Phone call with Kyle Flory and Gary Thomas of PES. A concrete pad will be installed in area of former red-stained soil next week. They would like to move forward with sampling without a work plan. I indicated that they can move forward without a work plan and our approval but it might mean that they would need to go back out for sampling after we review the data. If they go through work plan process, they can get our buy in but would then have to core through concrete. They want to move forward with the sampling. I suggested they collect samples from more than one depth and then hold the samples for future analysis. For the perimeter of the excavation, they were planning on one sample per sidewall. I indicated a spacing no more than 30 feet would be more appropriate. They are planning to send me a map of sampling locations next week.
