TOXAPHENE SOIL REMOVAL

Reference: Updated Soil Removal Workplan, Jordan Ranch Parcel H, July 28, 2014

Dear Mr. Nandwana:

This report documents the soil remediation activities that were implemented on behalf of BJP-ROF Jordan Ranch, LLC at the Jordan Ranch Parcel H (Site) in Dublin, California (Figure 1). The soil removal was implemented to address toxaphene impacts that were identified within a limited area of the proposed residential development project.

BACKGROUND

The approximately 4.6-acre Property is located at the intersection of Fallon Road and Central Parkway.

In August 2013, soil samples were collected to address potential polychlorinated biphenyl (PCB) impacts at the base of a former power pole and petroleum staining previously observed near a former barn and above-ground storage areas. The footprints of the former structures were obtained from Google Earth and are overlayed on Figure 2. The only detection that exceeded Table K-1 ESLs was a detection of toxaphene at location Barn SS-7 at a depth of 0 to 6 inches. The detected toxaphene concentration, 3.6 mg/kg, is less than the state hazardous waste threshold, but exceeds residential screening criteria. Diesel and motor oil detections were also colocated at Barn SS-7, at 63 and 230 mg/kg. Cumulative soil analytical data is tabulated in Table 1.

In July 2014, we collected four additional step-out samples around prior location SS-7. Samples *N, S, E, W*, were collected 15 feet from prior location SS-7. The samples were collected at a depth of 0 to 0.5 foot below ground surface. Diesel was detected at a maximum concentration of 41 mg/kg in sample *S*. Motor oil was detected at a maximum concentration of 250 mg/kg in sample *S*. DDE and DDD were detected up to a maximum concentration of 0.012 mg/kg in sample *N*. Toxaphene was not detected above laboratory reporting limits.

REMOVAL ACTION OBJECTIVES

The removal action objective (RAO) was to reduce the human health risks associated with the chemicals of potential concern (COPC) at the Property to a level that is acceptable for the planned residential development. Based on the RAO, cleanup levels were established that are protective of human health and the environment and reduce the potential for exposure to the COPC in soil encountered at the Property. The established RAOs are as follows:

TABLE 1
Remedial Action Objectives

COPC	Basis for RAO	RAO
TPH Diesel	Residential ESL (RWQCB, Table K-1)	240 mg/kg
TPH Motor Oil	Residential ESL (RWQCB, Table K-1)	10,000 mg/kg
Toxaphene	Residential CHHSL (DTSC)	0.46 mg/kg
DDE	Residential CHHSL (DTSC)	1.6 mg/kg
DDD	Residential CHHSL (DTSC)	2.3 mg/kg

DEBRIS REMOVAL ACTION

We observed the soil excavation on August 29, 2014. We retained a hazmat licensed excavation subcontractor to perform the soil excavation and landfill disposal. A mini excavator was utilized to remove a 20 by 20 foot area, centered on location SS-7, to a depth of 12 inches below existing grade. The excavated soil was placed on plastic and temporarily staged onsite for landfill profiling.

We collected four samples from the base of the excavation and submitted them as discrete samples for lab analysis of diesel and motor oil by EPA Test Method 8015B, silica gel cleanup by EPA Test Method 3630, and organochlorine pesticides by EPA Test Method 8081. A four point composite sample was collected from the stockpile for landfill profiling.

CONCLUSION

The four discrete confirmation soil samples that were collected from the excavation base exhibited no detections above laboratory reporting limits. The reporting limits are less than the RAOs. The stockpile composite sample exhibited detections of motor oil at 120 mg/kg and toxaphene at 14 mg/kg. The removal action involved excavation of approximately 29 tons of Class I soil and disposal of this material at the Clean Harbors Buttonwillow Facility. Landfill scale receipts are attached. We conclude that the RAOs for surface soil at the Site have been achieved.

We are pleased to be of service to you on this project. If you have any questions concerning this report, please contact us.

