**Subject: Expedited Site Assessment Work Plan  
Shore Acres Gas, 403 E 12<sup>th</sup> Street, Oakland, California**

Dear Mr. Chan:

Insight, Inc. is pleased to submit one copy of the work plan for your review. This work plan was prepared to characterize the nature and extent of petroleum hydrocarbons in soil and groundwater at the Shore Acres Gas facility.

If you have any questions or comments regarding this report, please do not hesitate to call either of us at (916) 923-3335.

Sincerely,  
**Insight, Inc.**

## 1.0 INTRODUCTION

Insight Environmental, Engineering & Construction, Inc. (Insight) has prepared this work plan to characterize the nature and extent of petroleum hydrocarbons in soil and groundwater at the Shore Acres Gas facility, at 403 East 12<sup>th</sup> Street in Oakland, California (Figure 1). The site physical address on the building is 403 East 12<sup>th</sup> Street. After a review of the Individual Grant Deed at the Alameda County Records department and the parcel number map from the Alameda County Assessor's office, it was discovered that the property is listed with the county as 409 East 12<sup>th</sup> Street (Attachment A). To avoid confusion Insight will continue to refer to the site address as 403 East 12<sup>th</sup> Street (site).

This work plan was prepared on behalf of Mr. Rashid Suhail Ghafoor (owner), for submittal to the City of Oakland Fire Department and Alameda County Environmental Health Department. This work plan has been prepared in response to a letter from (and for submittal to) the Alameda County Health Care Services, Environmental Health Department (ACEH, 21 March 2007). The ACEH letter is presented as Attachment B.

The purpose of this work plan is to address the requirement to gather additional information to investigate the release of petroleum hydrocarbons to soil and groundwater at this site. In addition, this work plan is to address the technical comments outlined in the above letter and to submit a technical report incorporating the research, maps, aerial photos, and background information.

Procedures and protocol defined herein conform to guidance provided in the U.S. Environmental Protection Agency (EPA) document Expedited Site Assessment Tools for Underground Storage Tank Site (EPA 1997).

The expedited site assessment (ESA) process was selected to rapidly characterize the site and allow corrective action decisions to be made quickly. Barring off-site migration of hydrocarbon contaminants, the scope of work defined herein has been designed to provide sufficient data to characterize the horizontal and vertical extent, as well as the magnitude of contamination at the site with a single field effort. To that end, specifications provided in this work plan with regard to location and depth of soil borings and groundwater sampling locations should be viewed as flexible, preliminary, and tentative estimates. Senior scientists acting as

field managers will have the authority to refine these specifications based on incoming, real-time data.

## **2.0 BACKGROUND**

### **2.1 SITE DESCRIPTION**

The site is an operating gasoline and diesel facility located at 403 East 12<sup>th</sup> Street in the city of Oakland, California (Figure 1). The petroleum system consists of two dispenser islands, piping, and three 12,000-gallon USTs used to store gasoline and diesel fuel. Current site configuration is illustrated on Figure 2.

The site is bound to the northwest by 4<sup>th</sup> Avenue, to the northeast by East 12<sup>th</sup> Street, and by commercial/industrial buildings to the southeast and southwest. Properties in the immediate vicinity appear are developed for office, warehouse, apartments, and retail use. A swimming pool is located across 4<sup>th</sup> Avenue from the subject site.

Topography in the vicinity of the site is generally flat. Asphalt and concrete pavement cover the entire ground surface. Surface water flow at the site appears to be toward storm drains located near 4<sup>th</sup> Avenue and East 12<sup>th</sup> Street.

### **2.2 SITE HISTORY**

In June 2006, a file review was completed at the City of Oakland Fire Department for the Shore Acres Gas Station (Geofon 2006). Documents indicated that three 12,000-gallon USTs were installed at the site in 1982. On 6 May 1999, Ulrich Industrial Coatings was contracted to line the inside of the three tanks with a fiberglass liner and corrosion protection. On 27 August 2003, new dispensers were installed at the site. On 13 September 2005, the site was received as a gift by the current owner (Attachment A).

In response to a report of an unauthorized release of petroleum hydrocarbons, a Phase II site assessment was conducted in July 2006. This work consisted of drilling two soil borings in the vicinity of the USTs and collecting soil samples for laboratory analysis. Results of these analyses indicated that detectable concentrations of total petroleum hydrocarbons as diesel (TPH-d), TPH as gasoline (TPH-g), benzene, toluene, ethylbenzene and xylenes (BTEX), methyl tertiary butyl ether (MTBE), and tertiary butyl alcohol (TBA) were present in soil at the site. No detectable concentrations of the gasoline oxygenate additives di-isopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), or tertiary-amyl methyl ether (TAME) were noted in any samples.

## **2.3 GEOLOGY AND HYDROLOGY**

Soil at the site consists of Quaternary, fine-grained eolian dune sands and alluvium (USGS 1990). Soil encountered at the site during previous drilling activities consisted mostly of clays and clayey silts with lenses of silty sands and silts (Geofon 2006). Soil borings in the vicinity of the USTs contained clays and silts to approximately 18 below ground surface (bgs). The nearest body of surface water is the Lake Merritt canal, located approximately 1,100 feet west of the site.

The direction of groundwater flow varies locally near the site. Review of topographical maps and GeoTracker<sup>®</sup> data indicates that flow direction is likely toward the east.

## **2.4 CONDUIT STUDY**

### **2.4.1 Department of Water Resources**

Research was conducted at the Department of Water Resources (DWR) in Sacramento, California on 25 April 2007. A detailed well survey of all wells (monitoring and production wells: active, inactive, standby, destroyed, abandoned and dewatering, drainage, and cathodic within a ¼-mile radius of the subject site. No wells mentioned above were located or identified in the DWR records within ¼-mile radius of the site.

### **2.4.2 GeoTracker<sup>®</sup>**

Research was conducted on the GeoTracker<sup>®</sup> web page regarding leaking underground fuel tanks (LUFT) within a ¼-mile of the site. Seven sites were found and their LUFT reports and GeoTracker<sup>®</sup> map are provided as Attachment C. None of the sites were reported to currently have “field points.”

### **2.4.3 GeoSearch<sup>®</sup>**

GeoSearch<sup>®</sup> was contracted to perform a 1-mile radius report centered on the subject site which included: GeoPlus<sup>®</sup> Report (federal and state data base summary), historical aerial photographs, Sanborn maps, city directory, and historical topographical maps (Attachment D). GeoSearch<sup>®</sup> Street Maps 1 and 2 identified 6 leaking underground storage tank (LUST) sites and 1 LUST/United States Resource Conservation & Recovery Act-Generator (USRCRAG) located within ¼-mile of the site.

Sites identified as LUFT/USRCRAG are numbered 2, 10, 11, 12, 23, 28, and 30. Current status of sites identified as numbers 2, 11, 23, and 30 were reported as “case closed.” Current status of site identified as number 10 was reported as “leak being confirmed.” Site number 10 was reported to be identified as Shell and located at 510 14<sup>th</sup> Street East, Oakland, California located approximately 0.12 miles from the site. Site identified as number 12 was reported as Merritt Environmental Corporation located at 1044 5<sup>th</sup> Avenue, Oakland, California approximately 0.12 miles from the subject site. Current status of number 12 was reported as “preliminary site assessment underway.” Site identified as number 28 was reported as Harley Davidson Motorcycle located at 744 12<sup>th</sup> Street East, Oakland, California located approximately 0.23 miles from the subject site. Current status of number 28 was reported as “leak confirmation.”

None of these sites were reported to have groundwater monitoring wells (active or abandoned) or had records on file with DWR.

#### **2.4.4 Public and Municipal Utilities**

Utility maps were reviewed from the various public and municipal utility agencies within the vicinity of the site (Attachment E). As an example of the numerous utilities utilizing the 4<sup>th</sup> Avenue and East 12<sup>th</sup> Street corridors, PG&E maps and corresponding letter illustrates the “extreme caution” to be exercised when working within the limits of the roadways. When PG&E personnel were contacted by telephone it was expressed that PG&E could not confirm the exact location or depths of their utilities. Utilities depths are not known by PG&E personnel because utilities may have been emplaced 40 years ago and the surface grade may have changed significantly during that time.

Insight personnel were unable to get verifiable depths from the public and municipal utility personnel within the vicinity of the site. It is reasonable to assume that utility trenches along the 4<sup>th</sup> Avenue and East 12<sup>th</sup> Street corridors provide preferential pathways for contaminant migration.

