the downgradient extent of petroleum hydrocarbons in shallow groundwater, offsite boring SB-13 was advanced to 36 fbg; however, no groundwater was observed in the boring after waiting an hour. This is most likely due to the ongoing drought. A soil sample was collected at 35 fbg in lieu of the groundwater sample. The soil was analyzed for total petroleum hydrocarbons as gasoline (TPHg) and benzene, toluene, ethylbenzene and total xylenes (BTEX). No concentrations were detected for TPHg or BTEX at or above the laboratory reporting limits. Additional information is available in GHD's November 5, 2015 *Sampling Results Report.*

Updated Lead Risk Evaluation

Memorandum

To:	Brian Silva	Ref. No.:	312264
From:	Tina LePage/April Gowing/kf/2	Date:	November 12, 2015

Re: Updated Lead Risk Evaluation, Former Standard Oil Station 307233
2259 First Street, Livermore, California

1. Introduction

On behalf of Chevron Environmental Management Company (CEMC), GHD has updated the 2012 lead Risk Evaluation (RE) for the Former Standard Oil Station 307233 located at 2259 First Street, California (Site). Soil sampling has been conducted at the Site since 2003, following the detection of lead in the shallow soils. The purpose of the RE was to incorporate new lead soil data collected in 2014 and 2015 and evaluate whether lead detected in site shallow soil could pose risks/hazards that are above acceptable levels to human health based the current use of the Site.

2. Analytical Data

2.1 Lead Soil Data

The soil analytical data set considered in the RE includes soil data collected during the years 2003, 2006, 2007, 2008, 2010, 2014, and 2015. In addition, the data set evaluated for the purposes of the RE was limited to include only those soil samples taken from depths of less than 10 feet below ground surface (ft bgs), as the receptors are not expected to be exposed to soil from depths greater than 10 ft bgs. The soil analytical data set applied in the RE therefore includes soil data collected from the following locations: SB6, SB7, SB8, SB9, SSB1, SSB2, SSB3, SSB4, SSB5, SSB6, SSB7, SSB8, SSB9, SSB10, SSB11, VP-1, VP-2, VP-3, EX1, EX2, EX3, EX4, EX5, EX6, P1, B1, B2, B3, HA-1, HA-2, HA-3, HA-4, HA-5, HA-6, HA-7, HA-8, HA-9, HA-10, HA-11, HA-12, HA-13, HA-14, HA-15, HA-16, HA-17, HA-18, HA-19, HA-20, HA-21, HA-22, HA-23, HA-24, HS-25, HA-26, HA-27, and HA-28. The maximum detected concentration for lead from this data set was compared to the revised screening level of 80 mg/kg under a residential land use scenario as presented in the document entitled, "*Revised California Human Health Screening Level for Lead*" dated May 18, 2009 (OEHHA, 2009). The residential screening level was exceeded by the lead maximum detected concentration of 3,700 milligrams per kilogram (mg/kg) (B-2; 3 ft bgs, 2003) and as such the RE was conducted. The soil sample from HA-19 at 3 ft bgs had an initial concentration of 4,990 mg/kg, however the sample was reanalyzed two additional times to confirm the result. The reanalyzed results were 1,340 mg/kg and 2,605 mg/kg. These three analytical results were averaged (2978.3 mg/kg) and this average concentration was used in the dataset.

2.2 Lead 95% Upper Confidence Level

For the RE, a 95 percent upper confidence limit (95% UCL) of the mean was calculated for lead. The 95% UCL was determined based on the observed data distribution and the percentage of censored data points (non-detected results) consistent with USEPA's ProUCL Version 5.0.00 software, which was released in September 2013. The methods incorporated in this software are described in USEPA (2013) which has been used as the primary reference document for the UCL methodologies. The 95% UCL of the lead in soil at the Site was determined to be 337 mg/kg as shown in Table 1. The ProUCL output for the 95% UCL is provided in Attachment A.

