Paul and Gary,

Thank you for the opportunity to discuss the status of the subject case today. ACEH is pleased with the results of the recent sampling and the progress of the case. When we discussed the next step consisting of the comprehensive round of air sampling, it was with the understanding the fans to the suites would remain on. As noted in HERO Note #5, EPA Region 9 recommends indoor air sampling with the HVAC off for a period of 36 hours. Following the current round of proposed sampling, please consider conducting indoor air sampling with the fans off. We can discuss this when reviewing the results of the next round of indoor air sampling.

Please keep ACH informed with regard to the sample collection scheduling.

Regards,
Keith Nowell