### **3.0 SCOPE OF WORK**

Protocol specified by applicable Occupational Safety and Health Administration, EPA, and State of California guidance documents will be used to complete all environmental site investigation activities. All environmental samples will be collected using Insight standard operating procedures, and will be submitted to a State of California-certified analytical lab for analyses using proper chain-of-custody procedures. All work will be conducted under the supervision of California-registered civil engineer or registered geologist.

In accordance with the ESA process, the following specifications, particularly those involving the number, location, and depth of soil borings and groundwater sampling locations, are subject to revision by senior members of the field teams. Real-time data will be used to refine the site conceptual model (Figure 3), and adjust the location and/or depth of sampling points accordingly.

#### **3.1 TASK 1: PRE-FIELD ACTIVITIES**

Upon approval of this work plan by the regulatory agencies, the following activities will be initiated:

- Submit a drilling permit package,
- Retain and schedule a licensed C-57 drilling contractor,
- Retain and schedule a California-certified mobile laboratory,
- Mark proposed borehole locations,
- Contact Underground Service Alert to locate underground utilities in the vicinity of the work site,
- Prepare a site specific health and safety plan, and
- Contact ACEH regarding scheduled field activities.

#### **3.2 TASK 2: SOIL SAMPLING**

Nine shallow soil borings will be drilled at the site using either single-rod or dual-tube (i.e., cased) direct-push technology (DPT). A single rod system can be used if the soil is sufficiently cohesive to maintain an open hole when samples are retrieved. If the boreholes have a tendency to collapse when samples are retrieved, then these shallow boreholes will be

advanced with a cased system. Soil samples will be collected using split barrel samples, Shelby tubes, acrylic sleeves, or piston (sealed soil) samplers, at the discretion of the field manager. Additional information regarding DPT methods is presented in the Sampling, Analysis, and Quality Assurance Plan (Appendix A).

Seven of these borings will be drilled along the perimeter of the property, and one each in front of the building and between the dispenser islands (Figure 4). These borings will be advanced to about 5 ft below the top of first encountered water, which is anticipated to occur at a depth of between 20 and 30 ft bgs. The previous investigation did not encounter groundwater at 20 feet bgs (Geofon 2006). Soil samples will be collected at 5-foot intervals in each borehole above encountered water. Soil samples will be submitted for analysis based on the highest field detections indicated by a photoionization detector (PID).

A mobile California-certified laboratory will be onsite and will be capable of performing analysis of 12 soil/groundwater samples per day. Each laboratory submitted sample will be analyzed for TPH-g, TPH-d, BTEX, MTBE, DIPE, ETBE, TAME, and TBA.

Two soil samples from each borehole will be submitted for laboratory analyses, based on the following criteria:

- 1) The sample from the 5-foot interval with the highest concentration of contaminants of concern, and
- 2) The sample from the deepest 5-foot interval (but above the water table) with no detectable concentrations of contaminants of concern.

### **3.3 TASK 3: TEMPORARY AND PERMANENT WELL INSTALLATION AND GROUNDWATER SAMPLING**

#### **3.3.1 Temporary Well Installation**

Each of the nine shallow soil borings described in the previous section will be converted into a temporary groundwater monitoring well in order to establish a local groundwater gradient. Conversion will be accomplished by inserting a ¾-inch polyvinyl chloride (PVC) casing with 5 feet of factory-slotted 0.02-inch screen. The annulus will be backfilled with Lonestar® #3 filter pack sand from total depth to one foot above the top of the screen. Two feet of bentonite will be placed above the filter pack and neat cement will backfill the remaining annulus to ground surface. The temporary well will be completed at the surface with a 5-inch diameter traffic-rated well box set in concrete. It is anticipated that three borings will be completed each day and converted into temporary wells. The first set of wells will be developed on the second day until field parameters; pH, temperature, specific conductivity, dissolved oxygen, and turbidity are stabilized. Due to the diameter of the borehole and the annulus space it may not be feasible to be able to get each well to stabilize as would a 2-inch well, therefore a reasonable effort will be made to establish stability. This boring, sampling, well construction, and development process will continue until all nine temporary wells have been installed.

#### **3.3.2 Temporary Well Sampling**

Once all nine temporary groundwater monitoring wells have developed they will be allowed to stand for a minimum of 24 hours. Prior to sampling, water levels will be recorded in each well to the nearest 0.01 ft, referenced to the top of the PVC casing. Each well will then be purged to ensure representative groundwater samples are collected. Purging will be completed by bailing or pumping, during which measurements will be made of pH, temperature, dissolved oxygen, specific conductivity, and turbidity. Purging will continue, to the extent practical, until these parameters stabilize. After well purging is complete, groundwater samples will be collected using either a disposable micro-bailer or pneumatic pump, transferred to laboratory-supplied glass vials, and placed in an ice-chilled cooler.

### **3.3.3 Permanent Well Installation**

Once an onsite groundwater gradient has been established, four permanent groundwater monitoring wells will be installed. Three of these wells will be positioned to monitor the groundwater gradient. The fourth well will be considered a deep well and will be screened 5 feet below the established water table. Based on the laboratory results from the temporary wells, the deep well will be installed in the area of suspected highest concentration in an effort to define the vertical extent of the contamination. A total of four soil borings will be drilled at the site, using a truck-mounted drill rig with 8-inch diameter hollow-stem augers. The initial 5 feet of each boring will be advanced with a hand auger to reduce the possibility of damaging underground utilities. Soil samples will be collected at 5-foot intervals using a California modified split-spoon sampler.

Soil from each sampled interval will be screened in the field with a portable PID meter. Insight will record PID readings, soil types, and other pertinent geologic data on a borehole log. A minimum of two soil samples will be submitted for chemical analysis from each of the on-site soil borings, the sample from the interval with the highest PID response, the sample from just above first-encountered groundwater. The supervising geologist or engineer may select additional samples for chemical analysis based on conditions observed in the field at the time of drilling. Locations of the proposed soil borings and groundwater monitoring wells are contingent upon the groundwater gradient recorded from the temporary groundwater wells.

### **3.3.4 Investigation Derived Waste**

Wastewater generated during the field activities will be contained in appropriately labeled U.S. Department of Transportation-approved 55-gallon steel drums and stored on site. A licensed contractor will dispose of stockpiled soil and drummed wastewater at a properly licensed facility.

## **3.4 TASK 4: BOREHOLE ABANDONMENT**

Upon completion of sampling activities and the establishment of the on-site groundwater gradient the temporary wells will be abandoned by over-drilling using a truck-mounted drill rig with 6-inch outer-diameter hollow-stem augers. Boreholes will be abandoned by backfilling each with a mixture of 98% Portland cement and 2% bentonite powder to within approximately

one-foot from the surface. To prevent gaps in the filling process, the augers be used to tremie fill each borehole from the bottom up. The remaining hole will be finished to match the existing surface.

### **3.5 TASK 5: LABORATORY ANALYSIS**

#### **3.5.1 Soil Samples**

Selected soil samples will be analyzed for TPH-d using EPA Method 8015B, and TPH-g, BTEX, MTBE, ETBE, TAME, and TBA will be analyzed using EPA Method 8260B. Maximum laboratory reporting limits for these compounds are presented in Table 1.

#### **3.5.2 Groundwater Samples**

All groundwater samples will be analyzed for TPH-d using EPA Method 8015B, and TPH-g, BTEX, MTBE, ETBE, TAME, and TBA will be analyzed using EPA Method 8260B. Maximum laboratory reporting limits for these compounds are presented in Table 1.

### **3.6 TASK 6: SURVEYING**

A California-licensed surveyor will survey the location and elevation of all newly installed temporary and permanent wells. Horizontal control will be to the nearest 0.1 ft, and vertical control will be to the nearest 0.01 ft. All measurements will be referenced to the nearest USGS benchmark and the North American Vertical Datum of 1988.

### **3.7 TASK 7: REPORT PREPARATION**

Following completion of drilling, sampling, and receipt of associated laboratory reports, Insight will complete a data quality review and validation. Validated data will be compiled in a summary table to be included in the report. Approximately 30 days after completion of field activities, Insight will submit a draft report documenting findings associated with the drilling, well installations, and laboratory analysis. This report will include:

- Description of lithologic conditions encountered during drilling, including boring logs for all drilling and well installation activities;
- Tabular summary of all analytical data (soil and groundwater);
- Isoconcentration maps of hydrocarbon concentrations in soil and groundwater; and

- Recommendations for additional investigation, performance of a human health risk assessment, and/or remedial actions, as appropriate.

Laboratories will be requested to provide data packages that include a data summary report, which includes (1) the data for each sample, (2) the quality assurance/quality control data (results for matrix spikes, blank spikes, duplicates, instrument blanks, etc), and (3) a general statement that summarizes the data quality.

