Soil sample processing: Soil samples were analyzed by:

McCampbell Analytical
110 2nd Ave. South
Pacheco, Ca. 94553
State Certification #: 1644

(note: sample processing and associated method preparation numbers are noted on the lab results which are attached.)

Location of the tank: The tanks were located at City of Pleasanton, 4444 Railroad Avenue, Pleasanton, CA. A map is attached which shows the location of the tanks and associated underground piping as well as, streets, north direction, and buildings on site.

Sampling: Soil sampling was performed by Russ Gentry, as requested by the representative of City of Pleasanton. Two (2) samples of the soil from the pit bottom of the tanks was taken, one (1) from the diesel pit and one (1) from the gasoline. The pit bottom samples was taken from approximately 7.5' below grade. Also, one (1) samples of the stockpiled soil was also taken.

Sampling methodology: The soil samples were obtained by driving clean brass tubes (2 x 6) into native soil which was excavated from the tank pit and the soil in the stockpile. The tubes were driven by using a wooden mallet. The tubes were then sealed with aluminum foil, plastic end caps, and the tubes were placed in a zip lock plastic bag. The samples were labeled, placed on ice, and were transported to a state certified lab for processing. A chain of custody form was maintained for the samples, a copy of which is attached.