3. Lead Risk Evaluation

The basis of this RE was to evaluate the potential for risks to human health due to lead in Site soil. It should be noted that the Site is located in an area of commercial land use. The intended future land use for the Site is not expected to change and will continue to be used for parkland use. As such, the identified human receptors evaluated in the risk evaluation (RE) were limited to a parkland user (child) and commercial worker (adult) that may be exposed to direct contact with Site soils.

3.1 Parkland User

The parkland user could be a child that may be impacted by lead in soil. The DTSC (2011) lead risk assessment spreadsheet (Lead Spread8) for lead exposure in children was used to determine exposure levels for residents within the parkland, based on the assumption that the child resident is considered to be more sensitive than the adult resident. Given that there is no playground equipment or designated play areas within the park, it has been assumed that a child park user would only visit the park for half a day per week (0.5 day per week). Based on this exposure the Lead Spread8 spreadsheet (see Table 2) calculated a PRG-90 for a child of 1,079 mg/kg, which is above the 95% UCL of 337 mg/kg. The 95% UCL of 337 mg/kg was used as the exposure point concentration (EPC) for comparison to the calculated PRG-90.

3.2 Commercial Worker

The commercial worker would be an adult that may be impacted by lead in soil. The DTSC (2011) lead risk assessment spreadsheet is a modified version of USEPA's (2009) Adult Lead Model (ALM) which incorporates DTSC recommendations for evaluating commercial worker exposures to lead in soil. Due to the commercial worker mostly working indoors and having limited direct exposure to the lead in soil, it was assumed that the worker may be exposed for 100 days/year (2 day/week for 50 weeks/year) which resulted in the calculated PRG-90 of 795 mg/kg, which is above the soil 95 % UCL of 337 mg/kg for lead. Table 3 presents the calculated PRG-90 for the commercial worker. The 95% UCL of 337 mg/kg was used as the exposure point concentration (EPC) for comparison to the calculated PRG-90.

4. Summary and Conclusions

PRG90 values were calculated using the Lead Spread8 spreadsheet and ALM provided by DTSC. Based on the above exposure assumptions, the calculated PRG90 values (1,079 mg/kg for parkland user and 795 mg/kg for commercial worker) were above the 95% UCL (337 mg/kg) for lead. As a result, the levels of

lead within the soil of the park will not result in a concern for either a child or commercial worker use of the park.

Table 1

Exposure Point Concentration (EPC) Summary for Chemicals of Potential Concern in Soil
Former Standard Oil Station 307233
2259 First Street
Livermore, California

Scenario Timeframe: Current/Future
Medium: Soil
Exposure Medium: Soil

Chemical of Potential Concern	Units	Mean [1]	Data Distribution [2]	Maximum Detected Concentration	Location of Maximum Concentration	EPC Units	Reasonable Maximum Exposure		
							Medium EPC Value	Medium EPC Statistic [3]	Medium EPC Rationale
Metals									
Lead	mg/kg	1.50E+02	(a)	2.98E+03	B-2; 3 ftbgs (09/17/03)	mg/kg	3.37E+02	95% Chebyshev (Mean, Sd) UCL	(4)

Notes:

(1) The Kaplan-Meier estimation method for non-detects was used, as per USEPA (2013).

(2) Data Distribution (Note: data distribution calculated by ProUCL are based on detected values only):

(a) Data set is neither normally, gamma or lognormally distributed.

(b) Data set is lognormally distributed.

(c) Data set is gamma distributed.

(d) Data set is normally distributed.

(3) Statistics (Note: 95% UCL values are calculated using ProUCL software, Version 5.0. See Appendix B for full ProUCL results):

95% Chebyshev (Mean, Sd) UCL = 95% Chebyshev UCL of mean and standard deviation using the Chebyshev Inequality

(4) ProUCL recommended value is used as the EPC value. In the event of more than one recommended EPC value, the higher EPC value is used.