## **4.0 PROPOSED SCHEDULE**

Upon approval of this work plan, Insight will: 1) submit a drilling, well installation, and abandonment permit package, and 2) schedule a licensed well drilling contractor and California-certified laboratory. Permitting procedures are typically completed within 30 days following work plan approval, and drilling, surveyor, and laboratory contractors will be scheduled accordingly.

Drilling and sampling activities will take approximately one to two weeks. Laboratory analytical results will be received approximately two weeks thereafter.

A draft report will be prepared within two weeks from the receipt of the analytical data for review by all parties. A final report will be prepared within one week from the receipt of comments.

## **TABLE**

**Table 1. Maximum Laboratory Reporting Limits**

<b><u>Parameter</u></b>	<b>Soil <sup>1</sup> (<u>mg/kg</u>)</b>	<b>Groundwater <sup>2</sup> (<u>µg/L</u>)</b>
TPH-g	MDL	MDL
TPH-d	MDL	MDL
Benzene	0.64	0.35
Toluene	520	720
Ethylbenzene	400	1,300
Xylenes	270	210
MTBE	32	11
DIPE	MDL	MDL
TAME	MDL	MDL
ETBE	MDL	MDL
TBA	MDL	MDL

<sup>1</sup> Soil reporting limits are based on EPA Region IX residential soil preliminary remediation goals (PRGs).

<sup>2</sup> Groundwater reporting limits are based on EPA Region IX tap water PRGs.

mg/kg – milligram per kilogram

µg/L – microgram per liter

MDL – method detection limit (no PRG available)

TPH-g – total petroleum hydrocarbons as gasoline

TPH-d - total petroleum hydrocarbons as diesel

MTBE - methyl tertiary butyl ether

DIPE - di-isopropyl ether

ETBE - ethyl tertiary butyl ether

TAME - tertiary-amyl methyl ether

TBA - tertiary butanol

## **1.0 SAMPLING AND ANALYSIS PLAN**

General procedures used by Insight Environmental, Engineering and Construction, Inc. (Insight) in site assessments for drilling exploratory borings, soil sampling, installing temporary monitoring wells, sampling monitoring wells, analyzing samples, and interpreting data are described herein. These general procedures are used to provide consistent and reproducible results; however, some procedures may be refined based on site conditions and field data. In addition, this appendix presents a quality assurance plan adopted to conduct activities described herein.

### **1.1 PRE-FIELD ACTIVITIES**

#### **1.1.1 Health Safety Plan**

Field work performed at the site by Insight will be conducted according to guidelines established in the Site Health and Safety Plan (SHSP). The SHSP is a document which describes the hazards that may be encountered in the field, and specifies protective equipment, work procedures, and emergency information. A copy of the SHSP will be available at the site for reference by appropriate parties during work.

#### **1.1.2 Locating Underground Utilities**

Prior to commencement of any work that is to be done below surface grade, the location of the excavation, boring, etc. will be marked with white paint, as required by law. An underground locating service (such as Underground Service Alert) will be contacted. The locating company will contact the owners of the various utilities in the vicinity of the site to mark the locations of their underground utilities.

### **1.2 FIELD METHODS AND PROCEDURES**

#### **1.2.1 Drilling and Soil Sampling**

Soil borings will be drilled using a direct push technology (DPT) drill rig. Soil samples will be obtained by advancing a modified California split-spoon sampler equipped with stainless steel liners (or equivalent), Shelby tubes, or piston sampler into undisturbed soil beyond the tip of the drilling apparatus. Soil will be logged by a geologist according to the Unified Soil Classification System (USCS) and standard geological techniques.

Soil sampling equipment will be cleaned with a detergent-water solution (Liquinox or TSP), rinsed with clean water, and equipped with clean liners between sampling intervals. A consulting geologist will oversee cleaning of all downhole tools between each boring to reduce the possibility of cross contamination. Steam cleaning effluent will be contained in 55-gallon drums and will be temporarily stored on-site.

### **1.2.2 Soil Classification**

Samples will be classified on-site by a field geologist in accordance with the USCS. Representative portions of the samples will be retained for further examination and for verification of the field classification. Logs of the borings indicating the depth and identification of the various strata and pertinent information will be prepared. Exploratory boring logs and well construction details will be prepared for the final written report.

### **1.2.3 Stockpiled Drill Cutting and Soil Sampling**

Soil generated during drilling operations will be drummed on-site, based on screening results. The characterization of the soil will be based on laboratory analytical results. Analytical reports will be sent to a subcontractor for profiling/characterization of the soil and subsequent removal.

### **1.2.4 Sample Identification and Chain-of-Custody**

Sample identification and chain-of-custody procedures document sample possession from the time of collection to the ultimate disposal. Each sample container submitted for analysis will have a label affixed to it to identify the job number, sampler, date, and time of sample collection, and a sample number unique to that sample. This information, in addition to a description of the sample, field measurements made, sampling methodology, names of on-site personnel, and any other pertinent field observations, will be recorded on the borehole log or in the field records. A chain-of-custody form will be used to record possessions of the sample from time of collection to its arrival at the laboratory. When the samples are shipped, the person in custody of them will relinquish the samples by signing the chain-of-custody form and noting the time.

### **1.2.5 Equipment Cleaning**

Laboratory-supplied sample bottles, caps, and septa used for sampling for volatile and semi-volatile organics will be triple rinsed with high-purity deionized water. After being rinsed,

sample bottles will be dried overnight at a temperature of 200° C. Sample caps and septa will be dried overnight at a temperature of 60° C. Sample bottles, caps, and septa will be protected from solvent contact between drying and actual use at the sample site. Sampling containers will be used only once and will be discarded after analysis is complete.

Laboratory-supplied plastic bottles and caps used in sampling for metals will be soaked overnight in a 1% nitric acid solution. Next, the bottles and caps will be triple rinsed with deionized water. Finally, the bottles and caps will be air dried before being used at the site. Plastic bottles and caps will be constructed of linear polyethylene or polypropylene. Sampling containers will be used only once and discarded after analysis is complete. Glass and plastic bottles used by Insight to collect groundwater samples will be supplied by the laboratory.

Before the sampling event is started, equipment that will be placed in the well, or will come in contact with the groundwater, will be disassembled and cleaned thoroughly with detergent water, and then thoroughly rinsed with deionized water. Any parts that may absorb contaminants, such as plastic pump valves, etc., will be cleaned as described above or replaced.

#### **1.2.6 Groundwater and Liquid Phase Hydrocarbon Depth Assessment**

A water/hydrocarbon interface probe will be used to assess the liquid phase petroleum hydrocarbon (LPH) thickness, if present, and a water level indicator will be used to measure the groundwater depth in the monitoring wells that do not contain LPH. Depth to groundwater or LPH will be measured from a datum point at the top of each monitoring well casing. The datum point is typically a notch cut in the north side of the casing edge.

#### **1.2.7 Monitoring Well Purging and Sampling**

Monitoring wells will be purged using a pneumatic pump or bailer until pH, temperature, and conductivity of the purge water have been stabilized. After recharging, a groundwater sample will be collected from each of the wells using a pneumatic pump or disposable micro-bailer.

When well samples for the volatile organic analysis are being collected, the flow of groundwater from the bailer will be regulated to minimize turbulence and aeration. Glass bottles of at least 40-milliliters volume will be filled completely to prevent air from remaining in the bottle. A positive meniscus forms when the bottle is completely full. A convex Teflon™ septum will be placed over the positive meniscus to eliminate air. After the bottle is capped, it will be

inverted to verify that it contains no air bubbles. The sample containers for the other parameters will be fitted, filtered as required, and capped.

The water sample will be collected, labeled, and handled according to the Quality Assurance Plan. Water generated during the monitoring events will be disposed of at approved recycling facilities.

## **2.0 QUALITY ASSURANCE PLAN**

Procedures to provide data quality have been established and documented so that conditions adverse to quality (such as deficiencies; deviations; nonconformants; and defective material, services, and/or equipment) can be promptly identified and corrected.

### **2.1 INTERNAL QUALITY ASSURANCE CHECKS**

Internal quality assurance procedures will be used to provide reliability of monitoring and measurement of data. Both field and laboratory quality assurance checks, as listed below, will be used to evaluate the reliability of sampling and analysis results. Data quality indicators (DQI) will be used by the laboratory to meet internal quality assurance procedures. Internal quality assurance procedures generally include:

#### Laboratory Quality Assurance

- Documentation of instrument performance checks;
- Documentation of instrument calibration;
- Documentation of traceability of instrument standards, samples, and data; and
- Documentation of analytical and quality control (QC) methodology (QC methodology includes use of spiked samples, duplicate samples, split samples, use of reference blanks, and check standards to check method accuracy and precision.)

