Received and then return call to Chris Larsen (Ninyo & Moore, 510-633-5640). He said that Las Positas School District is interested in purchasing the property and that they will be conducting a Phase II Investigation by the end of this year. He looked at both investigations conducted at the site and noticed that concentrations in the most recent investigation were much lower due to the use of silica gel cleanup and the only solvent contamination remains prevalent near the sump located at the site.

I told Chris that I haven't looked at that report yet since it was submitted 11/30/2010 (yesterday) but I will look at the report in the near future. Chris asked if I had any areas of interest at the site before they conduct the work. I told him that my concerns, at this time, would be to justify the use of silica gel cleanup and determine whether significant organic matter is present in the site soils. Chris said that he would look into that and would submit a copy of the report to ACEH.