ACEHS Case RO2908

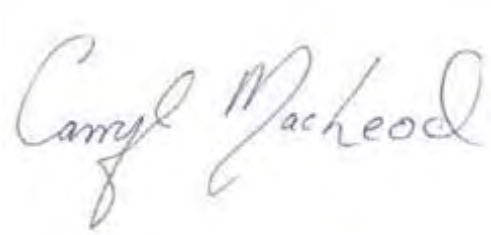
I accept the Soil and Groundwater Management Plan

I agree with the conclusions and recommendations presented in this document. The information included is accurate to the best of my knowledge, and appears to meet local agency and Regional Board guidelines. This work plan was prepared by Conestoga Rovers & Associates, upon whose assistance and advice I have relied.

This letter is submitted pursuant to the requirements of California Water Code Section 13267(b)(1) and the regulating implementation entitled Appendix A pertaining thereto.

I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge.

Sincerely,



Carryl MacLeod
Project Manager

TABLE OF CONTENTS

LIST OF FIGURES
(Following Text)

LIST OF APPENDICES

1.0 INTRODUCTION

Conestoga-Rovers and Associates (CRA) prepared this soil and groundwater management plan (SGMP) at the request of Chevron Environmental Management Company (CEMC) for the Former Texaco Station (Chevron Site 307233) site (the Site) in Livermore, Alameda County, California. This Site may contain lead affected soil or groundwater associated with the Texaco Station in operation from pre-1929 to 1973 (Affected Soil and Groundwater respectively). This SGMP provides information about CEMC's environmental assessment of the Site and outlines the process for working with CEMC to address Affected Soil and/or Affected Groundwater related to excavation or dewatering activities necessary for current, on-site construction activities. A contact sheet is provided as Appendix A.

2.0 SITE CONDITIONS

2.1 SITE DESCRIPTION

The Site is located in City of Livermore in Alameda County, California, at the intersection of First Street and Livermore Avenue (Figures 1 and 2). The Site is located on Assessor's Parcel Number (APN) 097 -0110-005-03 and is owned by the City of Livermore (Figure 2).

2.2 ENVIRONMENTAL INVESTIGATION SUMMARY

Environmental assessment and remediation has been ongoing since 2003 beginning with an investigation initiated by the City of Livermore Engineering Division to assess soil and groundwater conditions prior to further development to the park. To date, 31 soil borings, 6 soil vapor probes and 12 wells have been installed. In 2005, one orphaned underground storage tank (UST) was removed and in 2007, two orphaned USTs and associated product piping were removed. The primary contaminants of concern at the site are lead, total petroleum hydrocarbons as motor oil (TPHmo), total petroleum hydrocarbons as diesel (TPHd), total petroleum hydrocarbons as gasoline (TPHg), and benzene. Alameda County Environmental Health has required that a soil management plan be prepared to address shallow lead contamination in the event of future redevelopment of the park. The locations of site monitoring wells, soil borings, and former USTs are presented on Figure 2.

3.0 ROLES AND RESPONSIBILITIES

This section outlines the process for requesting CEMC's assistance identifying and managing Affected Soil and/or Affected Groundwater.

3.1 NOTIFICATION

CEMC requests that the City of Livermore, or the current property owner(s), provide CEMC with advance notice of plans to conduct construction activities that may encounter Affected Soil and/or Affected Groundwater, if possible. If potentially affected soil and/or groundwater is observed during necessary construction activities, and a CEMC-authorized representative is not on site, CEMC should be notified as early as possible to allow CEMC to profile the material and provide consultation on the eventual disposal or reuse of any Affected Soil and discharge or disposal of any Affected Groundwater. CEMC may be reached at (800) 338-5434.

3.2 PROFILING AND MANAGEMENT

This SGMP was prepared as requested by the Alameda County Environmental Health (ACEH).

After receiving notification that potentially affected soil and/or groundwater has been observed during Site construction activities, CEMC will arrange for a representative to collect samples of the soil and/or groundwater (either in situ or from a segregated[1] stockpile) for profiling purposes.