#### Field Quality Assurance

In addition to the DQIs, the following internal checks will be conducted by Insight:

- Documentation of sample preservation and transportation, and
- Documentation of field instrument calibration and irregularities in performance.

### **2.2 GENERAL SAMPLE COLLECTION AND HANDLING PROCEDURES**

Proper collection and handling are essential to ensure the quality of a sample. Each sample will be collected in a suitable container, preserved correctly for the intended analysis, and stored prior to analysis for no longer than the maximum allowable holding time.

## **2.3 SAMPLE LABELING AND PRESERVATION**

Label information includes a unique sample identification number, date, and time. After labeling, all soil and water samples will be placed in a Ziploc<sup>®</sup> type bag and placed in an ice chest cooled to approximately 4° C. Chemical preservation will be controlled by the required analysis and will be noted on the chain-of-custody form. Trip blanks supplied by the laboratory will accompany groundwater sample containers and groundwater samples.

## **2.4 CHAIN-OF-CUSTODY**

The chain-of-custody form is used to record possession of the sample from time of collection to its arrival at the laboratory. When the samples are shipped, the person in custody of them relinquishes the samples by signing the chain-of-custody form and noting the time. The sample-control officer at the laboratory verifies sample integrity and confirms that the samples were collected in the proper containers, preserved correctly, and contain adequate volumes for analysis. These conditions will be noted on a laboratory sample receipt checklist, which will be included in the laboratory report.

If these conditions are met, each sample will be assigned a unique log number for identification throughout analysis and reporting. The log number will be recorded on the chain-of-custody form and in the legally-required log book maintained by the laboratory. The sample description, date received, client's name, and other relevant information will also be recorded.

## **2.5 ANALYTICAL METHODS**

### **2.5.1 Mobile Laboratory Analysis**

All soil samples will be analyzed in the field to obtain real-time data. These analyses will consist of the following parameters:

- BTEX
- TPH-g
- TPH-D
- MTBE
- DIPE
- ETBE

- TAME
- TBA

These tests will be conducted in accordance with EPA Methods 8015 and 8260.

### **2.5.2 Laboratory Analyses**

Soil and groundwater samples collected during site investigation activities and sampling of monitoring wells will be analyzed under a utilizing a mobile laboratory. Samples will be analyzed using analytical methods outlined in United States Environmental Protection Agency (EPA) Manual SW 846 and approved by the California Regional Water Quality Control Board – Central Valley Region in the Leaking Underground Fuel Tanks manual and appendices.

All soil and groundwater samples will be analyzed for total petroleum hydrocarbons as diesel (TPH-D) using EPA Method 8015B/DHS LUFT. Total petroleum hydrocarbons as gasoline (TPH-G), benzene, toluene, ethyl benzene, and total xylenes (BTEX), methyl tertiary butyl ether (MTBE), ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME), diisopropyl ether (DIPE), and tertiary butyl alcohol (TBA) will be analyzed using EPA Method 8260B.

Internal laboratory quality assurance checks will be the responsibility of the contract laboratory. Data and reports submitted by field personnel and the contract laboratory will be reviewed and maintained in the project files.

## **2.6 DATA REVIEW AND VERIFICATION**

Data quality indicator parameters will be evaluated by the contract state-certified laboratory against the frequency and acceptance criteria described in the laboratory DQI tables. Data that are out of compliance with the laboratory criteria will be flagged in the laboratory analytical report and will be identified in the report summary table. Insight will evaluate the field procedures against the frequency and acceptance criteria identified in the field DQI table. The overseeing registered professional will review field documentation (boring logs, sampling sheets, chain-of-custody documents, laboratory sample receipt forms, etc.) and identify relevant issues/problems that effect data and overall applicability.

FAX (510) 337-9335

Messrs. Rashid Ghafoor and Waseem Iqbal  
226 Havenwood Circle  
Pittsburg, CA 94565-7364

Dear Messrs. Ghafoor and Iqbal:

Subject: Fuel Case RO0002931 & Global ID # T0600174667, Shore Acres Gas,  
403 E. 12<sup>th</sup> St., Oakland, CA 94606

Alameda County Environmental Health (ACEH) has reviewed the file for the subject site including the Phase II Site Assessment Field Activities Shore Acres Gas 403 E. 12<sup>th</sup> St. Oakland, California prepared by Geofon Incorporated. Two borings were advanced to a depth of 20' below ground surface (bgs) and two soil samples collected from each borehole. Up to 600 parts per million (ppm) total petroleum hydrocarbons as diesel (TPHd), 3600 ppm total petroleum hydrocarbons as gasoline (TPHg), and 17, 180, 98, 440, 0.54 ppm benzene, toluene, ethyl benzene, xylenes and MTBE, respectively were detected in the soil samples. We have determined that additional information is required to investigate the release of petroleum hydrocarbons to soil and groundwater at this site. Please address the following technical comments and submit the requested technical report requested below.

#### TECHNICAL COMMENTS

##### 1. Conduit Study

The purpose of the conduit study is to locate potential migration pathways and potential conduits and determine the probability of the plume encountering preferential pathways and conduits that could spread the contamination. Of particular concern is the identification of abandoned wells and improperly-destroyed wells that can act as conduits to deeper water bearing zones.

We request that you perform a conduit study that details the potential migration pathways and potential conduits (utilities, storm drains, etc.) that may be present in the vicinity of the site. Provide a map showing the location and depth of all utility lines and trenches including sewers and storm drains within and near the plume area.

The conduit study shall include a detailed well survey of all wells (monitoring and production wells: active, inactive, standby, destroyed (sealed with concrete), abandoned (improperly destroyed); and dewatering, drainage, and cathodic protection wells) within a ¼ mile radius of the subject site. As part of your detailed well survey, please perform a background study of the historical land uses of the site and properties in the vicinity of the site. Use the results of your background study to determine the existence of unrecorded/unknown (abandoned) wells, such as old deep agricultural wells, that can act as pathways for migration of contamination at and/or from your site. Please review historical maps such as

Sanborn maps, aerial photos, etc., when performing the background study. Provide a map(s) showing the location of all wells identified in your study.

Using the results of your conduit study and data from previous investigations at the site you are to develop the initial three-dimensional conceptual model of site conditions. You are to use this initial conceptual model to determine the appropriate configuration for sampling points in the Soil and Water Investigation work plan. Discuss your analysis and interpretation of the results of the conduit study (including the detailed well survey) and report your results in the Work Plan. Describe your initial conceptual model of site conditions and explain your rationale for the configuration of sampling points in the work plan requested below.

## **2. Contaminant Plume Definition**

The purpose of contaminant plume definition is to determine the three-dimensional extent of contamination (MTBE, petroleum products, and associated blending compounds and additives) in soil and groundwater from the unauthorized release at your site.

The three-dimensional extent of contamination in soil and groundwater at your site is undefined. Therefore, we request that you perform a detailed, expedited site assessment using depth discrete sampling techniques on borings installed along transects to define and quantify the full three-dimensional extent of MTBE, Total Petroleum Hydrocarbons, Benzene and other contamination in groundwater.

A substantial part of your plume(s) should be defined with one mobilization by using expedited site assessment techniques at your site. The appropriately-qualified professionals performing field work at your site will be using the data obtained from the field work to refine the initial three-dimensional conceptual model of site conditions developed during the conduit study and review of background information. Using expedited site assessment techniques, the appropriately-qualified professionals are to analyze the field data as it is collected, refine the conceptual model as new data is produced and evaluated, and modify the sampling and analysis program as needed, filling data gaps and resolving anomalies prior to demobilization.

Expedited site assessment tools and methods are a scientifically valid and cost-effective approach to fully define the three-dimensional extent of the plume. Technical protocol for expedited site assessments are provided in the U.S. Environmental Protection Agency's (EPA) "Expedited Site Assessment Tools for Underground Storage Tank Sites: A Guide for Regulators" (EPA 510-B-97-001), dated March 1997.

Discuss your proposal for performing this work in the work plan requested below. Report the results of your investigation in the Soil and Water Investigation (Results of Expedited Site Assessment) Report requested below.

