Subject: Geotechnical Boring at 540 Cleveland Ave

Per our conversation on the phone today, please refer to this letter in regards to our scope to be performed on March 3rd 2016. To assist with the design of the new development for the site at 540 Cleveland, I am working with Mike Wilson of Wreco to provide a full geotechnical report for the site. To generate this report Wreco will require test borings at three locations significant to the structural design, and one soil probe to determine depth of bedrock on site. I am attaching a site plan indicating approximate locations of borings to be drilled. Soil samples will be taken for the purpose of the geotechnical report. Any other disturbed soils in the form of drill cuttings will stay on site in 55 gallon drums. Per ACWD requirements all test holes will be grouted to their full depths with neat cement grout. I understand that the site has a history of contaminants in the ground. I have read the Site management plan prepared by Ninyo and Moore dated July 28th 2015 and our actions onsite by Overaa or Wreco will be performed in accordance with these guidelines. If you have any questions or concerns please feel free to contact me on my cell phone at (510) 719 0243.

Cc:Mike Wilson