If, based on a review of the profiling results, ACEH prohibits excavated Affected Soil from being reused on the Site due to the presence of lead or petroleum hydrocarbons, CEMC will coordinate with the City of Livermore regarding the proper off-Site disposal of that excavated soil. The City of Livermore or the current property owner(s) should ensure that any excavated Affected Soil is stockpiled in a separate location from non-affected to allow for proper soil management and disposal.

[1] If Site soils are being excavated, the property owner should ensure that potentially affected soil is stockpiled in a separate location from non-affected soil to allow for proper soil profiling and management.

Low-Threat Closure Request

Appendix G
Low-Threat Closure Evaluation
Former Standard Oil Station 307233
2259 First Street, Livermore, California

PURPOSE OF THE LOW-THREAT UNDERGROUND STORAGE TANK CASE CLOSURE POLICY

On August 17, 2012, the SWRCB adopted the policy via Resolution 2012-0016. The intent of the policy is to increase cleanup process efficiency at petroleum release sites. A benefit of improved efficiency is the preservation of limited resources for mitigation of releases posing the greatest threat to human and environmental health. Per the policy, sites that meet the specified general and media-specific criteria pose a low threat to human health, safety, and the environment and are appropriate for case closure pursuant to Health and Safety Code section 25296.10. The policy further states that those sites that meet the criteria for low-threat closure do not require further corrective action and shall be issued a uniform closure letter. The general and media-specific criteria are described below.

GENERAL CRITERIA

The eight general criteria that must be satisfied by all candidate sites, and the site-specific evaluation for each of these criteria, are presented below.

a) The unauthorized release is located within the service area of a public water system.

Satisfied: Water for the site and surrounding vicinity is provided by the City of Livermore who obtains surface water from the State Water Project in the Sacramento-San Joaquin Delta and groundwater wells in Pleasanton, which are located greater than 1,000 feet from the site.

b) *The unauthorized release consists only of petroleum*.

Satisfied: The unauthorized release at the site has been characterized as a release of petroleum-based products (gasoline and related constituents).

c) The unauthorized ("primary") release from the UST system has been stopped.

Satisfied: The former service station and associated pumps were removed from the site in 1973. In 2005 an orphan UST was encountered and removed beneath the sidewalk on the southwest corner of the site. In 2007 two 750-gallon single-wall steel gasoline USTs and approximately 27 feet of associated piping were removed from the site.

d) *Free product has been removed to the maximum extent practicable*.

Satisfied: Only trace amounts of light non-aqueous phase liquid (LNAPL) are intermittently observed in well MW-7, typically when water levels are at their lowest. LNAPL was last

observed in MW-7 (0.02 ft) in March 2015. LNAPL had previously not been observed in MW-7 since August 2011.

e) *A conceptual site model that assesses the nature, extent, and mobility of the release has been developed.*

Satisfied: The elements of a conceptual site model (CSM) have been previously presented in CRA's *Subsurface Investigation Report* submitted on March 5, 2009, and *Draft Corrective Action Plan* submitted on May 3, 2011, Well Installation Report submitted on May 8, 2012, and *Human Health Risk Assessment for Lead* submitted on June 21, 2012.

f) *Secondary source has been removed to the extent practicable.*

Satisfied: The former service station and associated pumps were removed from the site in 1973. In 2005 an orphan UST was encountered and removed beneath the sidewalk on the southwest corner of the site. In 2007 two 750-gallon single-wall steel gasoline USTs and approximately 27 feet of associated piping were removed from the site.

g) *Soil and groundwater has been tested for MTBE and results reported in accordance with Health and Safety Code section 25296.15.*

Satisfied: Samples collected during subsurface investigations have been analyzed for MTBE, and reported in accordance with Health and Safety Code section 25296.15.

h) *Nuisance as defined by Water Code section 13050 does not exist at the site.*

Satisfied: Conditions defined as a "nuisance" in Water Code section 13050 do not exist at the site.