## TECHNICAL REPORT REQUEST

Please submit the following technical report to our office according to the following schedule:

- April 27, 2007- Work Plan for Contaminant Plume Definition

### ELECTRONIC SUBMITTAL OF REPORTS

Effective **January 31, 2006**, the Alameda County Environmental Cleanup Oversight Programs (LOP and SLIC) require submission of all reports in electronic form to the county's ftp site. Paper copies of reports will no longer be accepted. The electronic copy replaces the paper copy and will be used for all public information requests, regulatory review, and compliance/enforcement activities. Instructions for submission of electronic documents to the Alameda County Environmental Cleanup Oversight Program ftp site are provided on the attached "Electronic Report Upload (ftp) Instructions." Please do not submit reports as attachments to electronic mail.

Submission of reports to the Alameda County ftp site is an addition to existing requirements for electronic submittal of information to the State Water Resources Control Board (SWRCB) Geotracker website. Submission of reports to the Geotracker website does not fulfill the requirement to submit documents to the Alameda County ftp site. In September 2004, the SWRCB adopted regulations that require electronic submittal of information for groundwater cleanup programs. For several years, responsible parties for cleanup of leaks from underground storage tanks (USTs) have been required to submit groundwater analytical data, surveyed locations of monitor wells, and other data to the Geotracker database over the Internet. Beginning July 1, 2005, electronic submittal of a complete copy of all necessary reports was required in Geotracker (in PDF format). Please visit the SWRCB website for more information on these requirements ([http://www.swrcb.ca.gov/ust/cleanup/electronic\\_reporting](http://www.swrcb.ca.gov/ust/cleanup/electronic_reporting)).

In order to facilitate electronic correspondence, we request that you provide up to date electronic mail addresses for all responsible and interested parties. Please provide current electronic mail addresses and notify us of future changes to electronic mail addresses by sending an electronic mail message to me at [barney.chan@acgov.org](mailto:barney.chan@acgov.org).

### PERJURY STATEMENT

All work plans, technical reports, or technical documents submitted to ACEH must be accompanied by a cover letter from the responsible party that states, at a minimum, the following: "I declare, under penalty of perjury, that the information and/or recommendations contained in the attached document or report is true and correct to the best of my knowledge." This letter must be signed by an officer or legally authorized representative of your company. Please include a cover letter satisfying these requirements with all future reports and technical documents submitted for this fuel leak case.

## PROFESSIONAL CERTIFICATION & CONCLUSIONS/RECOMMENDATIONS

The California Business and Professions Code (Sections 6735, 6835, and 7835.1) requires that work plans and technical or implementation reports containing geologic or engineering evaluations and/or judgments be performed under the direction of an appropriately registered or certified professional. For your submittal to be considered a valid technical report, you are to present site specific data, data interpretations, and recommendations prepared by an appropriately licensed professional and include the professional registration stamp, signature, and statement of professional certification. Please ensure all that all technical reports submitted for this fuel leak case meet this requirement.

## UNDERGROUND STORAGE TANK CLEANUP FUND

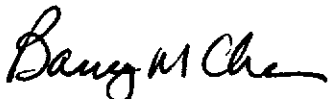

Please note that delays in investigation, later reports, or enforcement actions may result in your becoming ineligible to receive grant money from the state's Underground Storage Tank Cleanup Fund (Senate Bill 2004) to reimburse you for the cost of cleanup.

## AGENCY OVERSIGHT

If it appears as though significant delays are occurring or reports are not submitted as requested, we will consider referring your case to the Regional Board or other appropriate agency, including the County District Attorney, for possible enforcement actions. California Health and Safety Code, Section 25299.76 authorizes enforcement including administrative action or monetary penalties of up to \$10,000 per day for each day of violation.

If you have any questions, please call me at (510) 567-6765.

Sincerely,

Barney M. Chan  
Hazardous Materials Specialist

**FACILITY INFORMATION**

ID#: 01500104

NAME: BEDFORD PROPERTY SITE

ADDRESS: 54 EMBARCADERO STREET  
OAKLAND, CA

STATUS (DATE): PROPERTY/SITE REFERRED TO RWQCB (07/07/1994)

STANDARD INDUSTRIAL CLASSIFICATION BELIEVED TO BE CAUSE OF (POTENTIAL) CONTAMINATION:

**WHOLESALE TRADE - DURABLE GOODS**

ACCESS TO SITE: NOT REPORTED

GROUNDWATER CONTAMINATION: NOT REPORTED

**COMMENTS**

SITE LISTED ON CORTESE: SAMPLE RESULTS - UP TO 44,000 PPM OF TPH. RECORDS SEARCH: 1940S LUMBER WHOLESALER  
WITH POSSIBLE WOOD TREATMENT; 1980 FORD MOTOR CO. RENTED PART OF SITE; HAZARD MITIGATED - CONTAMINANTS  
WERE MOVED TO ONE END OF THE SITE. SITE TO BE USED AS A BASE FOR PARKING LOT. SF BAY RWQCB AWARE OF THIS  
ON-SITE CONTAMINATED SOIL. SITE SCREENING DONE: THE SITE IS CURRENTLY VACANT WITH NO SURFACE STRUCTURES.  
THE REMEDIATION IS NOT COMPLETE. RECOMMEND PRELIMINARY ENDANGERMENT ASSESSMENT (MED). DHS RECEIVED EPA  
FIT PRELIMINARY ASSESSMENT; EPA RECOMMENDS NFA (09/06/90). DHS RECOMMENDS PEA. SITE HAZARD RANKED WITH  
SCORE OF 4.50. SITE IS CURRENTLY VACANT AND PARTIALLY COVERED WITH GRAVEL. IT WAS OWNED BY THE TILDEN  
LUMBER & MILL CO. UNTIL 1929 DURING WHICH IT WAS BOUGHT BY SOUTHERN PACIFIC TRANSPORTATION CO. (SP). SP  
OWNED IT UNTIL 1987. THE VUKASINS COMMENCED OWNERSHIP OF THE PROPERTY AT THAT TIME. RECORDS INDICATE THAT  
PAST SITE USES INCLUDE: LUMBER OPERATIONS, RAILROAD TEAM-SPUR, AND FREIGHT STORAGE. SOIL AND GROUNDWATER  
CONTAMINATION HAS BEEN DOCUMENTED & IS BEING MONITORED.

NAME: **ASIAN HEALTH SERVICES**

ADDRESS: **814 WEBSTER STREET  
OAKLAND, CA**

STATUS (DATE): **NO ACTION - FOR CALMORTGAGE ONLY (07/07/1995)**

STANDARD INDUSTRIAL CLASSIFICATION BELIEVED TO BE CAUSE OF (POTENTIAL) CONTAMINATION:

**HEALTH SERVICES**

ACCESS TO SITE: **NOT REPORTED**

GROUNDWATER CONTAMINATION: **NOT REPORTED**

**COMMENTS**

PURSUANT TO THE MOU, DTSC HAS REVIEWED A PHASE I PRELIMINARY ENVIRONMENTAL ASSESSMENT FOR ASIAN HEALTH SERVICES (AHS). THE SUBJECT PROPERTY CURRENTLY CONTAINS A VACANT THREE-STORY COMMERCIAL OFFICE BUILDING. AHS IS PROPOSING TO REMODEL THE BUILDING IN ORDER TO ACCOMMODATE A COMMUNITY HEALTH CLINIC. A SUPPLEMENTAL PHASE I ENVIRONMENTAL ASSESSMENT REPORT WAS PREPARED BY DTSC AND CONCLUDED THAT NO ACTION WAS NEEDED FOR THIS PROPERTY; THERE WAS CONTAMINATION ON THE PROPERTY.

## VOLUNTARY CLEANUP PROGRAM (VCP)

**MAP ID# 3**

Distance from Property: 0.06 mi. E

### SITE INFORMATION

ID#: 01420128

NAME: CONTAINER FREIGHT

ADDRESS: 1285 5TH ST

OAKLAND CA94606

SIC CLASSIFICATION: TRUCKING & WAREHOUSING

STATUS (DATE) VOLUNTARY CLEANUP PROGRAM  
(05/10/1994)

LEAD AGENCY DEPT OF TOXIC SUBSTANCES CONTROL

### SITE BACKGROUND

THE SITE IS PART OF THE CYPRESS FREEWAY CONSTRUCTION PROJECT AND WAS FORMERLY A FREIGHT COMPANY. FORMER SITE USES INCLUDE A WAREHOUSE AND DISTRIBUTION FACILITY SINCE 1967. SITE ACTIVITIES CONSISTED OF UNLOADING CARGO FROM FREIGHT TRAINS AND TRANSFERRING TO TRUCKS. PRIOR TO THIS USE, THE SITE WAS OWNED BY THE COMMISSARY DEPARTMENT OF THE SOUTHERN PACIFIC RAILROAD. IT IS NOT KNOWN WHAT SITE ACTIVITIES TOOK PLACE WHEN IT WAS OWNED BY THE RAILROAD. CALTRANS PURCHASED THE SITE IN 1994 IN CONNECTION WITH RECONSTRUCTION OF THE CYPRESS FREEWAY. A LAND USE COVENANT STILL REMAINS TO BE PLACED ON THE PROPERTY.

