SITE SPECIFIC HAZARDOUS WASTE MANAGEMENT PLAN

TO REVIEWER OF DOCUMENTS:

May 28, 2008

The following work procedures will be used for the Hazardous Waste Management Plan of contaminated soil with diesel fuel located on the vacant lot of Pullman Street and Preston Avenue, Livermore CA. This plan is for clean up of the contaminated soil for NICA Demolition, 101 No. Greenville Road, Livermore, CA 94550.

VARIOUS AREAS: HAZ WASTE MANAGEMENT PLAN

- a. The hazardous wastes associated with the work is limited to removal of soil contaminated with diesel fuel.
- b. The maximum estimated quantity of contaminated soil is approximately 106 cu yds. This is based on digging down to a depth of 1' around perimeter of the affected area which contains and area of 63'x35' & 22'x31'. The minimum estimated quantity of contaminated soil is approximately 40 cu yds. and this would just encompass digging down to a depth of 1' around the immediate visibly affected areas. Soil remediation will continue until no visibly contaminated soil is attained. Contents of the affected soil include a gravel top base of 4", an asphalt sub base of 3" and 5" of soil.
- c. R.B. Construction, Inc. will be storing the excavated soil onsite in a demarcated area, lined with two layers of 6 mil poly sheeting to await sampling & profiling of contaminated soil. Upon completion of profiling data, the sampling data will dictate which landfill the material will go to for disposal. At this time we will assume that soil will be heading to a Class I landfill which will be Chemical Waste Management Kettleman Hills disposal facility located @ 35251 Old Skyline Avenue, Kettleman City, CA 93239. The EPA ID# for the facility is CAT000646117. If the soil is determined to be Class II, the treatment/disposal facility is either 1) Altamont Landfill, 10850 Altamont Pass Road, Livermore, CA 94550, Ph: (925) 449-6349, EPA ID#: CAD981382732 or 2) NWS Hay Road Landfill, 6426 Hay Road, Vacaville, CA 95687, Ph: (707) 451-3276, EPA ID#: CAD982042475.
- d. All soil will be excavated by NICA Demolition and will be supervised by Hazwoper trained personnel from R.B. Construction, Inc.
- e. Waste handling equipment will include 6 mil poly liners and covers, Tyvek type coveralls, rubber gloves and proper respiratory equipment if needed.
- f. Please see our attached general Site Safety & Health Plan for hazardous materials removal.