MEDIA-SPECIFIC CRITERIA

Impacts to human health and the environment can occur due to releases from USTs through contact with contaminated media (groundwater, surface water, soil, and soil vapor) via various exposure pathways. In the policy, the most common exposure scenarios have been combined into three media-specific criteria:

1. Groundwater
2. Vapor Intrusion to Indoor Air
3. Direct Contact and Outdoor Air Exposure

Groundwater

It is a fundamental tenet of the policy that if the closure criteria described in the policy are satisfied at an unauthorized petroleum release site, attaining background water quality is not feasible, and applicable water quality objectives (WQOs) will be attained through natural attenuation within a reasonable amount of time, prior to the expected need for use of any affected groundwater. If a site has groundwater with a designated beneficial use that is

affected by an unauthorized release, to satisfy the media-specific criteria for groundwater, the contaminant plume that exceeds WQOs must be stable or decreasing in aerial extent, and meet all of the additional characteristics of one of the five classes of sites listed in the policy:

Satisfied: The site satisfies the characteristics of Class 2.

a. The contaminant plume that exceeds WQOs is less than 250 feet in length. The plume appears to be confined to the site boundaries. Impacted groundwater is defined by downgradient offsite shallow zoned well MW-9, and deep zoned well MW-1. Additionally, offsite soil boring SB-13 (downgradient of the shallow zone wells) was advanced to further delineate petroleum hydrocarbons in the shallow water-bearing zone. Similar to the onsite shallow wells, a zone of alternating fines and gravel was encountered from 22 fbg to 30 fbg. The layers of fines were no thicker than 2 inches and some, but not all, of the fine layers were wet. A temporary well was set and left in the open borehole to allow groundwater to accumulate; however, no groundwater was noted in the borehole after waiting for approximately one hour. It should be noted that several of the onsite shallow wells have recently gone dry, likely due to the ongoing drought, indicating that first encountered groundwater is limited. In-lieu of a groundwater sample, a soil sample was collected from the bottom of the borehole and analyzed for petroleum hydrocarbons. Results were below detection limits for all analytes.

b. There is no free product. Only trace amounts of light non-aqueous phase liquid (LNAPL) are intermittently observed in well MW-7, typically when water levels are at their lowest. LNAPL was last observed in MW-7 (0.02 ft) in March 2015. LNAPL had previously not been observed in MW-7 since August 2011.

c. The nearest existing water supply well or surface water body is greater than 1,000 feet from the defined plume boundary. The closest identified wells are located approximately 2,075 feet from the site (Appendix F1).

d. The dissolved concentration of benzene is less than 3,000 micrograms per liter (μg/L) and the dissolved concentration of MTBE is less than 1,000 μg/L. Benzene was last detected at a maximum concentration of 18 μg/L on September 24, 2015. Dissolved phase MTBE has not been reported.

Petroleum Vapor Intrusion to Indoor Air

The low-threat vapor intrusion criteria described below apply to sites where the release originated and impacted or potentially impacted adjacent parcels or (2) buildings for human occupancy are reasonably expected to be constructed when: (1) existing buildings are occupied or may be reasonably expected to be occupied in the future, on the future.

Petroleum release sites will satisfy the media-specific screening criteria for petroleum vapor intrusion if:

a. Site-specific conditions at the release site satisfy all of the characteristics and criteria of scenarios 1 through 3 as applicable, or all of the characteristics and criteria of scenario 4 as applicable; or,

b. A site-specific risk assessment for vapor intrusion is conducted and demonstrates that human health is protected to the satisfaction of the regulatory agency; or,

c. The regulatory agency determines there is no significant risk of adversely affecting human health through the use of institutional or engineering controls.

Petroleum release sites shall satisfy the media-specific criteria for petroleum vapor intrusion to indoor air and be considered low-threat for the vapor intrusion to indoor air pathway if any of the above criteria are met.