### COMMENTS

(06/19/1995) - PEA APPROVED. CALTRANS DEMOLISHED THE EXISTING WAREHOUSE BUILDING. A 700-GALLON UNDERGROUND DIESEL TANK WAS ALSO REMOVED UNDER THE OVERSIGHT OF ALAMEDA COUNTY.

(07/03/1995) - RIFS CONDUCTED. SITE INVESTIGATIONS HAVE SHOWN THAT THE SOIL AND GROUNDWATER CONTAIN ELEVATED LEVELS OF PETROLEUM HYDROCARBONS, ARSENIC, LEAD, VOLATILE ORGANIC COMPOUNDS AND SEMI-VOLATILE ORGANIC COMPOUNDS.

(09/22/1997) - PER THE FEASIBILITY STUDY/REMEDIAL ACTION PLAN, CALTRANS EXCAVATED SOILS AND DISPOSED THEM AT A PERMITTED OFF-SITE LOCATION. GROUNDWATER MONITORING WELLS WERE ALSO INSTALLED AND HAVE BEEN MONITORED QUARTERLY. AN ASPHALT CAP HAS ALSO BEEN INSTALLED ON THE PROPERTY.

## ENVIRONMENTAL RECORDS DEFINITIONS - FEDERAL

AIRSAFS	Aerometric Information Retrieval System / Air Facility Subsystem	(2/2005)
---------	--	----------

The EPA modified the Aerometric Information Retrieval System (AIRS) to a database that exclusively tracks the compliance of stationary sources of air pollution with EPA regulations: the Air Facility Subsystem (AFS). Since this change in 2001, the management of the AIRS/AFS database was assigned to EPA's Office of Enforcement and Compliance Assurance.

BRS	Biennial Reporting System	(1/2003)
-----	---------------------------	----------

The United States Environmental Protection Agency (EPA), in cooperation with the States, biennially collects information regarding the generation, management, and final disposition of hazardous wastes regulated under the Resource Conservation and Recovery Act of 1976 (RCRA), as amended. The purpose of this report is to communicate the findings of EPA's Biennial Reporting System (BRS) data collection efforts to the public, government agencies, and the regulated community.

Currently, the EPA states that data collected between 1991 and 1997 was originally a part of the defunct Biennial Reporting System and is now incorporated into the RCRAInfo data system.

DOCKETS	Epa Docket Data	(12/2005)
---------	-----------------	-----------

EPA Docket data lists Civil Case Defendants, filing dates as far back as 1971, laws broken including section, violations that occurred, pollutants involved, penalties assessed and superfund awards all by facility and geographically.

DOD	Department Of Defense Sites	(1/2005)
-----	-----------------------------	----------

This information originates from the National Atlas of the United States, publication date October 2005. Army DOD, Army Corps of Engineers DOD, Air Force DOD, Navy DOD and Marine DOD areas of 640 acres or more are included.

ERNS	Emergency Response Notification System	(1/2004)
------	--	----------

This database contains data on reported releases of oil and hazardous substances. The data comes from spill reports made to the EPA, U.S. Coast Guard, the National Response Center and/or the Department of Transportation.

FUDS	Formerly Used Defense Sites	(3/2006)
------	-----------------------------	----------

The 2005 FUDS inventory includes properties previously owned or leased to the United States and under Secretary of Defense jurisdiction. The remediation of these properties is the responsibility of the Department of Defense.

HMIRS	Hazardous Materials Incident Reporting System	(2/2004)
-------	---	----------

The HMIRS database contains unintentional hazardous materials release information reported to

## ENVIRONMENTAL RECORDS DEFINITIONS - FEDERAL

the US Department of Transportation.

**INDLPSTR09 Indian Leaking Underground Storage Tanks (12/2005)**

Leaking underground storage tanks on Indian lands located in Region 9 include the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

**INDPSTR09 Indian Underground Storage Tanks (12/2005)**

Underground storage tanks on Indian lands located in Region 9 include the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

**ODI Open Dump Inventory (6/1985)**

Information on facilities or sites where solid waste is disposed of which is not a sanitary landfill which meets the criteria promulgated under section 6944 of the Solid Waste Disposal Act (42 U.S.C. 6941 et seq.) and which is not a facility for disposal of hazardous waste.

**RODS Record Of Decision System (4/2004)**

These decision documents maintained by the U.S. EPA describe the chosen remedy for NPL (Superfund) site remediation. They also include site history, site description, site characteristics, community participation, enforcement activities, past and present activities, contaminated media, the contaminants present, and scope and role of response action.

**USBF United States Brownfields Management System (8/2006)**

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. The EPA maintains the activities, including grantee assessment, cleanup and redevelopment, of the various Brownfield grant programs through the Brownfields Management System database.

**USCERCLIS Comprehensive Environmental Response, Compensation & Liability Information System (1/2007)**

CERCLIS is the repository for site and non-site specific Superfund information in support of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). This database contains an extract of sites that have been investigated or are in the process of being investigated for potential environmental risk.

**USDNPL Delisted National Priority List (1/2007)**

This database includes U.S. Environmental Protection Agency (EPA) Final National Priority List sites where remedies have proven to be satisfactory or sites where the original analyses were inaccurate, and the site is no longer appropriate for inclusion on the NPL, and final publication in the Federal

## ENVIRONMENTAL RECORDS DEFINITIONS - FEDERAL

Register has occurred.

USEC	Federal Engineering Controls	(3/2006)
------	------------------------------	----------

A listing of site locations where Engineering Controls are in effect, such as a cap, barrier, or other device engineering to prevent access, exposure, or continued migration of contamination. Used in conjunction with Institutional Controls.

USICIS	Integrated Compliance Information System (formerly Dockets)	(11/2005)
--------	---	-----------

ICIS is a case activity tracking and management system for civil, judicial, and administrative federal EPA enforcement cases. ICIS contains information on federal administrative and federal judicial cases under the following environmental statutes: the Clean Air Act, the Clean Water Act, the Resource Conservation and Recovery Act, the Emergency Planning and Community Right-to-Know Act - Section 313, the Toxic Substances Control Act, the Federal Insecticide, Fungicide, and Rodenticide Act, the Comprehensive Environmental Response, Compensation, and Liability Act, the Safe Drinking Water Act, and the Marine Protection, Research, and Sanctuaries Act.

USNFRAP	No Further Remedial Action Planned-cerclis Archives	(8/2006)
---------	---	----------

This database includes sites, which have been determined by the EPA, following preliminary assessment, to no longer pose a significant risk or require further activity under CERCLA. After initial investigation, no contamination was found, contamination was quickly removed or contamination was not serious enough to require Federal Superfund action or NPL consideration.

USNPL	National Priority List	(1/2007)
-------	------------------------	----------

This database includes U.S. Environmental Protection Agency (EPA) National Priority List sites that fall under the EPA's Superfund program, established to fund the cleanup of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action.

USPNPL	Proposed National Priority List	(1/2007)
--------	---------------------------------	----------

Listing of Proposed National Priority sites.

USRCRAC	Resource Conservation & Recovery Act - Corrective Action	(12/2006)
---------	--	-----------

This database includes hazardous waste sites listed with corrective action activity in the RCRAInfo system. The Corrective Action Program requires owners or operators of RCRA facilities (or treatment, storage, and disposal facilities) to investigate and cleanup contamination in order to protect human health and the environment. The EPA defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS).

## ENVIRONMENTAL RECORDS DEFINITIONS - FEDERAL

USRCRAG    Resource Conservation & Recovery Act - Generator    (12/2006)

This database includes sites listed as generators of hazardous waste (large, small, and exempt) in the RCRAInfo system. See RCRIS Description page for more information. The EPA defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS).

USRCRAT    Resource Conservation & Recovery Act - Treatment,  
Storage & Disposal    (12/2006)

This database includes sites listed as treatment, storage and/or disposal facilities of hazardous waste in the RCRAInfo system. The EPA defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS).

USTRI    Toxics Release Inventory    (12/2004)

This EPA database includes information about releases and transfers of toxic chemicals from manufacturing facilities.

## ENVIRONMENTAL RECORDS DEFINITIONS - STATE

**CAABST** Above Ground Storage Tanks (11/2006)

This database contains registered AST facility listings from the State Water Resources Control Board. Since 2006, tanks are required to contain a minimum (even as cumulative) of 1320 gallons to be in the program.

