Description:	Chevron site near closure		

Thanks Karen. A copy of the latest report would be great – my address is below. When you do request closure, please copy me on that as well. Also, let me know when you will need to come on our site to abandon the wells so that I can communicate that with the property. Thanks for your help.

Hi Liz,

Mark Lafferty passed on your email to me. I'm managing the site you asked about. We are still monitoring the wells. The site is in a portfolio of sites close to closure and we will be requesting closure for this case soon.

I can send you a copy of the most recent quarterly monitoring report. Is there anything else you'd like?

Karen

Karen,

This should be one of your sites. Could you respond to Liz?

Thanx.

Subject: Chevron 9-1924

Mark,

You may not be the correct project manager for this site; if not could you help me get in contact with the correct one?

7/7/2004

Historically, Chevron was performing monitoring and sampling activities at Chevron site 9-1924, located at 4904 Southfront Road, Livermore, CA. Chevron's monitoring and sampling activities included offsite wells located on a former BP (now Tosco / ConocoPhillips) site 11128, located at 4707 1st Street, Livermore, CA. The last report we have for this site is 2nd quarter 1999. Is Chevron still performing M&S work out here? Are Chevron's wells on the former BP site still there? I am trying to get the current status on the site. Let me know if you can help. Thank you!

Liz Sewell
