Subject: Quarterly Summary Report of Fill Activities for the Busch Pit
Former Hanson Aggregate Facility
3000 Busch Road
Pleasanton, California

Dear Mr. Wickham:

This letter was prepared to inform you that approximately 325,000 cubic yards (cy) of new fill was placed and compacted in Busch Pit during the second quarter period, between 4/1/13 and 6/30/13. The borrow source was from a nearby onsite soil stockpile, which was previously sampled, analyzed, and reported in a document titled "Environmental On-Site Stockpile Sampling Results, Former Hanson Aggregate Facility, 3000 Busch Road, Pleasanton, California," prepared by Haley & Aldrich, dated 17 July 2012. The 17 July 2012 report was submitted to Alameda County Environmental Health (ACEH) on 23 July 2013 and ACEH issued a response letter titled "Soil Sampling Results for Backfilling Activities at the Busch Pit, SLIC Case RO0002952 and GeoTracker Global ID SL0600101555, Hanson Aggregate Radum Plant, 3000 Busch Road, Pleasanton, CA 94566," which indicated that ACEH had no objection to the use of the material as backfill material within the Busch Pit.

During the grading activities, Haley & Aldrich personnel provided on-site monitoring for unacceptable material and performed periodic geotechnical compaction testing services. During the second quarter period, no unacceptable material was identified in the fill and all material from the onsite stockpile (with the exception of the surficial soil, which contained excessive plant material) was found to be acceptable for use as fill in Busch Pit.

Additional fill will be placed and compacted within Busch Pit during the upcoming third quarter period to complete the site grading activities. This work will use the same onsite source material. Upon completion of the site grading activities, a final report will be prepared which contains an as-built plan and a summary of our field observations and site activities.