**CACDL** Clandestine Drug Labs (3/2006)

The California Department of Toxic Substance Control (DTSC) maintains this listing of illegal drug laboratories. The DTSC is required by Health and Safety code section 25354.5 to remove hazardous contaminants found at drug lab locations, such as highly volatile organic solvents and semi-volatile organic compounds, corrosive inorganic acids and bases, and any derivatives of the illicit drug.

**CACLEANER** Dry Cleaner Facilities (8/2006)

An inventory of drycleaner facilities that have registered EPA identification numbers:

- 7211 Power Laundries, Family and Commercial
- 7212 Garment Pressing, and Agents for Laundries and Drycleaners
- 7213 Linen Supply
- 7215 Coin-Operated Laundries and Drycleaning
- 7216 Drycleaning Plants, Except Rug Cleaning
- 7217 Carpet and Upholstery Cleaning
- 7218 Industrial Launderers
- 7219 Laundry and Garment Services, N.E.C.

**CACORTESE** Cortese List (11/2002)

This historical listing includes sites designated by the State Water Resources Control Board (LUST), the Integrated Waste Board (SWIS), and the Department of Toxic Substance Control (CALSITES).

**CAEMI** Emissions Inventory Data (12/2004)

The Air Resources Board's Emissions Inventory Database contains criteria pollutant data and toxic data on facilities throughout the state of California for the 2004 inventory year.

**CAHISTUST** Historical Underground Storage Tanks (12/1987)

The Hazardous Substance Storage Container Database is a historical list of Underground Storage Tank sites, compiled from tank survey and registration information collected at one time between 1984 and 1987. The hazardous substances stored within these tanks includes, but not restricted to, petroleum products, industrial solvents, and other materials.

**CALSITES** Calsites Database (9/2004)

This historical database was maintained by the Department of Toxic Substance Control for more

## ENVIRONMENTAL RECORDS DEFINITIONS - STATE

than a decade. CALSITES contains information on Brownfield properties with confirmed or potential hazardous contamination. In 2006, DTSC introduced EnviroStor as the latest Brownfields site database.

**CATOXPITS Toxic Pits Cleanup Act Sites (7/1995)**

Toxic Pits are sites with possible contamination of hazardous substances where cleanup is necessary. This listing is no longer updated by the State Water Resources Control Board.

**CAWIP Well Investigations Program Case List San Gabriel And San Fernando Valley Cleanup Programs (5/2006)**

The Well Investigations Case List for the San Gabriel and San Fernando Valley Cleanup Programs is maintained by the State Water Resources Control Board.

**CAWMUDS Waste Management Unit Database (1/2000)**

The WMUDS/SWAT database tracks and inventories waste management units.

**CHMIRS California Hazardous Material Incident Report System (12/2003)**

CHMIRS contains accidental or spill release information on reported hazardous material incidents from 1993 to 2003.

**DTSCDR Dtsc's Deed Restrictions (3/2006)**

The Department of Toxic Substances Control's Deed Restrictions. According to the DTSC, restricted land use indicates whether the site or area within the site has an environmental restriction recorded and/or other institutional control preventing certain types of land use or activities.

**DTSCHWT Dtsc's Registered Hazardous Waste Transporters (3/2006)**

The Department of Toxic Substances Control's Registered Hazardous Waste Transporters.

**ENVIROSTOR Site Mitigation And Brownfields Reuse Program Database (5/2006)**

The Department of Toxic Substances Control's Site Mitigation and Brownfields Reuse Program database (Envirostor) identifies sites with confirmed or potential contamination and sites where further investigation may be necessary. The EnviroStor database contains the following: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

**HWTS Hazardous Waste Tanner Summary (12/2002)**

This data is prepared from information extracted from copies of hazardous waste manifests received each year by the Department of Toxic Substances Control. The Hazardous Waste Summary Report (Tanner Report) currently includes manifest data from the 1993 through the 2002

## ENVIRONMENTAL RECORDS DEFINITIONS - STATE

reporting years.

LUST	Leaking Underground Storage Tanks	(11/2005)
------	-----------------------------------	-----------

This database is maintained by the State Water Resources Control Board. LUST records contain an inventory of reported leaking underground storage tank incidents.

NFA	No Further Action Determination	(7/2005)
-----	---------------------------------	----------

NO FURTHER ACTION DETERMINATION - This category contains properties at which DTSC has made a clear determination that the property does not pose a problem to the environment or to public health.

NFE	Sites Needing Further Evaluation	(7/2005)
-----	----------------------------------	----------

PROPERTIES NEEDING FURTHER EVALUATION - This category contains properties that are suspected of being contaminated. These are unconfirmed contaminated properties that need further assessment.

REF	Referred To Another Local Or State Agency	(7/2005)
-----	---	----------

UNCONFIRMED PROPERTIES - This category contains properties where contamination has not been confirmed and which were determined as not requiring direct DTSC Site Mitigation Program action or oversight. Accordingly, these sites have been referred to another state or local regulatory agency.

SCH	School Property Evaluations	(7/2005)
-----	-----------------------------	----------

SCHOOL PROPERTY EVALUATION PROGRAM - This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

SLIC	Spills, Leaks, Investigation & Cleanup Recovery Listing	(4/2006)
------	---	----------

These records are maintained by the California Regional Water Quality Control Board (RWQCB). This list includes contaminated sites that impact groundwater or have the potential to impact ground water.

SWEEPS	Statewide Environmental Evaluation And Planning System	(10/1994)
--------	--	-----------

The Statewide Environmental Evaluation and Planning System (SWEEPS) contains a historical listing of active and inactive underground storage tank locations from the State Water Resources Control Board. The hazardous substances stored within these tanks includes, but not restricted to, petroleum products, industrial solvents, and other materials. Refer to CUPA listing for source of current data.

## ENVIRONMENTAL RECORDS DEFINITIONS - STATE

SWIS	Solid Waste Information System	(10/2005)
------	--------------------------------	-----------

These records contain an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites.

USTCUPA	Underground Storage Tanks	(1/2006)
---------	---------------------------	----------

An underground storage tank is an individual tank or group of tanks that store hazardous substances. Underground storage tanks are completely or considerably below the ground surface. This database is maintained by the State Water Resources Control Board.

VCP	Voluntary Cleanup Program	(9/2004)
-----	---------------------------	----------

The California Voluntary Cleanup program provides regulatory oversight by the Department of Toxic Substance Control (DTSC) to project proponents desiring to address mitigation activities at sites which have lower health and/or environmental risk than sites which are currently being addressed by DTSC.

## ENVIRONMENTAL RECORDS DEFINITIONS - LOCAL

**CAACCS** Alameda County Contaminated Sites (1/2007)

Listing of sites in Alameda county with soil and/or groundwater contamination from chemical spills, releases or leaking underground storage tanks. This list does not include all cities, such as Fremont, Newark, Union City.

### ALAMEDA

- Alameda County EHS (1/2007)

**CAAOC** San Gabriel Valley Areas Of Concern (1/2006)

A listing of the San Gabriel Valley Superfund Sites located in Los Angeles County with Volatile Organic Compound groundwater contamination.

- EPA Region 9 (1/2006)

**CAFSW** Fresno County Cupa/solid Waste Programs Resource List (1/2007)

### FRESNO

County of Fresno - Hazardous Materials and Solid Waste Prog (1/2007)

**CALASM** Site Mitigation List Of Industrial Sites With A Spill Or Complaint (1/2006)

Site Mitigation List of industrial sites with a spill or complaint for Los Angeles County.

### LOS ANGELES

- Soil Remediation Unit (1/2006)

**CARCMW** Riverside County Medical Waste Facilities (4/2000)

Medical Facilities in Riverside County, CA that dispose of medical waste.

### RIVERSIDE

- Environmental Resources Mgt Division (4/2000)

**CASBFD** Hazardous Site Listing - San Bernardino County (10/2006)

Information provided in this database includes a listing of permitted sites in San Bernardino County, CA. This listing is maintained by the San Bernardino County Fire Department, Hazardous Materials Division. Included are underground storage tanks, medical waste handlers/generators, hazardous waste handlers, hazardous waste generators and waste oil generators/handlers.

### SAN BERNARDINO

San Bernardino County Fire Dept. - Hazardous Materials Division (10/2006)

**CASCHMS** Sacramento County Hazardous Materials Sites (8/2006)

Master list of potentially hazardous material sites in Sacramento County.

### SACRAMENTO

- County of Sacramento Environmental Management Dept (8/2006)

## ENVIRONMENTAL RECORDS DEFINITIONS - LOCAL

**CASCTL** Sacramento County Toxic Case List (8/2006)

Listing of sites in Sacramento County with an unauthorized release of a potentially hazardous material.

