

5/20/2016 Phone Log- RO2981 Red Hanger Kleaners, 6235-6239 College Ave., Oakland

Duration: Approximately 10 minutes

Received a phone call from Paul King of P&D Environmental this afternoon regarding speaking with an occupant of the RH building. Mr. King said that a Mr. Mike Paxton contacted him complaining of health issues and that they may be related to P&D's activities at the site. Mr. King was in contact with his field staff who said there were detectable VOCs from the PID screening of soil cuttings and work space air. Mr. King indicated they were using a remote access rig and the rig's engine was outside the building. Mr. King expressed a possibility that Mr. Paxton was smelling fumes from the engine exhaust.

Mr. King stated they were encountering drilling refusal at 15 feet caused by 7-inch-diameter sub-rounded cobbles near the B of A, and that another location in the same vicinity hit refusal at 16 feet. Mr. King thought the cobbles may be part of an alluvial fan.