Sincerely,

ENGEO Incorporated

Morgan Johnson
Environmental Scientist

Shawn Munger, CHG
Principal

RE: Jordan Ranch

Work Order No.: 1408181

Dear Shawn Munger:

Torrent Laboratory, Inc. received 8 sample(s) on August 29, 2014 for the analyses presented in the following Report.

As per Chain of Custody instruction, four discrete samples were analyzed for OCPs and TPH diesel/motor oil. Four additional samples were composited 4:1 for OCP, CAM17, TPH gas/diesel/motor oil and VOC analysis.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

Patti Sandrock
QA Officer

September 04, 2014
Date

Date: 9/4/2014

Client: Engeo (San Ramon)

Project: Jordan Ranch

Work Order: 1408181

CASE NARRATIVE

No issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Unless otherwise indicated in the following narrative, no results have been method and/or field blank corrected.

Reported results relate only to the items/samples tested by the laboratory.

Torrent LABORATORY, INC.

Sample Result Summary

Report prepared for: Shawn Munger
Engeo (San Ramon)

Date Received: 08/29/14
Date Reported: 09/04/14

B1 1408181-001

Parameters:	Analysis Method	DF	MDL	PQL	Results	Unit

All compounds were non-detectable for this sample.

B2 1408181-002

Parameters:	Analysis Method	DF	MDL	PQL	Results	Unit

All compounds were non-detectable for this sample.

B3 1408181-003

Parameters:	Analysis Method	DF	MDL	PQL	Results	Unit

All compounds were non-detectable for this sample.

B4 1408181-004

Parameters:	Analysis Method	DF	MDL	PQL	Results	Unit

All compounds were non-detectable for this sample.

Torrent LABORATORY, INC.

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.
Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.
Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)
Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.
Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)
Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.
Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero
Practical Quantitation Limit (PQL) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.
Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates
Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis
Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.
Units: the unit of measure used to express the reported result - **mg/L** and ***mg/Kg*** (equivalent to PPM - parts per million in **liquid** and ***solid***), **ug/L** and ***ug/Kg*** (equivalent to PPB - parts per billion in **liquid** and ***solid***), **ug/m3**, ***mg.m3***, **ppbv** and ***ppmv*** (all units of measure for reporting concentrations in air), **%** (equivalent to 10000 ppm or 1,000,000 ppb), **ug/Wipe** (concentration found on the surface of a single Wipe usually taken over a 100cm2 surface)

LABORATORY QUALIFIERS:

B - Indicates when the anlayte is found in the associated method or preparation blank
D - Surrogate is not recoverable due to the necessary dilution of the sample
E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.
H- Indicates that the recommended holding time for the analyte or compound has been exceeded
J- Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative
NA - Not Analyzed
N/A - Not Applicable
NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added
R- The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts
S- Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative
X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.

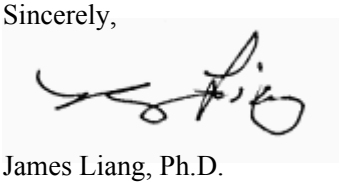
Enclosed are the results of analyses for samples received by the laboratory on 09/10/14 17:30. Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved methodologies. I certify that the results are in compliance both technically and for completeness.

Analytical results are attached to this letter. Please call if we can provide additional assistance.

Sincerely,



James Liang, Ph.D.
Laboratory Director

Notes and Definitions

QR-1	The RPD value for the sample duplicate or MS/MSD was outside of the QC acceptance limits due to matrix interference. QC batch accepted based on LCS and/or LCSD recovery.
QM-7T	The spike recovery was outside acceptance limits for these analytes in both the MS and MSD due to toxaphene/chlordane interference from the source. The batch was accepted based on acceptable LCS/LCSD recovery.
QM-5	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data is acceptable.
QB-1	The method blank or calibration verfication blank contains analyte at a concentration above the MRL; however, concentration is less than 10% of the sample result, which is negligible according to method criteria.
EXT-3	The sample extract has undergone silica-gel clean-up, EPA Method 3630, which is specific to polar compound contamination.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