Satisfied: A site-specific risk assessment for vapor intrusion was conducted and demonstrated that human health is not at risk (CRA, *Subsurface Investigation Report*, March 5, 2009). Additionally, the site satisfies the characteristics of Scenario 4B of criteria (a).

- Please see the table below comparing LTC criteria for direct soil gas with a bioattenuation zone.

Soil Gas Criteria ($\mu g/m^3$)			
	With Bioattenuation Zone*		
Constituent	***Residential***	***Commercial***	***Highest Detected Concentration***
Benzene	<85,000	<280,000	<3.2
Ethylbenzene	<1,100,000	<3,600,000	9.7
Naphthalene	<93,000	<310,000	<21
$\mu g/m^3$ = Micrograms per cubic meter			

*Bioattentuation zone = total TPH <100 mg/kg in upper 5' of soil, and ≥4 percent oxygen in soil at 5 ft sample depth; a 1,000-fold bioattenuation of petroleum vapors is assumed for the zone.

Direct Contact and Outdoor Air Exposure

The policy describes conditions where direct contact with contaminated soil or inhalation of contaminants volatized to outdoor air poses an insignificant threat to human health. Release sites where human exposure may occur satisfy media-specific criteria for direct contact and outdoor air exposure and shall be considered low-threat if they meet any one of the following:

a. Maximum concentrations of petroleum constituents in soil are less than or equal to those listed in the table below for the specified depth below ground surface. The limits from 0 to 5 feet below grade (fbg) protect from ingestion, dermal contact, and outdoor inhalation of volatile and particulate emissions. The 5 to 10 fbg limits protect from inhalation of volatile emissions only; the ingestion and dermal contact pathways are not considered significant.

In addition, if exposure to construction workers or utility trench workers is reasonably anticipated, the concentration limits for Utility Worker shall also be satisfied.

	Policy Criteria					***Site Data***	
	Residential		***Commercial/Industrial***		***Utility Worker***	***Maximum Site Concentration***	
Constituent	***0–5 fbg (mg/kg)***	***Volatilization to outdoor air 5–10 fbg (mg/kg)***	***0–5 fbg (mg/kg)***	***Volatilization to outdoor air 5–10 fbg (mg/kg)***	***0–10 fbg (mg/kg)***	***0–5 fbg (mg/kg)***	***5–10 fbg (mg/kg)***
Benzene	1.9	2.8	8.2	12	14	<0.0005	<0.0005
Ethylbenzene	21	32	89	134	314	<0.001	<0.001
Naphthalene	9.7	9.7	45	45	219	ND	ND
PAH*	0.063	NA	0.68	NA	4.5	NA	NA

* Based on the seven carcinogenic polycyclic aromatic hydrocarbons (PAHs) as benzo(a)pyrene toxicity equivalent [BaPe]. The PAH screening level is only applicable where soil is affected by either waste oil and/or Bunker C fuel.
NA = not applicable
ND = not detected

b. Maximum concentrations of petroleum constituents in soil are less than levels that a site-specific risk assessment demonstrates will have no significant risk of adversely affecting human health.

c. As a result of controlling exposure through the use of mitigation measures or through the use of institutional or engineering controls, the regulatory agency determines that the concentrations of petroleum constituents in soil will have no significant risk of adversely affecting human health.

Satisfied: The site meets criteria (a) above for residential and commercial policy criteria. The site is currently zoned as commercial/industrial (city park) and will remain this way for the foreseeable future.