### SACRAMENTO

- County of Sacramento-Environmental Mgt Dept (8/2006)

**CAVCIUST** Ventua County Cupa Program Inactive Underground Tank Sites (8/2006)

Listing of inactive underground tank sites located in Ventura County.

### VENTURA

- (8/2006)

**USTCUPA** Underground Storage Tanks, City Of Berkeley

This database contains active UST facility listings gathered from local Certified Unified Program Agencies (CUPA). CUPA's are local agencies that have been certified by the CAL EPA to implement state environmental programs within the local agency's jurisdiction. The agencies (county, city, JPA - Joint Powers Authority) provide oversight of businesses that deal with hazardous materials, aboveground and underground storage tanks. See the following for CUPA listing.

### ALAMEDA

City of Berkeley - Toxic Management Division  
City of Fremont - Fremont Fire Department  
City of Oakland - Office of Emergency Services  
City of Pleasanton / Livermore - Livermore-Pleasanton Fire Department  
City of Union City - Fire Department

### AMADOR

County of Amador - Environmental Health Department

### CALAVERAS

County of Calaveras - Environmental Health Department

### COLUSA

County of Colusa - Environmental Health

### DEL NORTE

County of Del Norte - Department of Health and Social Services

### EL DORADO

County of El Dorado - Solid Waste Division

### GLENN

County of Glenn - Air Pollution Control District

### IMPERIAL

County of Imperial - Department of Planning and Building

### INYO

County of Inyo - Environmental Health Department

## RCRAInfo – Descriptions

### Acronyms

USRCRAG – GENERATOR

USRCRAC – CORRECTIVE ACTION

USRCRAT – TREATMENT, STORAGE & DISPOSAL (NON-CORRACTS)

### Generator Types

#### Large Quantity Generators:

- Generate 1,000 kg or more of hazardous waste during any calendar month; or
- Generate more than 1 kg of acutely hazardous waste during any calendar month; or
- Generate more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste during any calendar month; or
- Generate 1 kg or less of acutely hazardous waste during any calendar month, and accumulate more than 1kg of of acutely hazardous waste at any time; or
- Generate 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulated more than 100 kg of that material at any time.

#### Small Quantity Generators:

- Generate more than 100 and less than 1000 kilograms of hazardous waste during any calendar month and accumulate less than 6000 kg of hazardous waste at any time; or
- Generate 100 kg or less of hazardous waste during any calendar month, and accumulate more than 1000 kg of hazardous waste at any time.

#### Conditionally Exempt Small Quantity Generators:

- Generate 100 kilograms or less of hazardous waste per calendar month, and accumulate 1000 kg or less of hazardous waste at any time; or
- Generate one kilogram or less of acutely hazardous waste per calendar month, and accumulate at any time:
  - 1 kg or less of acutely hazardous waste; or
  - 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste; or
- Generate 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste during any calendar month, and accumulate at any time:
  - 1 kg or less of acutely hazardous waste; or
  - 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste.

Oakland, CA 94601

April 30, 2007

Ms. Jennifer Hurst  
Insight  
4620 Northgate Blvd, Ste.155  
Sacramento, CA 95834

Dear Ms. Hurst:

Re: Request for Utility Information for 403 E.12<sup>th</sup> St., Oakland

The enclosed prints identify the location of our gas & electric facilities. Please note, PG&E does not verify its gas and/or electric facilities through sending copies of its maps.

Please advise your construction contractor to exercise extreme caution when working in the area of our facilities. Please note that the 20" STL SHP GAS MAIN ON 4<sup>th</sup> AVE FROM E.10<sup>th</sup> TO E.15<sup>th</sup> ST and a 20" STL SHP GAS MAIN ON E.11<sup>th</sup> ST FROM 1<sup>ST</sup> AVE TO 4<sup>th</sup> AVE and 24" STL TP GAS MAN ON E.11<sup>th</sup> FROM 5<sup>th</sup> AVE to 11<sup>th</sup> AVE and CX-1 UG TRANS + CX-2 UG TRANS has been deemed as a critical facility. Hence requires PG&E stand-by personnel if excavations are performed in the vicinity of this facility. Contact Jerry Kroll, T&R Supervisor at (510) 437-2231 to request a stand-by.

Should you require map interpretation, please contact Denise Lee at (510) 437-2211 concerning gas facilities or Joe Paonessa at (510) 437-2115 or John Nunes at (510) 437-2241 concerning electric facilities. When it is clear that your project will involve relocating or installing PG&E facilities, please contact our clerk at (510) 437-2020. She will send you the necessary forms and instructions.

Be advised that it is a California Government Code and OSHA Regulation that all underground facilities must be marked and located prior to digging. The contractor must notify Underground Service Alert (USA) at (800) 227-2600 at least two working days prior to construction and delineate with white paint or other suitable markings the area to be excavated so we may mark our facilities on the surface of the street. These markings are only valid for 28 days. Requests to USA need to be made to renew markings if the most recent request has elapsed the 28-day time period.

If the contractor fails to adhere to these regulations and facility damages occur, it may be necessary to report the incident to the state. The contractor could be subject to a penalty of up to \$50,000 per incident (California Government Code 4216-4217 effective January 1, 1990). Of course, this action should not be necessary since we stand ready to mark our facilities upon request.

Sincerely,

Anthony Thompson

SUBJECT: Map Request – From 1<sup>st</sup> Ave to 10<sup>th</sup> Ave to Foothill Blvd to E 10<sup>th</sup> St in Oakland

Dear Joseph,

The attachment are 2 maps and 2 Engineering Standard Practice.

By receipt of requested documents, the DOCUMENT RECIPIENT agrees that he or she, and/or any other authorized representatives of the DOCUMENT RECIPIENT, will provide no copy (nor partial copy), will not redistribute any document to any other entity, business or individual, nor use the document for other than the specified purpose. At the point document is no longer required for use by the DOCUMENT RECIPIENT, the data shall be returned to EBMUD or destroyed.

Very truly yours,

Debra Kwan

Re: Attachments - Maps are to be used for general reference purposes only. The data was not compiled nor intended to be used to determine, establish, or reestablish a legal boundary or location of fixed works. Posted revisions include data that may be proposed, unverified or otherwise tentative in nature. EBMUD is not responsible for any errors that may be contained herein. If discrepancies are found please notify the EBMUD Mapping Unit.

# ENGINEERING STANDARD PRACTICE

ESP	251.1
EFFECTIVE	31 JAN 89
SUPERCEDES	15 NOV 79

SUBJECT:

PIPE DESIGNATIONS FOR 100 FT/IN DISTRIBUTION AND SERVICE MAP

## PURPOSE

The size, kind, lining, coating, and year of pipe installation are presented on the 100 ft. per inch Distribution and Service Maps with the designation scheme described here.

## PIPE SIZE

Main size will be shown to the nearest whole inch of net inside diameter.

## KIND, LINING AND COATING

LETTER CODE	KIND	LINING	COATING
A	Asbestos Cement	M - Mortar or Cement	M - Mortar or Cement
C	Cast Iron	B - Insulating Material: Epoxy,	B - Insulating Material
D	Ductile Iron	Asphaltic, Coal	BM - Insulating Material with Mortar Overcoat
K	Copper	Tar, etc.	MB - Mortar with Insulating Overcoat
N	Non-metallic, plastic, etc.	U - Unlined	PE - Polyethylene Coating
W	Wrought Iron		PP - Polypropylene Coating
L	Reinforced Concrete Cylinder		TW - Tape wrapped
R	Reinforced Concrete Non-Cylinder		
S	Steel		
T	Pretensioned Concrete Cylinder		
P	Prestressed Concrete Cylinder		

The pipeline description will then be expressed in a one, two, three or four letter code. The first position will invariably indicate the kind of pipe. If the pipe is bare, this will be the only position used. The second position will describe the lining. Again, if there is no coating, there would be only two positions. The third and fourth positions will describe the coating and/or an overcoat when used.

## YEAR OF INSTALLATION

The year of installation will be indicated with the last two digits from the year.

## PIPE DESIGNATION

A standard grouping of these designations will be used throughout. The first element in the group will be size expressed in numerals; the second element will be the one, two, three or four position letter code describing kind, lining and coating; and the third element will be the year of installation, again in numerals.

## EXAMPLES

6A53 - 6" I.D. Asbestos Cement installed in 1953

16SMPP78 - 16" I.D. Steel Pipe mortar lined and polypropylene coated installed in 1978
