Hi Dave,

Thank you for your assistance in getting this case moving. I recall we had discussed this. The additional boring location was approved in our February letter and to use the EPA's RSLs for ethylene glycol.

Please proceed with the work.

Feel free to contact me if you have additional questions.

Regards,
Keith Nowell

Hi Keith, just checking in with you on this. We were asked to submit a revised soil boring location map adding a boring near the end of the storm drain which we did.

Then I questioned what screening level for ethylene glycol should be used. Seems like except for the additional boring everything was approved in the December 15, 2016 workplan.

Please let me know the status of this approval. Thanks, Dave