Site Name: Former Standard Oil Station 307233
Site Address: 2259 First Street, Livermore, CA

Site meets the criteria of the Low-Threat Underground Storage Tank (UST) Case Closure Policy as described below.[1]

General Criteria General criteria that must be satisfied by all candidate sites: **Is the unauthorized release located within the service area of a public water system?** **Does the unauthorized release consist only of petroleum?** **Has the unauthorized ("primary") release from the UST system been stopped?** **Has free product been removed to the maximum extent practicable?** **Has a conceptual site model that assesses the nature, extent, and mobility of the release been developed?** **Has secondary source been removed to the extent practicable?** **Has soil or groundwater been tested for MTBE and results reported in accordance with Health and Safety Code Section 25296.15?** **Does nuisance as defined by Water Code section 13050 exist at the site?** **Are there unique site attributes or site-specific conditions that demonstrably increase the risk associated with residual petroleum constituents?**	☒Yes ☐ No ☒ Yes ☐ No ☒ Yes ☐ No ☒ Yes ☐ No ☐ NA ☒ Yes ☐ No ☒ Yes ☐ No ☒ Yes ☐ No ☒ Yes ☐ No ☐ Yes ☒ No
Media-Specific Criteria Candidate sites must satisfy all three of these media-specific criteria: **1. Groundwater:** To satisfy the media-specific criteria for groundwater, the contaminant plume that exceeds water quality objectives must be stable or decreasing in areal extent, and meet all of the additional characteristics of one of the five classes of sites: **Is the contaminant plume that exceeds water quality objectives stable or decreasing in areal extent?** **Does the contaminant plume that exceeds water quality objectives meet all of the additional characteristics of one of the five classes of sites?** If YES, check applicable class: ☐ **1** ☒ **2** ☐ **3** ☐ **4** ☐ **5**	☒ Yes ☐ No ☐ NA ☒ Yes ☐ No ☐ NA

[1] Refer to the Low-Threat Underground Storage Tank Case Closure Policy for closure criteria for low-threat petroleum UST sites.

For sites with releases that have not affected groundwater, do mobile constituents (leachate, vapors, or light non-aqueous phase liquids) contain sufficient mobile constituents to cause groundwater to exceed the groundwater criteria?	☐ Yes ☐ No ☒ NA
2. Petroleum Vapor Intrusion to Indoor Air: The site is considered low-threat for vapor intrusion to indoor air if site-specific conditions satisfy all of the characteristics of one of the three classes of sites (a through c) or if the exception for active commercial fueling facilities applies. **Is the site an active commercial petroleum fueling facility?** Exception: Satisfaction of the media-specific criteria for petroleum vapor intrusion to indoor air is not required at active commercial petroleum fueling facilities, except in cases where release characteristics can be reasonably believed to pose an unacceptable health risk. **a. Do site-specific conditions at the release site satisfy all of the applicable characteristics and criteria of scenarios 1 through 3 or all of the applicable characteristics and criteria of scenario 4?** If YES, check applicable scenarios: ☐ **1** ☐ **2** ☒ **3** ☐ **4** **b. Has a site-specific risk assessment for the vapor intrusion pathway been conducted and demonstrates that human health is protected to the satisfaction of the regulatory agency?** **c. As a result of controlling exposure through the use of mitigation measures or through the use of institutional or engineering controls, has the regulatory agency determined that petroleum vapors migrating from soil or groundwater will have no significant risk of adversely affecting human health?**	☐ Yes ☒ No ☒Yes ☐ No ☐ NA ☒ Yes ☐ No ☐ NA ☐ Yes ☐ No ☒ NA
3. Direct Contact and Outdoor Air Exposure: The site is considered low-threat for direct contact and outdoor air exposure if site-specific conditions satisfy one of the three classes of sites (a through c). **a. Are maximum concentrations of petroleum constituents in soil less than or equal to those listed in Table 1 for the specified depth below ground surface (bgs)?** **b. Are maximum concentrations of petroleum constituents in soil less than levels that a site specific risk assessment demonstrates will have no significant risk of adversely affecting human health?** **c. As a result of controlling exposure through the use of mitigation measures or through the use of institutional or engineering controls, has the regulatory agency determined that the concentrations of petroleum constituents in soil will have no significant risk of adversely affecting human health?**	☒ Yes ☐ No ☐ NA ☒ Yes ☐ No ☐ NA ☐ Yes ☐ No ☒ NA
